Dallas-Fort Worth High-Speed Transportation Connections Study Summary of January 2021 Public Meetings

Wednesday, January 27, 2021 at noon

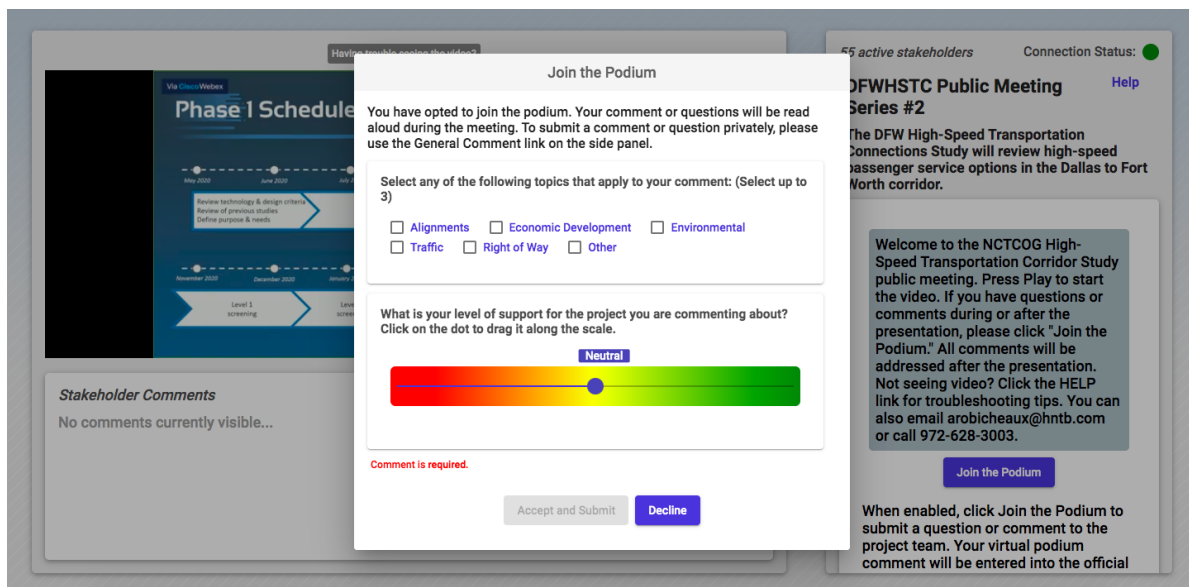

Thursday, January 28, 2021 at 6:00 p.m.

Via Public Information Management Application and Telephone Town Hall Services

The North Central Texas Council of Governments (NCTCOG) held two public meetings as part of the Dallas-Fort Worth High-Speed Transportation Connections Study. The first was on January 27, 2021, from noon to 1:00 p.m. Central Standard Time (CST), and the second was on January 28, 2021, from 6:00 p.m. to 7:00 p.m. CST. The public meeting purpose was to provide a study overview and update, including the technology and alignment types considered at the outset of initiative, the alignments and technologies recommended to be analyzed in Level 3, and to receive input and comments on the study information provided.

Due to the ongoing COVID-19 pandemic, the meetings were held virtually rather than in-person. The virtual meetings allowed for the observation of social distancing requirements while maintaining the overall study schedule and gathering input at the appropriate point in the study process. Individuals could participate in the live public meetings either online through the Public Information Management Application (PIMA) or by telephone through a Telephone Town Hall service. Figure 1 is a PIMA screenshot during the live meeting. Additional screenshots can be found in Appendix A. Instructions for joining the meeting were posted online and in all meeting notices, and are included in Appendix B.

Figure 1. Public Information Management Application (PIMA) with Join the Podium

NCTCOG published notices of the public meetings in both community news outlets and local newspapers of record. Print advertisements, translated into the language used by each outlet, are listed in Table 1. Documentation of the print advertisements is in Appendix B.

<i>Trẻ Dallas</i>	Vietnamese	1/21/2021

A news release describing the meetings and study, included in Appendix B, was distributed by NCTCOG on January 21, 2021 to all local media outlets. Flyer meeting notices, in English and Spanish, were emailed to 3,042 community members and stakeholders on January 15, 2021. Postcard meeting notices were mailed to 3,705 community members and stakeholders on January 20, 2021. Graphics raising awareness of the public meetings and describing the process for joining the public meetings were posted on NCTCOG Transportation Department’s social media channels. The social media graphic posted January 20, 2021 by NCTCOG is shown in Figure 2. Other graphics, accompanying text, and analytics regarding the public meeting are included in Appendix B. The email flyer, postcard, email contact list, and mail contact list are found in Appendix B.

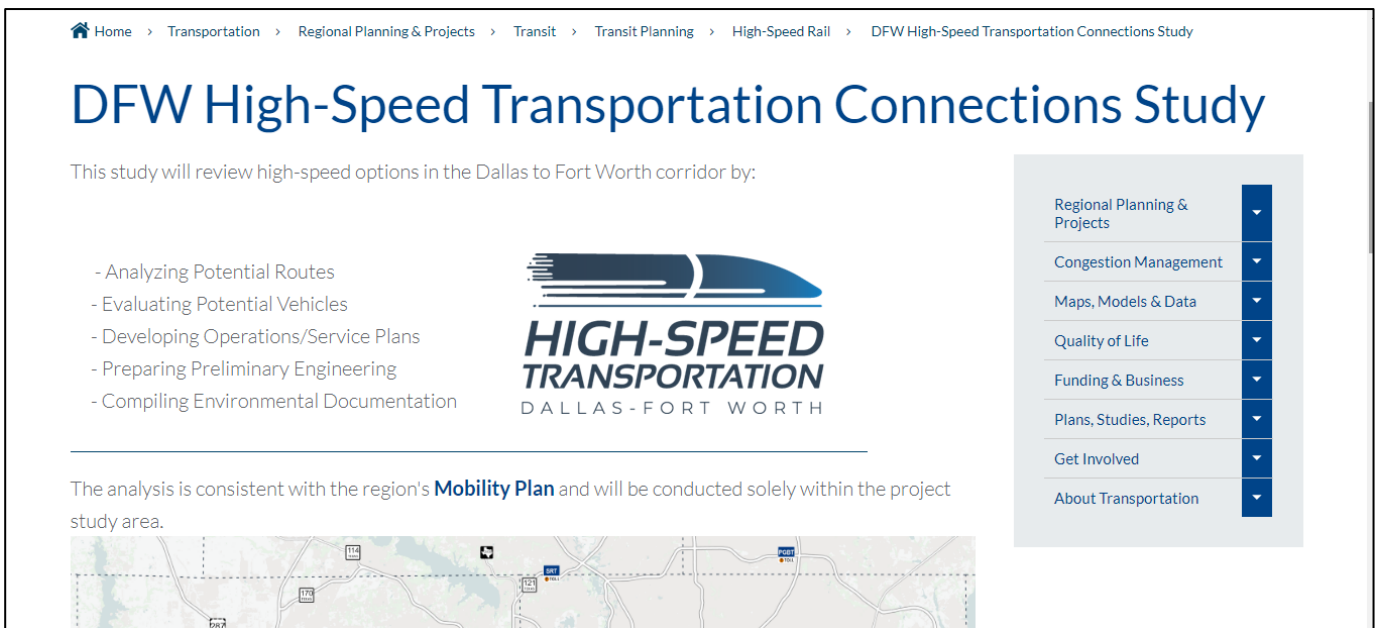

Figure 2. Social Media Graphic and Accompanying Text

In addition to information about the public meetings, handouts describing the study were posted on the study website January 22, 2021. The handouts were a map illustrating the alignments considered in the study and the revised study purpose and need, in English and Spanish. A project timeline is also on the study website indicating periods of community engagement. Additionally, documents with general information regarding the study; facts on high-speed transportation technology; evaluation criteria used to assess alternatives; and frequently asked questions about the study were posted on the study website. All handouts were posted in English. The study flyer, technology facts, and evaluation criteria were translated and posted in Spanish.

The presentation given at the meeting was prerecorded and posted on the study website on January 22, 2021. The prerecorded presentation was also posted in Spanish. This allowed individuals to review the material at a time and place convenient for them, adding an additional opportunity for input to those individuals who could not participate in the live virtual public meeting. Figure 3 is a screenshot of the study website where the study information was posted. The prerecorded presentation also allowed individuals who planned to participate in the live public meeting to review the presented information in advance, giving them more time to evaluate study materials.

Figure 3. DFW High-Speed Transportation Connections Study Website

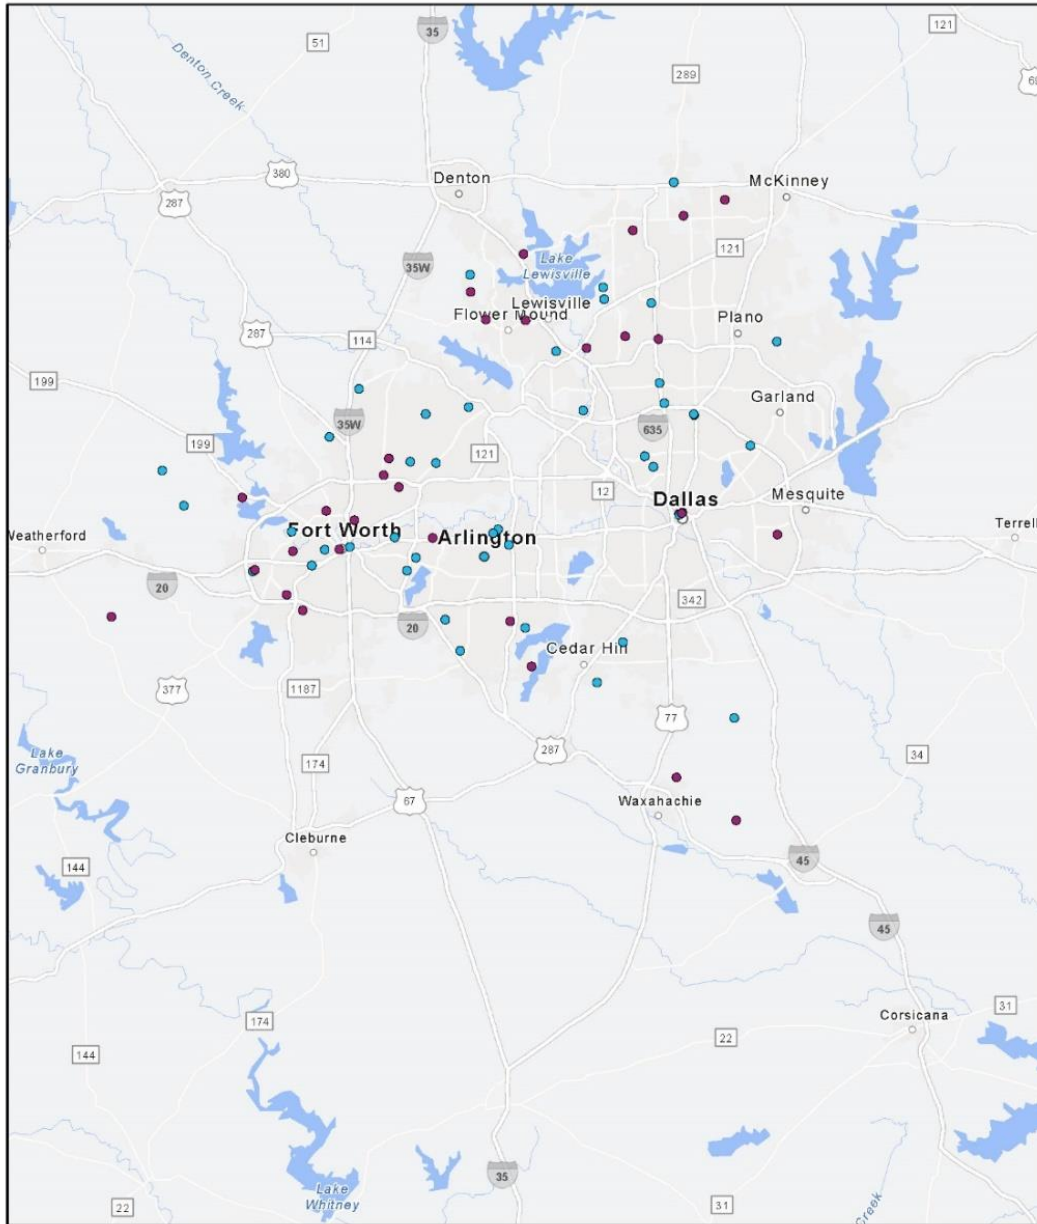

Individuals were offered reasonable accommodations, including translation services, in all public meeting notifications. Individuals without internet access could hear the presentation and comment by calling in through Telephone Town Hall services. Comments are organized in a comment/response table in Appendix C. Individuals also had the option to request printed copies of the presentation and handouts. NCTCOG did not receive any requests for accommodations or translations. As requested by community members, three printed copies of the study materials were mailed. A copy of the presentation visuals is in Appendix D.

Michael Morris (NCTCOG), Kevin Feldt (NCTCOG), Rebekah Hernandez (NCTCOG), Christopher Masters (HNTB), and Ian Bryant (HNTB) presented during the live public meetings. Transcripts of both meetings are in Appendix E. The presentation was live streamed on YouTube and the meeting was facilitated through PIMA. On January 27, 2021, 107 people attended this session of the live public meeting. One person

participated through Telephone Town Hall and 106 people participated through PIMA. Two elected officials, Commissioner Gary Fickes of Tarrant County and Mayor Michael Evans of the City of Mansfield, were in attendance. On January 28, 2021, 71 people attended this session of the live public meeting. Eight people participated through Telephone Town Hall, and 63 people participated through PIMA. Two elected officials, Deputy Mayor Pro Tem Tito Rodriguez of North Richland Hills and Councilmember Richard Grady of the City of Plano, were in attendance. Figure 4 is a map of live meeting participation zip codes and a complete list of live meeting participants is included in Appendix F.

DFWHSTC Public Meeting
Series #2

The public comment and review period for this public meeting was January 22 through February 22, 2021. The comment period began when presentations and handouts were posted on the study website. The study was discussed at the NCTCOG February Public Input Meeting on February 8, 2021. Thus, the public comment and review period for this meeting was extended through March 9, 2021 to allow for those participating in the public meeting to review and comment on this study. One comment was received through the general online comment form before the comment period. A total of 54 comments were received during the public review and comment period. Four were received before the live meeting (during the comment period) by email and through the general online comment form. Thirty-three comments were received through the PIMA podium, the platform for submitting written comments in real time during the live meeting. Illustrations (screenshots) of the PIMA podium feature are in Appendix A. Three were collected during the live meeting through the general online comment form. One comment was received through Telephone Town Hall during the live meeting. Eleven comments were collected after the live meetings—five through email, four by the general online comment form, one by mail, and one by telephone. Table 2 is a summary of comments by topic, also indicating when and how the comments were received. All comments and responses are organized in a comment/response table in Appendix C.

Table 2. Summary of Comments by Topic

DFW HIGH-SPEED TRANSPORTATION VIRTUAL PUBLIC MEETINGS

Wednesday, January 27th 2021 | noon

Thursday, January 28th 2021 | 6 pm

1/27 12:00 PM: (855) 756-7520 Ext. 70384#

1/28 6:00 PM: (855) 756-7520 Ext. 70385#

To watch online, visit nctcog.org/dfw-hstcs

To pre-register for one of the meetings, email hst_dfw@nctcog.org or call 817-695-9240 and provide your phone number as well as which date you plan to attend. Presentation materials will be posted for review on January 22 at www.nctcog.org/dfw-hstcs. Presentation information will be the same at both meetings.

WE WANT YOUR INPUT!

NCTCOG is scheduling virtual public meetings to receive comments on the Dallas-Fort Worth High-Speed Transportation Connections Study. This study is evaluating high-speed transportation options, both potential routes and transportation modes, to modernize and enhance mobility between Dallas and Fort Worth.

For special accommodations due to a disability or for language translation, contact 817-695-9240 or HST_DFW@nctcog.org. Para ajustes especiales por discapacidad o para interpretación de idiomas, llame al 817-695-9240 o por email a HST_DFW@nctcog.org. Se harán las adaptaciones razonables.

DALLAS-FORT WORTH HIGH-SPEED TRANSPORTATION CONNECTIONS STUDY VIRTUAL PUBLIC MEETINGS JANUARY 27 & 28

North Central Texas Council of Governments <do-not-reply@nctcogoutreach.org>

Fri 1/15/2021 3:33 PM

DFW High-Speed Transportation Connections Study

DALLAS-FORT WORTH HIGH-SPEED TRANSPORTATION CONNECTIONS STUDY VIRTUAL PUBLIC MEETINGS

The North Central Texas Council of Governments (NCTCOG) is seeking public opinion on the Dallas-Fort Worth High Speed Transportation Connections Study, which is evaluating high-speed transportation options, both potential routes and transportation modes, to modernize and enhance mobility between Dallas and Fort Worth.

[Staff will provide a brief overview of the study and evaluation process during virtual public meetings on Wednesday, January 27 at noon and Thursday, January 28 at 6 pm.](#)

High-speed service between Dallas and Fort Worth would potentially connect to a separate high-speed rail service between Dallas and Houston as well as from Fort Worth to South Texas metro areas. The study area includes **Dallas and Tarrant counties** as well as high-speed transportation service in the cities of Dallas, Irving, Cockrell Hill, Grand Prairie, Arlington, Pantego, Dalworthington Gardens, Hurst, Euless, Bedford, Richland Hills, North Richland Hills, Haltom City, and Fort Worth.

REUNIONES PÚBLICAS VIRTUALES

DFW HIGH-SPEED TRANSPORTATION REUNIONES PÚBLICAS VIRTUALES

Miércoles, 27 de enero de 2021 | mediodía

Jueves, 28 de enero de 2021 | 6 pm

EL ESTUDIO DALLAS TO FORT WORTH HIGH SPEED TRANSPORTATION CONNECTIONS: REUNIONES PÚBLICAS VIRTUALES

La información se publicará en línea en www.nctcog.org/dfw-hstcs para revisión y comentario público del 22 de enero al 22 de febrero del 2021. Para solicitar copias impresas de la información, llame al 817-695-9240 ó envíe un correo electrónico a DFW_HST@nctcog.org.

El Consejo de Gobiernos del Norte de Texas Central (NCTCOG, por sus siglas en inglés) está solicitando opinión pública sobre las conexiones de transporte de alta velocidad y dónde deben operar en la región de Dallas-Fort Worth. El personal dará un resumen acerca del estudio de conexiones de transporte de alta velocidad Dallas-Fort Worth y los resultados de las dos primeras rondas de análisis los cuales serán presentados durante las reuniones públicas virtuales el miércoles, 27 de enero al mediodía y el jueves, 28 de enero a las 6 pm.

El servicio de alta velocidad entre Dallas y Fort Worth conectaría potencialmente a un servicio ferroviario de alta velocidad de alta velocidad independiente entre Dallas y Houston, así como desde Fort Worth hasta las áreas metropolitanas del sur de Texas. El área de estudio incluye los condados de Dallas y Tarrant, así como el servicio de transporte de alta velocidad en las ciudades de Dallas, Irving, Cockrell Hill, Grand Prairie, Arlington, Pantego, Dalworthington Gardens, Hurst, Euless, Bedford, Richland Hills, North Richland Hills, Haltom City y Fort Worth.

NCTCOG Hosting Virtual Meetings To Discuss High-Speed Transportation Jan. 27-28

Residents encouraged to participate in study of potential technologies that could transform how they move throughout North Texas

Jan. 21, 2021 (Arlington, Texas) — North Texans have two opportunities in January to learn and comment about the ongoing study of high-speed transportation in Dallas-Fort Worth.

The North Central Texas Council of Governments has scheduled virtual public meetings for noon Wednesday, Jan. 27, and 6 p.m. Thursday, Jan. 28 to allow residents a chance to learn more about the study and provide input to planners. The study is evaluating high-speed transportation alternatives to modernize and enhance travel between Dallas, Arlington and Fort Worth. The effort outlines potential transportation choices to accommodate the expected population growth from 7.5 million today to more than 11 million by 2045.

Among the options are traditional high-speed rail, magnetic levitation trains and hyperloop technology. High-speed transportation would reduce congestion on the region's roadways and decrease travel time between Dallas and Fort Worth. The technology selected will offer a connection to other planned high-speed transportation systems, eventually linking passengers to regions such as Houston and South Texas.

The public meeting presentation may be viewed at www.nctcog.org/dfw-hstcs. Residents without access to the internet may call 855-756-7520 (toll-free) during the meetings to listen and weigh in. Those choosing the call-in option should use extension 70384# Jan. 27 and extension 70385# Jan. 28. Comments and questions can be submitted before or after the public meeting by email at hst_dfw@nctcog.org or online at www.nctcog.org/dfw-hstcs.

Comments received between Jan. 22 and Feb. 22 will be considered and included as part of the official Public Meeting Record. Comments received after Feb. 22 will be considered but will not be included in the official record. Presentations will be the same for both meetings and be posted a week before the meeting on the project webpage. For printed copies, email hst_dfw@nctcog.org.

This is the second round of public meetings on this study, which is examining an area that includes Dallas and Tarrant counties, as well as the cities of Dallas, Irving, Cockrell Hill, Grand Prairie, Arlington, Pantego, Dalworthington Gardens, Hurst, Euless, Bedford, Richland Hills, North Richland Hills, Haltom City and Fort Worth. NCTCOG hosted two virtual meetings in September.

Details	
What:	High-Speed Transportation Connection Study Virtual Meetings
When:	Noon Jan. 27, 2021
When:	6 p.m. Jan. 28, 2021
How to Participate:	Watch online at www.nctcog.org/dfw-hstcs or call 855-756-7520. Use extension 70384# Jan. 27 and extension 70385# Jan. 28.

About the North Central Texas Council of Governments:

NCTCOG is a voluntary association of local governments established in 1966 to assist local governments in planning for common needs, cooperating for mutual benefit, and coordinating for sound regional development. NCTCOG’s purpose is to strengthen both the individual and collective power of local governments and to help them recognize regional opportunities, eliminate unnecessary duplication, and make joint decisions.

NCTCOG serves a 16-county region of North Central Texas, which is centered in the two urban centers of Dallas and Fort Worth. Currently, NCTCOG has 238 member governments including 16 counties, 169 cities, 22 school districts and 31 special districts. For more information on the NCTCOG Transportation Department, visit www.nctcog.org/trans.

About the Regional Transportation Council:

The Regional Transportation Council (RTC) of the North Central Texas Council of Governments has served as the Metropolitan Planning Organization (MPO) for regional transportation planning in the Dallas-Fort Worth area since 1974. The MPO works in cooperation with the region’s transportation providers to address the complex transportation needs of the rapidly growing metropolitan area. The Dallas-Fort Worth metropolitan area includes Collin, Dallas, Denton, Ellis, Hood, Hunt, Johnson, Kaufman, Parker, Rockwall, Tarrant and Wise counties. The RTC’s 44 members include local elected or appointed officials from the metropolitan area and representatives from each of the area’s transportation providers. More information can be found at www.nctcog.org.

North Central Texas Council of Governments Hosts Virtual Meetings Discussing High-Speed Transportation

The options include traditional high-speed rail, magnetic levitation trains, and hyperloop technology

Published January 27, 2021 • Updated on January 27, 2021 at 7:43 am

North Texans have two upcoming opportunities to learn about and contribute to the study of high-speed transportation in Dallas-Fort Worth.

The North Central Texas Council of Governments is hosting virtual public meetings at 12 p.m. on Wednesday and 6 p.m. on Thursday, allowing residents to learn more about the Dallas-Fort Worth High Speed Transportation Connections Study and provide input to planners.

According to the North Central Texas Council of Governments, the study evaluates high-speed transportation alternatives to modernize travel between Dallas, Arlington, and Fort Worth.

Dallas Public Library Bundles Laptops With Hotspots to Get Residents Online

The transportation choices aim to accommodate the expected population growth from 7.5 million today to more than 11 million by 2045, the North Central Texas Council of Governments said.

The options include traditional high-speed rail, magnetic levitation trains, and hyperloop technology.

High-speed transportation would reduce congestion on North Texas roadways and decrease travel time between Dallas and Fort Worth, the North Central Texas Council of Governments said.

According to the North Central Texas Council of Governments, the technology selected will connect to other planned high-speed transportation systems, eventually linking passengers to regions such as Houston and South Texas.

The public meeting can be viewed at www.nctcog.org/dfw-hstcs.

Residents without internet access can call 855-756-7520 during the meetings to listen and contribute. Those choosing to call in should use extension 70384# on Wednesday and extension 70385# on Thursday.

Comments and questions can be submitted before or after the public meeting by email at hst_dfw@nctcog.org or online at www.nctcog.org/dfw-hstcs.

According to the North Central Texas Council of Governments, comments received between Jan. 22 and Feb. 22 will be considered and included as part of the official Public Meeting Record, while comments received after Feb. 22 will be considered but not be included in the official record.

The presentations will be the same for both meetings, and they will be posted before the meeting on the project webpage. For printed copies, email hst_dfw@nctcog.org.

This is the second round of public meetings on this study, which examines an area that includes Dallas and Tarrant counties, as well as the cities of Dallas, Irving, Cockrell Hill, Grand Prairie, Arlington, Pantego, Dalworthington Gardens, Hurst, Euless, Bedford, Richland Hills, North Richland Hills, Haltom City, and Fort Worth.

The North Central Texas Council of Governments hosted two similar virtual meetings in September.

High-speed railway through The Metroplex in discussion, potential stop near UTA

By [Kevin Landrum](#), [The Shorthorn staff](#)
Jan 28, 2021

The Trinity Railway Express pulls into Bell Station on Jan. 28 in Hurst, Texas. The commuter rail line began operations in December 1996.

[Photo by Peyton C. North](#)

The North Central Texas Council of Governments discussed a high-speed railway study for transportation to and from Dallas, Fort Worth and Arlington during a virtual meeting Thursday.

Possible routes for the proposal, titled “DFW High-Speed Transportation Connections Study,” include Interstate 30 and State Highway 180. The council plans for three stops on the route: Downtown Fort Worth, Downtown Dallas and a midpoint stop in Arlington.

If the SH180 route, which becomes Division Street upon entering Arlington, meets the criteria currently being evaluated, the high-speed railway could potentially make a stop just north of UTA.

The study, a 36-month long initiative that began in May, is currently incorporating public feedback before moving to its next level of research. That next level will survey the recommended routes and potential designs that best meet criteria such as environmental impact, community facilities, travel time and technology.

Future plans for the high-speed project would include routes from Downtown Dallas to Houston, routes from Fort Worth to Austin, San Antonio and Laredo, and commuter routes from Arlington to DFW International Airport.

Ongoing plans estimate another two years of drafting and discussion.

Additional public meetings for the project are tentatively scheduled for this spring and fall. Further details regarding the project and meeting information can be found on the council’s [website](#).

INMIGRACIÓN

Un camino a la ciudadanía para muchos

Propuesta de reforma migratoria ayudaría a dreamers, tepeianos e indocumentados

ASSOCIATED PRESS

Washington — El presidente electo Joe Biden planea presentar un amplio proyecto de ley sobre inmigración el primer día de su administración, con la esperanza de proporcionar un sistema que daría la ciudadanía luego de ocho años a aproximadamente 11 millones de personas que viven en Estados Unidos sin estatus legal.

La legislación es parte de la promesa que Biden hizo a votantes latinos y de otras comunidades de inmigrantes, luego de cuatro años de políticas restrictivas y deportaciones masivas ordenadas por el presidente Donald Trump.

El plan proporcionaría una vía rápida hacia la ciudadanía para quienes viven sin estatus legal, y no incluye provisiones sobre seguridad fronteriza, algo que favorecen muchos republicanos, lo que hace que la aprobación en un Congreso estrechamente dividido sea dudoso.

Se espera que el proyecto sea presentado después de que Biden preste juramento al cargo el miércoles, según una persona familiarizada con la legislación y a quien se le concedió el anonimato.

El plan de reforma migratoria del nuevo presidente Joe Biden brindaría una vía hacia la ciudadanía para dreamers, inmigrantes con TPS y personas sin estatus legal.

mato.

Como candidato, Biden calificó las acciones de Trump sobre la inmigración como un “ataque implacable” a los valores estadounidenses y dijo que

“sanaría el daño” sin dejar de mantener la vigilancia fronteriza.

Según la legislación, aquellos que vivan en Estados Unidos a partir del 1 de enero de 2021 sin estatus legal ten-

drían un camino de cinco años hacia un estatus legal temporal, o la residencia permanente, si aprueban un verificación de antecedentes, pagan impuestos y cumplen con otros requisi-

tos básicos. A partir de ahí, es un camino de tres años hacia la naturalización, si deciden buscar la ciudadanía.

Para algunos inmigrantes, el proceso sería más rápido. Los llamados Dreamers —jóvenes que llegaron ilegalmente a Estados Unidos cuando eran niños— así como los trabajadores agrícolas y las personas bajo estatus de protección temporal podrían tramitar su residencia más rápido si están trabajando, están en la escuela y cumplen con otros requisitos.

El proyecto de ley no es tan completo como la última gran reforma migratoria propuesta cuando Biden fue vicepresidente durante la administración Obama.

Por ejemplo, no incluye incrementar la seguridad fronteriza, sino que exige la elaboración de estrategias. Tampoco crea ningún nuevo trabajador invitado u otros programas de visas.

Se espera que Biden tome acciones ejecutivas rápidas para revertir otras acciones de inmigración de Trump, incluido el fin de la prohibición de viajes de varios países predominantemente musulmanes.

Durante las primarias demócratas, Biden nombró constantemente la acción de inmigración como una de sus prioridades en su “primer día” en la Casa Blanca, señalando la gama de poderes ejecutivos que podría invocar para revertir las políticas de Trump.

CORTESÍA CARIDADES CATÓLICAS

Caridades Católicas reanudaron sus servicios presenciales en septiembre. El último taller a gran escala de la organización fue en la iglesia San Juan Diego, donde asistieron alrededor de 100 personas, que buscaban naturalizarse.

Esperan trato más humano

Caridades Católicas y AHM preparan a la comunidad para posibles cambios migratorios

Por CARMINA TISCAREÑO/AL DÍA

Con protectores de plexiglás en los escritorios y atendiendo a clientes en espacios más grandes, Caridades Católicas ha podido reanudar sus servicios de inmigración en persona en medio de la pandemia.

El reto para el personal de los Servicios Legales de Inmigración en Caridades Católicas era mantenerse a ellos mismos libres de un contagio de covid-19 pero a la misma vez seguir ayudando a la comunidad indocumentada del Norte de Texas.

Carolina Rivera, abogada supervisora de Caridades Católicas, dijo que la administración de Donald Trump estableció políticas que fueron en detrimento de sus clientes.

“Esperamos un trato más humano de los solicitantes de asilo y de los inmigrantes (con la administración de Joe Biden)”, dijo la abogada.

Rivera dijo que también esperan ver el fin del Tribunal de Protocolos de Protección de los Migrantes, cambios a las normas con respecto a la carga pública y un aumento en el límite de las visas H-1B (trabajadores) y U (víctimas de crimen).

El equipo de los Servicios Legales de Inmigración frecuentaban parroquias de la Diócesis Católica de Dallas para informar a los feligreses sobre cambios migratorios y los servicios que ofrecen en Caridades Católicas, pero por la pandemia estos esfuerzos han estado pausados.

“Por el momento estamos en el boletín de noticias, y en comunicación con los sacerdotes para que les informen a los feligreses que aún estamos aquí y listos para ayudar”, dijo Rivera.

El último taller a gran escala de Caridades Católicas fue en septiembre, donde asistieron alrededor de 100 personas, que buscaban naturalizarse. Los clientes esperaban su turno dentro su vehículo, y antes de ser atendidos se les tomaba la temperatura y tenían que contestar un cuestionario de salud.

En fotos, se pueden ver mesas colocadas en las afueras de la iglesia San Juan Diego, y protectores de plexiglás, que separaban al personal de sus clientes.

Fue ese mismo mes que el personal regresó a las oficinas para poder ayudar a sus clientes de manera presencial. Otros talleres tienen una capacidad de 20 personas, pero por el momento no tienen ninguno planeado, explicó Rivera.

Otro grupo que se está preparando para las nuevas normas de inmigración es la Alianza Hispana Evangélica Ministerial (AHM). Desde julio, AHM se ha estado reuniendo en persona para educar a los pastores sobre las nuevas oportunidades de legalización. Los pastores que atienden esos foros después informan a sus congregaciones sobre lo nuevo en leyes de inmigración.

Lynn Godsey, pastor y fundador de AHM, dijo en una llamada telefónica que los foros son para que las familias indocumentadas empiecen a preparar los documentos requeridos para la naturalización. El pastor predice que el 2021 va ser el año en que los inmigrantes se van a “superar y arreglar papeles”.

En un foro organizado junto con Proyecto Inmigrante el 11 de enero, Godsey y Douglas Interiano, el director de Proyecto Inmigrante, informaron a más de 15 pastores y líderes sobre las nuevas oportunidades de legalización y cómo preparar a las familias para estas normas.

Juntar documentos como el acta de nacimiento puede tomar semanas o meses y es importante que los inmigrantes no se esperen para cuando las nuevas normas migratorias sean anunciadas, ellos ya están listos, explicó Godsey.

“Millones [de personas] podrán beneficiarse con permisos legales para trabajar, seguro social, licencia de manejar, con posibilidades de renovar hacia un camino a la residencia permanente”, escribió Godsey en una publicación de Facebook.

AHEM planea futuros foros en Fort Worth, Arlington y Dallas para seguir informando a pastores y preparar a su comunidad.

T-MEC protege a los trabajadores indocumentados

Por CHRISTOPHER SHERMAN/AP

Ciudad de México — México dijo el miércoles que invocará la sección laboral del tratado de libre comercio firmado con Estados Unidos el año pasado a fin de que sus trabajadores en Estados Unidos tengan acceso a la vacuna contra covid-19, independientemente de su estatus migratorio.

El secretario de Relaciones Exteriores de México Marcelo Ebrard indicó que “es un derecho establecido que el trabajador no debe estar expuesto al contagio”.

“Es responsabilidad de cada uno de los dos países garantizar que todos los trabajadores, independientemente de su condición migratoria, reciban la vacuna”, dijo el canciller. La exclusión de cualquier trabajador mexicano de los programas de vacunación sería considerada una violación al acuerdo comercial, recalzó.

El tema del acceso de los trabajadores migrantes a la vacuna atrajo la atención de México la semana pasada luego de los comentarios del gobernador de Nebraska, Pete Ricketts. Se le preguntó al gobernador si los inmigrantes que viven de manera ilegal en el país y trabajaban en las plantas empacadoras de carne del estado serían vacunados.

Ricketts contestó: “Se supone que debes ser un residente legal del país para trabajar en esas plantas, así que no espero que los inmigrantes ilegales formen parte de la vacuna con ese programa”.

Posteriormente, su portavoz aclaró en un comunicado que “no se requiere prueba de ciudadanía para la vacunación”.

Sin embargo, a algunos grupos de defensa de los inmigrantes todavía les preocupa que este tipo de mensajes desalienten

PATRICK SEMANSKY/AP

Donald Trump y Andrés Manuel López Obrador renovaron en 2020 el acuerdo comercial entre México y Estados Unidos.

a las personas que residen en Estados Unidos de manera ilegal.

Ebrard agregó que espera que los sindicatos estadounidenses apoyen a México en el tema. El pacto comercial entre México, Estados Unidos y Canadá, conocido como T-MEC, contiene nuevas reglas y garantías a los derechos laborales.

Roberto Velasco, director general de la cancillería mexicana de asuntos para América del Norte, señaló que “por supuesto, lo primero que vamos a hacer es que vamos a plantearlo entre cancillerías, lo vamos a plantear entre gobiernos”.

“Y si eventualmente fuese necesario instaurar un proceso en los términos que marca el tratado para reclamar la violación de una de sus reglas, sería uno de los procedimientos de los paneles”, añadió Velasco en relación a las comisiones de expertos de varios países que revisan las disputas conforme a lo establecido en el pacto comercial.

DFW HIGH-SPEED TRANSPORTATION REUNIONES PÚBLICAS VIRTUALES

27 de enero 12:00 PM: (855) 756-7520 Ext. 70384#

28 de enero 6:00 PM: (855) 756-7520 Ext. 70385#

NCTCOG está programando reuniones públicas virtuales para recibir comentarios sobre el estudio de Dallas-Fort Worth High-Speed Transportation Connections. Este estudio está evaluando las opciones de transporte de alta velocidad, tanto rutas potenciales como modos de transporte, para modernizar y mejorar la movilidad entre Dallas y Fort Worth.

Para acomodo especial por discapacidad o para traducción de idioma, contáctenos al 817-695-9240 o por HST_DFW@nctcog.org.

Para preinscribirse en una de las reuniones, envíe un correo electrónico hst_dfw@nctcog.org o llame al 817-695-9240 y proporcione su número de teléfono, así como la fecha en que planea asistir. Los materiales de la presentación se publicarán para revisión en 22 de enero www.nctcog.org/dfw-hstcs. La información de la presentación será la misma en ambas reuniones.

www.nctcog.org/dfw-hstcs

STORIES TO FOLLOW IN 2021

Ridge Road extension to include city's first multilane roundabout

In April, crews will begin work to extend Ridge Road from US 380 to Wilmeth Road. The road will be built as a four-lane divided roadway, officials said.

Work to extend the road will include the construction of the city's first multilane roundabout intersection, which will be set at Ridge and Wilmeth.

The city's master thoroughfare plan includes a framework for roadways that support growth and development, and extending Ridge Road will help improve mobility options in the fast-growing areas, McKinney Capital Improvements Manager Nicholas Ataie said in an email.

Construction is expected to take 15 months to complete and

cost \$17 million, Ataie said.

"While roundabouts are not new to the area, these larger multilane roundabouts will require some additional attention and caution by drivers to markings, signs, and to yield to nonvehicular traffic," Ataie said.

Extension of Collin McKinney Parkway to begin this spring

A project to extend Collin McKinney Parkway with a new segment is set to begin this spring, officials said. Crews will extend the road from where it terminates at Lake Forest Drive to Hardin Boulevard.

The road will be constructed as a four-lane divided roadway, McKinney Capital Improvements Manager Nicholas Ataie said. The project will also construct a bridge over Cottonwood Creek and install a new traffic signal at Hardin. The project is estimated to cost \$9 million.

ANOTHER PROJECT TO FOLLOW IN 2021

WILMETH ROAD EXTENSION

The city of McKinney will work to connect Wilmeth Road from Lake Forest Drive, where it terminates, to Hardin Boulevard. The road will be constructed as a four-lane divided roadway. The project will include construction of a bridge structure over Franklin Branch, as well as three multilane roundabout intersections at Lake Forest Drive, County Road 943 and Hardin Boulevard. The project is currently in its design phase, and construction is expected to begin this spring.

Timeline: spring 2021-summer 2022

Cost: \$19 million

Funding sources: city of McKinney, Collin County

TOP DEVELOPMENT STORY OF 2021

Redevelopment projects along US 75 to make major headway in 2021

BY WILLIAM C. WADSACK

Officials say they are optimistic about what redevelopment projects at the former sites of Collin Creek Mall and the Plano Market Square Mall mean for the city's future.

"You're seeing a real revitalization of the [US 75] corridor, and that's really exciting," Director of Special Projects Peter Braster said.

The planned redevelopment of the Plano Market Square Mall will include about 325 new apartments and town homes as well as up to 16,500 square feet of restaurant and retail space. Council Member Shelby Williams said Dec. 14 that the property is "desperately" in need of revitalization.

"[The developers] proposed something that is moderately dense," he said. "And while it's nowhere near

the same scope and scale as the Collin Creek development, I'm hopeful that they can serve as bookends of our [US] 75 corridor."

The former Collin Creek Mall property will be transformed into a \$1 billion mixed-use destination with up to 3,100 new residential units and a series of new office, restaurant and hotel buildings.

Braster said those projects, as well as the Heritage Creekside development and Texas InTown Homes' plans for First Baptist Church's historic downtown property on East 15th Street, are exciting for the city because Plano needs "more housing."

InTown Homes plans to re-purpose the church site to have 50 for-sale urban townhouses and 270 apartments with live-work units as well

Plano Market Square Mall has been largely unoccupied for years. In 2021, redevelopment of the site will commence. (Community Impact Staff)

as office, retail and restaurant space. However, Braster noted, work cannot begin until First Baptist relocates to its new home off the George Bush Turnpike later this year.

Work on the \$900 million Heritage Creekside development, located northwest of where Alma Road meets President George Bush Turnpike, is continuing, Braster said. The 156-acre,

mixed-use development is slated to include nearly 900 new housing units as well as restaurants, retail stores and an office tower district.

"A lot of our stuff is just sort of on hold [because of COVID-19]," he said. "Things like the malls [are] a little different because they're mostly empty anyway. Now is the time to do rehab or redevelop."

TOP DEVELOPMENT STORY OF 2021

Redevelopment projects along US 75 to make major headway in 2021

BY WILLIAM C. WADSACK

Officials say they are optimistic about what redevelopment projects at the former sites of Collin Creek Mall and the Plano Market Square Mall mean for the city's future.

"You're seeing a real revitalization of the [US 75] corridor, and that's really exciting," Director of Special Projects Peter Braster said.

The planned redevelopment of the Plano Market Square Mall will include about 325 new apartments and town homes as well as up to 16,500 square feet of restaurant and retail space. Council Member Shelby Williams said Dec. 14 that the property is "desperately" in need of revitalization.

"[The developers] proposed something that is moderately dense," he said. "And while it's nowhere near

the same scope and scale as the Collin Creek development, I'm hopeful that they can serve as bookends of our [US] 75 corridor."

The former Collin Creek Mall property will be transformed into a \$1 billion mixed-use destination with up to 3,100 new residential units and a series of new office, restaurant and hotel buildings.

Braster said those projects, as well as the Heritage Creekside development and Texas InTown Homes' plans for First Baptist Church's historic downtown property on East 15th Street, are exciting for the city because Plano needs "more housing."

InTown Homes plans to re-purpose the church site to have 50 for-sale urban townhouses and 270 apartments with live-work units as well

Plano Market Square Mall has been largely unoccupied for years. In 2021, redevelopment of the site will commence. (Community Impact Staff)

as office, retail and restaurant space. However, Braster noted, work cannot begin until First Baptist relocates to its new home off the George Bush Turnpike later this year.

Work on the \$900 million Heritage Creekside development, located northwest of where Alma Road meets President George Bush Turnpike, is continuing, Braster said. The 156-acre,

mixed-use development is slated to include nearly 900 new housing units as well as restaurants, retail stores and an office tower district.

"A lot of our stuff is just sort of on hold [because of COVID-19]," he said. "Things like the malls [are] a little different because they're mostly empty anyway. Now is the time to do rehab or redevelop."

Dallas Skyline Basketball Club recently relocated its headquarters to Richardson. (Courtesy Dallas Skyline Basketball Club)

FEATURED IMPACT

RELOCATION

Dallas Skyline Basketball Club moved its headquarters in October to 680 N. Glenville Drive, Richardson, in the Arapaho Business Park. The professional basketball team is scheduled to begin its second season as a member of The Basketball League, a nationwide minor professional league, in April.

Before the coronavirus pandemic ended TBL's season last March, the club played its home games at the Alfred J. Loos Fieldhouse in Addison. For the upcoming season, owner Prescott Mack said he would like the team to be able to play its games in Richardson.

"We're really hoping that The University of Texas at Dallas will welcome us—or Richland College, or any of the Richardson ISD schools," he said. "We want to not only have our headquarters here, but we want to play here as well."

The preseason training camp is slated to start March 26. Mack said he expects the team to include an even mix of players from the Dallas-Fort Worth metroplex, the nation and the world.

"We made a lot of changes during the pandemic and hired a female head coach," Mack said of Head Coach and General Manager Angela Davidson. "She's working really, really hard putting together a really good roster." www.dallas skylinebc.com

MIRANDA JAIMES/COMMUNITY IMPACT NEWSPAPER

WORTH THE TRIP

MARKET BY MACY'S

After founding a themed retail boutique in New York in 2011, Macy's Brand Experience Officer Rachel Shechtman has brought her expertise to Southlake.

Market by Macy's opened Feb. 6 in Southlake Town Square, officially making its national debut. The store was developed in partnership by Shechtman, who said Market by Macy's was designed to give people an experiential and communal way to shop.

"The way we talk about this space is [as] a social shopping space that celebrates discovery, community and convenience," she said.

Market by Macy's features an assortment of boutique clothing and home decor items, including items previously only available online. Products for men, women and children are offered.

wagering. He hasn't taken a loud position on either one; that's a legislative concern, and he's not a legislator any more.

But his unexpectedly optimistic official forecast of the state's fiscal future all but erased any urgency for new state revenues to make the next budget balance. And that urgency – or the perception of it – is the only thing that ever gets our conservative Legislature over the hump on controversial moneymaking schemes.

It's how Texas created the lottery, and how it legalized bingo and pari-mutuel wagering on dog and horse races. The need for money, combined with office-holders' congenital allergies to new taxes, overcame their historical opposition to gambling.

Some of the folks promoting casinos and marijuana sales in Texas were hoping the recession triggered by the pandemic would open legislative minds to the possibility of new ways to raise money without angering taxpayers. They're working hard. One example: 25 lobbyists have registered with

Sands in its quest to legalize casinos in the state.

Hegar's forecast turned that into a hard sell.

One way to make Texas legislators do something they don't want to do is to give them an alternative that's even worse.

They carp about increases in state spending, for instance, but they consistently vote for bigger budgets because the alternative – cutting programs their voters demand – is even more unpopular.

Who wants to get fired?

Months ago, it appeared the Texas Legislature would be in a fiscal vise during the session that started this week. State officials were talking about a big deficit in the current budget that runs through the end of August, and a shortage of money for the two-year budget that follows – the budget they'll be writing during this session.

That sent them to begin consideration of an unwritten tight-budget checklist familiar to state officials and anyone who's watched them for long.

• Reexamining current spending and cutting the

money. Those things are in the budget because somebody wanted them there.

• Polishing up the accounting tricks that balance a budget without spending money or raising taxes. An example: Delaying a \$1 billion payment from the last day of the current budget reduces spending by that amount – for this budget. Paying it the next day adds \$1 billion to the next budget, creating a problem that doesn't have to be solved for a year or two. Hold your nose if you want, but it's free and doesn't interrupt services or disturb tax rates.

• Raising taxes that either don't matter to most voters – this makes certain industries and businesses very nervous – or that voters seem to control with their own behavior. It's hard to avoid sales taxes, and most people pay them; an increase would be politically painful. But people don't have to play the lottery, or smoke cigarettes or – in the current conversation,

Answering more questions about widows benefits

YOUR SOCIAL SECURITY

TOM MARGENAU
thomas.margenau@comcast.net

Sometimes, when I write a column about a certain topic, that column seems to generate more questions than it answers. That certainly was the case with a column I wrote about widows benefits just before the holidays. Ever since, my inbox has been crammed with emails from widows or about widows. I even got some questions about benefits for widowers.

Q You wrote an interesting column about widows benefits. But you didn't say anything about widowers. So, what about us guys? Can we get anything from Social Security if our wife dies first?

A Legally, men are due the very same kind of survivor benefits as women. But practically, it doesn't happen very often. Why? Because for a variety of reasons involving higher average salaries and longer working careers, a husband's Social Security retirement benefit is almost always higher than his wife's retirement benefit. That means his potential

widowers benefit (anywhere between 70% and 100% of his wife's retirement rate) is less than his own Social Security check. That's why men rarely get widowers benefits.

But there is one big exception to that normal scenario. A man could employ the widower version of the "widow's option" explained in that prior column. For example, a guy could take widowers benefits anytime after age 60 if he's not working or after full retirement age if he's working and then, at 70, switch to about 132% of his own retirement benefit.

Q That was a good article you wrote about widows benefits. But I don't think you covered our

situation. My wife and I have very similar Social Security histories. We are both 73 years old. We both started our Social Security at age 62. I get about \$1,600 per month on my record, and my wife gets \$1,580 on her record. What will happen to our Social Security when one of us dies first?

A You do have an interesting Social Security issue. Normally, I would tell you that if the person with the higher Social Security benefit dies first, the other would get the difference in survivor benefits. In other words, if you died first, your wife would keep getting her own \$1,580, and then she would get an additional \$20 in widows benefits to take her up to your \$1,600 level. Then I would tell you that if she died first, you wouldn't get any widowers benefits because your rate is already higher than hers. But if I told you all that, I would be misleading you. Here is why.

Because both you and your wife took benefits at age 62, you are each getting

75% of your full retirement age benefit. There is a law that says a widow or widower in your situation is guaranteed to get 82% of the deceased full retirement age rate. If my little pocket calculator is right, your full retirement rate must be about \$2,110. So, 82% of \$2,110 is \$1,750. And 82% of \$2,110 is \$1,730.

So, if you die first, your wife will keep getting her \$1,580, and then she will get \$170 in widows benefits to take her up to 82% of your FRA rate. If your wife dies first, you will keep getting your own \$1,600, and then you will get \$130 in widowers benefits to take you up to 82% of her FRA rate.

Q My husband died three years ago. I was

68 at the time, and he was 70. When I called Social Security and asked about possible widows benefits, they said I was only due the small \$255 death benefit. My own Social Security is about twice as much as he was getting. But your recent column about widows benefits makes me think I am missing out. Am I?

A I hope that column didn't mislead you. You are not missing out on anything. Because your own benefit is so much higher than what your husband was getting, you are not due any widows benefits.

Q I was married to my first husband for 20 years. He died when I was 53. When I was 58, I married another man. I'm now 62. I thought I would be able to get widows benefits from my first husband. But I called Social Security, and they told me that, because I remarried before I was 60, I can't get any widows benefits. I don't understand this. I was married to him for more than 10 years. Can you help me understand this?

A Let me start with the 10-year issue you mentioned. That has nothing to do with your situation. The 10-year duration of marriage rule only comes into play in cases involving divorced wives or widows. So, you could have been married to your first husband for one year or 10 years or 30 years and it would have no bearing on your case.

What does have a bearing on your case is the fact that you are now married to another man. For years, the law had always said you must be unmarried to collect widows benefits. The thinking was this: Why should you get "dependent" widows benefits from one husband when you are married to another husband?

That was the law until sometime in the 1980s when there was a slew of news stories about sweet little old widow ladies who were "living in sin" with a man — because they knew if they officially tied the knot and got married, she would lose her widows benefits. Those news stories embarrassed

conservative members of Congress who were ashamed to admit there was a federal law that encouraged these women to "sin." They couldn't act quickly enough to change the law. So, for the last 30 years or so, the law has said that if a widow remarries after age 60, she would still be eligible for benefits from her deceased first husband.

And darn it, you remarried two years earlier, at 58. I guess Congress figured you just were not enough of a "sweet little old widow lady" at that age to warrant getting benefits from husband No. 1 while being married to husband No. 2.

If you have a Social Security question, Tom Margenau has a book with all the answers. It's called *Social Security: Simple and Smart*. You can find the book at creators.com/books. Or look for it on Amazon or other book outlets. To find out more about Tom Margenau and to read past columns, visit the [Creators Syndicate website](http://www.creators.com) at www.creators.com.

Tarrant County reports 2,155 new COVID-19 cases, 21 deaths

BY EMERSON CLARRIDGE
eclarridge@star-telegram.com

Tarrant County public health authorities on Saturday reported 2,155 additional novel coronavirus cases and 21 coronavirus deaths.

The county has reported a total of 205,329 CO-

VID-19 cases that have included 2,012 deaths and an estimated 149,827 recoveries.

The people whose deaths the authorities reported were a man from Grapevine who was older than 90, a woman from Watauga who was older than 90, a man from Fort Worth who was older than

90, a man and woman from Arlington in their 80s, a man and two women from Fort Worth in their 80s, a man from Watauga in his 80s, a woman from Watauga in her 70s, a man and woman from Fort Worth in their 70s, a man from Arlington in his 70s, a

woman from Watauga in her 70s, a woman from Mansfield in her 60s, a man from Haltom City in his 50s, a woman from River Oaks in her 50s, two men from Fort Worth in their 50s, and a woman from Fort Worth in her 30s.

Two had no underlying conditions and the others had underlying health conditions.

Thunderstorms expected to bring hail, fog, heavy winds to area

BY JACK HOWLAND
jhowland@star-telegram.com

FORT WORTH
The Dallas-Fort Worth region is expected to see another overcast day Sunday, with bursts of drizzle, before stronger storms in the night that could possibly bring hail, damaging winds and fog, according to the National Weather Service.

There's a possibility, too, of tornadoes within certain squall lines in North Texas.

It was cloudy and gray on Saturday, with a high of around 55, the weather service forecast shows. Heading into Sunday, a warm front is expected to move through the region from the south, a "slightly abnormal" circumstance in January that could lead to more humid conditions and storms, according to Matt Stalley, a weather service meteorologist.

There's a chance for slight drizzle after midnight on Sunday, according to the weather service forecast, and there will also be "widespread dense fog." A hazardous weather outlook issued by the weather service warns dense fog in areas of North Texas could reduce visibility to a half-mile at times.

This fog, the alert notes, could continue through Sunday morning and into the afternoon.

There should be mainly periods of light drizzle during the day Sunday, Stalley said. Stronger storms could occur as early as 5 or 6 p.m., he said, "but more likely it's

A HAZARDOUS WEATHER OUTLOOK WARNS THAT DENSE FOG IN AREAS OF NORTH TEXAS COULD REDUCE VISIBILITY TO A HALF-MILE AT TIMES.

gonna be probably after 9 or 10 p.m."

"There's certainly a chance that some storms could become strong or severe during that time window on Sunday night," Stalley said.

DFW residents, he advised, should check the forecast on Sunday night and make sure they have a way to receive weather warnings before they go to bed.

The hazardous weather outlook notes the main hazards on Sunday night will be large hail and heavy gusts of wind. There could also be brief tornadoes embedded in developing squall lines, according to the alert.

Stalley said this type of weather is possible anywhere across North Texas, but "I wouldn't go so far as to call it likely."

Monday is expected to be sunny, with a high of 66, according to the weather service forecast.

SETH WENIG AP

People wait in line Thursday for the COVID-19 vaccine in Paterson, N.J. The first people arrived around 2:30 a.m. for the chance to be vaccinated at one of the few sites that does not require an appointment.

Lucky few hit jackpot for COVID-19 vaccine

BY BERNARD CONDON, CANDICE CHOI AND MATT SEDENSKY
Associated Press

Fortune struck one man in the bakery aisle at the supermarket. Two others were working the night shift at a Subway sandwich shop. Yet another was plucked from a list of 15,000 hopefuls.

With millions of Americans waiting for their chance to get the coronavirus vaccine, a lucky few are getting bumped to the front of the line as clinics scramble to get rid of extra, perishable doses at the end of the day.

It is often a matter of being in the right place at the right time.

Sometimes people who just happen to be near a clinic at closing time are offered leftover shots that would otherwise be thrown away. Sometimes health workers go out looking for recipients. Some places keep waiting lists and draw names at random. Such opportunities may be becoming more prized as shortages around the U.S. lead some places to cancel vaccinations.

"One of the nurses said I should go buy a lottery ticket right now," said Jesse Robinson, outside a Nashville, Tennessee, clinic this week where the 22-year-old was picked from a 15,000-name list for a shot. "I'm not going to question it too much. Just glad it was me."

David MacMillan was grabbing ingredients for a coconut chickpea dish at a Giant grocery store in Washington when a woman in a lab coat from the in-store pharmacy came up to him and his friend. "I got two doses of the Moderna vaccine. The pharmacy is closing in 10 minutes. Do you want them?" MacMillan, 31, recalled the woman saying. "I thought, 'Let's go for it.'"

After MacMillan posted a video of his experience on TikTok, the supermarket chain was inundated for days with calls and people hanging around, hoping to score a shot.

It has become one of the most unusual quirks in the often uneven, monthlong rollout of the COVID-19

vaccines.

Once a vial is thawed from the deep freeze and, even more so, once its seal is punctured and the first dose is drawn, those administering the vaccine are in a race to use it up before it spoils — even if it means giving shots to those who don't fit into the priority list.

While it may be unsettling to see a 20-something getting a shot while a 90-year-old woman in a nursing home is still waiting, public health experts say getting a dose into someone's arm, anyone's arm, is better than throwing it away.

"As far as I'm concerned, vaccinate anyone but the dog," said Dr. William Schaffner, an infectious-disease expert at Vanderbilt University.

Hair colorist Hanna Widger was tipped off by a client about Los Angeles clinics where she might be able to get a leftover dose at the end of the day.

"It almost felt very secretive and undercover," she said. "Almost like this

shady drug deal."

She said she started crying when she received her shot: "It was almost like you've been running this marathon since March and you just finished the race. It was pretty emotional."

In New York, a rumor that the Brooklyn Army Terminal had extra doses triggered a rush to the vaccine distribution site, leading to bumper-bumper traffic in the streets and a line of hundreds on the sidewalks until police came out to say they had been duped.

Mike Schotte, 53, and his 72-year-old mother started showing up at pharmacies near their home in Hurst, Texas, in hopes of getting a leftover shot. Eventually they put their names on a waiting list and got a call saying shots might be available if they arrived within a half-hour.

"We didn't have to speed, but it was pretty close," Schotte said. "I'm excited that I got it."

Nashville started its

lottery system to avoid more haphazard ways of distributing leftover shots. In one case last month, the city's health department ended up giving extra doses to two workers at a Subway restaurant in a nearby hospital so they wouldn't go to waste.

However they get it, those who've lucked into getting a first shot are reserved a spot for a second one a few weeks later.

VIENE DE LA 1A

BARRIOS

En el 2019 Barrios registró 15 asistencias igualando con el MVP de la MLS, Carlos Vela.

Asimismo, Michael Barrios mantiene la segunda racha más larga de apariciones ininterrumpidas del club en el campo, y la quinta más larga en la historia de la MLS, con 96 consecutivas desde el 19 de junio del 2016 hasta el 4 de mayo del 2019.

Barrios jugó por el FC Dallas desde el 2015 hasta el 2020.

Pádraig Smith, vicepresidente de los Rapids, destacó las cualidades del mediocampista.

“Michael (Barrios) ha sido uno de los mejores creadores en esta liga y ofrece un ritmo vertiginoso que es muy difícil de igualar”.

Pádraig aseguró que Barrios será una gran adición al club, a medida que se avance a la próxima temporada.

El club de Frisco también firmó al alero sirio-americano Kalil ElMedkhar, quien viene de las filas de Philadelphia Union, del que adquirió sus derechos para las temporadas 21-22, con la posibilidad de alargarse tres años más.

DENISE ISLA Especial La Estrella

En sus seis temporadas con el FC Dallas, Michael Barrios deja un gran legado para los que jugarán en su posición en el equipo de Frisco.

En cuanto al extremo venezolano de 21 años, el club informó que viene a préstamo del Deportivo Lara para toda la temporada del 2021 con opción a

contrato.

Vargas jugó por su club de origen cuatro temporadas, incluyendo siete apariciones en Copa Libertadores.

VIENE DE LA 1A

PRESIDENCIA

convertirse en la primera mujer vicepresidenta de Estados Unidos, así como la primera afroamericana y la primera persona de origen asiático en acceder a este puesto, tras una carrera profesional en la que ya está acostumbrada a ser una pionera.

Y como tal juró como vicepresidenta de la mano de otra mujer que ha roto moldes, la jueza Sonia Sotomayor, la primera latina magistrada del Tribunal Supremo de EE.UU.

Con su madre como fuente de inspiración y proveniente de una cultura que “produce mujeres fuertes”, Harris ha tenido que recurrir en numerosas ocasiones a esa fortaleza en una trayectoria marcada por las primeras veces: fue la primera fiscal de distrito afroamericana y la primera fiscal general en la historia de California; la primera indio-americana en llegar al Senado y, ahora, marca otro hito al convertirse en vicepresidenta.

VIENE DE LA 1A

LOS RABANES

drá el sencillo “La Bomba”, un hit mundial de Azul Azul que Los Rabanes harán junto a su autor Fabio Zambrana en una nueva versión. En abril llegará “Caminando”, una canción en la que Los Rabanes y los Auténticos Decadentes versionan el tema clásico de Rubén Blades, teniendo como invitado de lujo en el bajo al Señor Flavio de los Fabulosos Cadillacs.

“Después de marzo del 2020 y haber hablado con todos los empresarios y promotores sobre la cancelación de todas las fechas y compromisos, empezamos a hablar con los amigos, comenzamos con Los Pericos, porque habíamos tocado en el Festival Vive Latino juntos, y ya habíamos hablado de colaborar con algún tema muy especial.

“Escogimos una canción de Roberto Carlos para hacer la canción ‘Un millón de amigos’, una versión reggae y ska, y la canción se viralizó. Nos dimos cuenta de que había un gran público confinado en su casa, eso le da un cariz diferente a tu día a día en confinamiento, son novedades en cuarentena”, contó Regueira.

En marzo de 2021 será lanzado “Rabanes 25”, un disco grabado durante la pandemia 2020, con el cual Los Rabanes celebran sus 25 años de trayectoria musical, en dicho disco viene el divertido tema “La vacuna”.

“Queríamos dejar un registro de todo este año, de todo lo que nos ha dejado la cuarentena, para que la gente diga, mira, esto lo grabaron en plena pandemia. Y el tema de La

Cortésia

Los Rabanes acaban de estrenar el tema “La vacuna”, un claro intento de conversar sobre la pandemia.

vacuna es un tema que salió de un chat familiar, los nombres de mujeres que vienen en la letra de la canción de ‘La vacuna’, son los nombres de mis primas y tías”, dijo el músico.

Agregó que se considera como una esponja que agarra mucha energía y se nutre de lo que ve y escucha en la calle.

“Siempre trato de que la chispa y el picante sean

cosas reales, son puntos de vista que están siempre en la calle. Esta canción viene de la burbuja familiar en el chat, así que ahí había de todo, de las ideas conspiratorias, hasta compartir cuál sería la mejor vacuna, si la china, la rusa, la alemana, la inglesa, etc., salió así, además de ir acompañada de muchos memes”, concluyó Regueira.

FWISD, Tarleton Celebrate Pact to Admit Students Distinguished High School Partnership Program

Fort Worth, Texas – Beginning with the 2021-22 school year, Fort Worth ISD seniors who graduate in the top 25% of their class will be eligible for guaranteed admission and annual scholarships to Tarleton State University. The icing on the cake is that Tarleton will also select one FWISD graduating senior each year to receive a \$10,000 annual scholarship, renewable for up to four years. The award will result in an annual commitment of \$40,000 to the school district.

The announcement was made at the January 12, 2021 FWISD Board of Education meeting and follows a Memorandum of Understanding signed by Fort Worth ISD and Tarleton in March of 2020.

“Tarleton State University has really stepped up to the plate with the Distinguished High School Partnership Program,” said Superintendent Kent P. Scribner. “Their efforts truly recognize the academic success our graduates bring to any educational setting. This long-term partnership offers promise and opportunity for so many students and their families who thought post-secondary education out of reach.”

As part of the Distinguished High School Partnership, created by Tarleton President James Hurley in 2019, the university will waive ACT

(American College Test) and SAT (Scholastic Aptitude Test) requirements and application fees for qualifying FWISD seniors.

“We are excited to be partners with Tarleton State University in the Distinguished High School Partnership Program,” said Board of Education President Jacinto Ramos, Jr. “This effort is designed to celebrate the achievements of our graduates and furthers the mission of both Tarleton and the Fort Worth ISD. This generous program will offer our students many more opportunities as they prepare themselves for career success and community leadership.”

Students graduating in the top 10 percent of their class

can expect a minimum \$3,000 award as part of the President’s Guaranteed Award Program (GAP). Those in the top 25 percent are guaranteed a minimum of \$1,500.

Board member Carin “CJ” Evans, representing District 5 expressed her gratitude to Tarleton when she said, “We are so happy to partner with such a strong public university. Our students and the entire Fort Worth community will benefit from it.”

Calling FWISD the backbone of freshman enrollment, Dr. Hurley said the partnership “raises a high tide,” enhancing opportunity, access and financial assistance for all students who want a university degree.

And Board member Tobin Jackson, representing District 2 joined her colleagues in voicing the considerable impact this will have on students.

“The enthusiasm of this effort, coupled with the ingenuity of Dr. Hurley, and Tarleton State University is a significant win for our students.”

As a bonus, qualifying FWISD seniors enrolled at Tarleton for spring 2021 can expect a bump in their financial aid. Admitted FWISD freshmen must submit a general scholarship application to determine eligibility.

For more information, go to www.tarleton.edu/scholarships. To learn about the President’s GAP, visit www.tarletonstate.us/gap.

Mr. “Mac” 100th *continued from page 1*

Lincoln, he joined Alpha Phi Alpha Fraternity, Inc. Mac graduated with a Bachelor of Arts degree in Agriculture. Upon graduation, he moved to Oakland, CA where he was hired at the Naval Shipyard and worked for 12 years. After leaving the shipyard he was hired by Golden State Life Insurance, a predominantly African American Company. Mac climbed the corporate ladder quickly. He became a successful district manager for the company. While living in Oakland he met the love of his life “Tommie.” Mac and Tommie were married and had two sons, Thaddeus and Theodore. The family united with the Mount Zion Missionary Baptist Church in Oakland, California. Mac was very active in the church and held various positions, including Christian education teacher.

Sons Thaddeus and Theodore relocated to Fort Worth, Texas. Mac and Tommie also relocated to Fort Worth in 1988, reuniting them with their two sons. Bro. and Sis. Thomas joined Mount Olive Missionary Baptist Church where they were very active in many areas of the church. They facilitated marriage workshops. Couples were invited into their home and were provided meals and marital counseling. Bro. and Sis. Thomas led the scholarship committee to support high school graduates in their quest to attend college. Because of their commitment

and dedication to education, this annual scholarship is named in their honor. Bro. and Sis. Thomas were inseparable, where you saw one, you saw both. This was always the case until they were separated by her death.

Bro. Thomas has a passion for teaching, sharing and helping others. He has been very active, serving as a deacon and teacher at Mount Olive Missionary Baptist Church. He served as devotion leader in the Fort Worth Citywide Brotherhood, North Texas District Association and National Baptist Convention of America. Bro. Thomas continues to be active, speaking at men’s retreats and teaching Sunday School. He also teaches the Lydia Circle Mission Group and serves as Scout Committee chairman. At the age of 95, Bro. Thomas answered the call to the ministry under the leadership of Pastor William T. Glynn. Rev. Thomas has preached two sermons and hopes to preach at least one more. Relying on his many years of experience in life and ministry, Rev. Thomas hopes to become an author by writing a book.

Mr. Thomas’ bio was humbly submitted by Mount Olive Missionary Baptist Church, Fort Worth, Texas

Our La Vida News The Black Voice Family wish you a very Happy Birthday and look forward to seeing you again on your big day in 2022.

In Cinque: National Precedents

Since its existence as the ‘law of the land’ the U. S. CONSTITUTION has been considered unshakable and unbreakable for over 200 years until January 6, 2021 when the supporters of President Donald J. Trump were urged to “Stop the Steal!” after he lost the presidential election and refused to concede stating that it was stolen from him; that he won by a landslide. His rhetoric and constant denial that he did not lose the election made many weak-minded people who believed in him do things that they probably would have never considered under normal circumstances. They acted like the followers of Jim Jones who led his flock to drink poisoned Kool Aid and die because he told them to; they believed in him and trusted him. They forgot about the law of the land attacked with the lawmakers inside to make “Mr. Trump’s dream” come true, that he won a second term as U.S. President! A precedent was set with an attack on the government and democracy.

It was not difficult to secure a following when this country had over 100 hate groups and extremists in 2020 to threaten the American democracy. The Southern Pov-

erty Law Center keeps track of hate and extremism in this country. In addition, they also support law suits wherein citizens whom have suffered under the hands of these groups go to court. No government funds are used to do their work. They depend entirely upon donations from citizens. In the Fall 2020 issue of literature in their fight against hate and extremism, the

SPLC outlined information about the Far-right extremism threatening American Democracy in 2020; Trump: ‘When the Looting Starts, the Shooting Starts;’, Kenosha White Supremacist Propaganda; ‘Boogaloo Boi arrest in Las Vegas with an analysis of the “Boogaloo” Racist Meme; an opinion about designating Antifa as Domestic Terrorist; Anti-Lockdown Rallies and

ways to counter the Far Right. Membership and support of the SPLC is a great way to go in support of an organization which works to foster justice and peace in this country. If enough people teach tolerance and fight hate as suggested by the SPLC, perhaps the attack on the capitol on January 6, 2021 would have never occurred.

The second precedent in

6-6A football standouts earn all-district nods

MATT WELCH
mwelch@starlocalmedia.com

For the second consecutive year, all roads in District 6-6A football ran through Marcus. The Marauders swept their conference schedule once again, posting a 6-0 district record and leaving no doubt in doing so. After winning four of its seven district ballgames by 10 points or less in 2019, Marcus' margin of victory in 6-6A skyrocketed to 30.2 points this season.

Naturally, the league champions were front and center for numerous superlative awards in the 6-6A all-district team, recently voted on by its coaches.

That included a pair of repeat accolades from 2019, including at the very top where Marcus senior quarterback Garrett Nussmeier earned a unanimous nod for district MVP. Nussmeier was the engine behind the Marauders'

first unbeaten regular season since 1995, passing for 2,815 yards, 33 touchdowns and five interceptions. The LSU commit added 128 rushing yards and a touchdown, and had the highest completion percentage of any quarterback ranked in the area's top 20 in Class 6A (72%).

"He went undefeated in district and led us against some really good teams. He did outstanding," said Kevin Atkinson, Marcus head coach. "He was the reason we were clicking so much on offense for sure."

The Marauders entered the postseason undefeated thanks to strong play in all three phases — an offense that averaged 46.2 points per game, a defense that allowed 22.7 and a special teams unit that routinely controlled field positions. Keying the latter-most was senior Christian Espinoza, who in addition to helping anchor the Marcus secondary handled punting and return duties for the Marauders. Espinoza was named 6-6A special teams player of

MORE ONLINE

For the complete listing of the 6-6A all-district football team, visit starlocalmedia.com.

the year.

Espinoza tallied a 38-yard net punt average, including three kicks pinned at the 1-yard line, and totaled 117 yards on punt returns and 154 yards on kickoff returns. When he returned the ball on kickoffs, Marcus' averaging starting field position was at the 33-yard line.

"Christian works extremely hard. Our goal every offensive series was to end it with a kick, and if that meant punting the ball then we were in good hands with Christian," Atkinson said. "And as a returner, he was so dynamic as well. Him being able to field punts was a definite asset to us."

Meanwhile, Atkinson and his coaches were named staff of the year for the second straight year.

One rung below the Marauders sat Lewisville, which went 4-2 and placed second in the district. The Farmers

Halfway home

6-6A girls jockey for playoff positioning past midpoint

MATT WELCH AND DAVID WOLMAN
Staff Writers

Tuesday marked the midway point for the District 6-6A girls basketball schedule, with all challengers trying to keep pace with Plano East.

The Lady Panthers emerged from the first half of their conference schedule undefeated at 6-0, positioning the program with the inside track for its first district title in more than a decade. At the same time, East has learned the thin margin for error — recently, the Lady Panthers managed to best the district's seventh-place team, Coppell, by just two points.

Teams like Hebron, Plano and Lewisville remain in contention and will look to knock

KEY GAMES REMAINING

- Plano at Lewisville, 6:30 p.m. Jan. 26
- East at Plano, 7 p.m. Jan. 29
- West at Flower Mound, 6:30 p.m. Jan. 29
- Lewisville at Hebron, 6:30 p.m. Feb. 5

East from its perch as the second half of the round robin begins. With plenty of meaningful games to play, here's a look at where all eight teams in 6-6A stand past the midpoint.

Editor's note: Records reflective of district games played prior to Friday

"I'm glad my seniors are going to get a season. It will be a five-week sprint to the district tournament."

CHUCK BROWN, THE COLONY HEAD WRESTLING COACH

DAVID WOLMAN
dwolman@starlocalmedia.com

Three weeks after the University Interscholastic League announced that the start to the 2020-21 season for high

school wrestling was delayed indefinitely, the state's largest governing body for high school athletics said Tuesday that it has set the first day of competition for March 1.

To reinforce social distanc-

ing guidelines that have been set by Texas Gov. Greg Abbott in response to the ongoing coronavirus pandemic, changes have been made in regards to the qualification standards for postseason tournaments.

Only dual, triangular and quadrangular meets will be allowed prior to the district, regional and state tournaments. And, only the top two individuals from each weight class advance from the dis-

trict meet to regionals and from regionals to state.

The UIL also released important dates.

District certification has been set for April 10. The regional meet is set for April 16-17 and the boys and girls tournaments will be held on separate days. The Class 5A and 6A state tournaments are scheduled for April 23-24. No announcement has been made in regards to the site

where the state tournament will be held — last season, the state tournament was held at the Berry Center in Cypress.

Coaches and referees must wear face masks at all times while wrestlers are required to wear face coverings at all times when not competing. Wrestlers must also have their temperature taken prior to weigh-ins. Post-match handshakes will not be per-

DFW HIGH-SPEED TRANSPORTATION VIRTUAL PUBLIC MEETINGS

January 27th 12:00 PM: (855) 756-7520 Ext. 70384#

January 28th 6:00 PM: (855) 756-7520 Ext. 70385#

NCTCOG is scheduling virtual public meetings to receive comments on the Dallas-Fort Worth High-Speed Transportation Connections Study. This study is evaluating high-speed transportation options, both potential routes and transportation modes, to modernize and enhance mobility between Dallas and Fort Worth.

For special accommodations due to a disability or for language translation, contact 817-695-9240 or HST_DFW@nctcog.org. Para ajustes especiales por discapacidad o para interpretación de idiomas, llame al 817-695-9240 o por email a HST_DFW@nctcog.org. Se harán las adaptaciones razonables.

To pre-register for one of the meetings, email hst_dfw@nctcog.org or call 817-695-9240 and provide your phone number as well as which date you plan to attend. Presentation materials will be posted for review on January 22 at www.nctcog.org/dfw-hstcs. Presentation information will be the same at both meetings.

North Central Texas Council of Governments thành lập ban tổ chức quy hoạch, xây dựng và quản lý đô thị (Metropolitan Planning Organization) cho vùng Dallas-Ft. Worth, đang lên lịch cho buổi họp online mở rộng để thu nhận ý kiến về nghiên cứu xây dựng hệ thống kết nối giao thông tốc độ cao tại Dallas-Fort Worth. Nghiên cứu này gồm cả các tuyến đường tiềm năng và phương thức vận tải cao tốc, để hiện đại hóa và tăng cường khả năng di chuyển giữa Dallas và Fort worth.

Người tàn tật hoặc cần thông dịch, xin gọi **817-695-9240** hoặc email hst_dfw@nctcog.org để được hỗ trợ.

Quý vị cần ghi danh trước khi tham dự bằng cách gọi số điện thoại liên lạc của mình và ngày họp phù hợp đến email hst_dfw@nctcog.org hoặc gọi số **(817) 695-9240**. Ngày 22 tháng 1, thông tin về buổi họp sẽ được đăng tải trước trên web www.nctcog.org/dfw-hstcs.

E-mail	Comment received by email during the comment period, but not during a live meeting
Collected at Meeting - not podium, general comment form	Comment received during a live public meeting through a general comment form, not PIMA “podium” feature
Collected at Meeting - podium	Comment received during a live meeting through the PIMA “podium” feature
Collected at Meeting - Telephone Town Hall	Comment received during a live meeting through the Telephone Town Hall service

Comment No.	Date	Stakeholder	Zip Code	Topic	Source	Comment	Response ¹
1	12/20/2020	Caleb Jiang	76092	Alignments, Other, Right of Way	Online - not collected at meeting, general comment form	I do not think maglev or hyperloop technologies are a good idea for this corridor due to their cost and unproven track record. Higher speed or high speed is the way to go. Also, I think the alignment that uses the existing TRE ROW is best for its low cost of acquisition.	NCTCOG appreciates your feedback and will take your comments into consideration. Mode technology readiness will be criteria used in the screening process.
2	1/23/2021	Anthony Nagy	76012	Alignments, Other, Traffic	Online - not collected at meeting, general comment form	Goal: Transport the largest number of people between Fort Worth and Dallas Depots, in the shortest amount of time, at the lowest cost, without disrupting the environment and existing North-South traffic modes. Seems like the straightest alignment, with minimal stops, with the least capital cost and lowest maintenance is the way to go!	As part of the alternative analysis process, we will analyze corridors appropriate for the region based on design standards, travel time, rough order of magnitude capital (construction), and operations and maintenance costs, and potential affects/impacts to both the built and natural environments. The three levels of alternatives screening for this project include criteria supporting all of the concepts described in this comment.
3	1/23/2021	Anthony Nagy	76012	Economic Development, Environmental, Other	Online - not collected at meeting, general comment form	<ol style="list-style-type: none"> 1. How will you or are you determining and justifying inclusion or exclusion stops along the originating and terminal points. 2. Will you measure viability by the number of passenger trips? 3. What are the times to accelerate and decelerate for each technology? 4. What is the most energy efficient technology? 	<ol style="list-style-type: none"> 1. The number of stations/stops will be studied and would depend upon the technology. For most technologies, we would anticipate one stop between Dallas and Fort Worth, most likely in Arlington. Currently, the Regional Transportation Council has a policy to have three stations in the region specified as downtown Dallas, Downtown Fort Worth and Arlington. Proposed locations for potential stations along each alignment alternative must facilitate connection to centers of economic activity. 2. Travel demand modeling will provide information regarding anticipated utilization and will be considered as one component of station site selection. 3. The project team is coordinating with transportation technology providers to validate current acceleration and deceleration rates. Acceleration rates range from 1.6 miles per hour per second (mph/s) to 3.3 mph/s while deceleration rates range from 2.0 to 3.3 mph/s. 4. Technology providers have shared information regarding the type of energy used to power various high-speed transportation modes but have not provided data regarding energy efficiency. Energy efficiency will be considered in Phase 2 of the study.
4	1/25/2021	Joseph Allen	75024	Alignments, Other, Right of Way	Online - not collected at meeting, general comment form	I am in favor of the SH180 alignment options for two specific reasons. The first is the construction impact: Alignments along Interstate 30 would likely plow through existing developments and/or create significant traffic problems on a corridor that was just recently rebuilt. Second, the 180 alignments would favor the possibility of an Arlington station near the sports stadiums and Six Flags. Of course, if the purpose of the project is simply to travel between Dallas and Fort Worth without stopping, this is a moot point. However, I do believe one stop essentially at the midpoint would create better opportunities for use (i.e. major events and better commutes for those in the Mid Cities). With a greater degree of available land and connectivity along SH180, I would deem it the superior choice.	NCTCOG appreciates your feedback and will take your comments into consideration. The SH 180 corridor is one of several possible options for the system being studied.

¹ For verbatim responses to comments given during the public meetings, please see the transcripts in Appendix E.

Comment No.	Date	Stakeholder	Zip Code	Topic	Source	Comment	Response ¹
5	1/26/2021	Heidi Irgens	76109	Other, Traffic	Online - not collected at meeting, general comment form	Please remember to supply ample parking at the high-speed stations. Fort Worth's transit system is not yet extensive enough to accommodate traveling to these stations without the use of a car. For example, our neighborhood has only 1 bus, that stops at the north end of the neighborhood. Some residents have a 2 mile walk to that bus stop. The bus also runs only once per hour. It is quite obvious that anyone who intends to take the high speed train will arrive at the station by car and needs a place to park.	NCTCOG appreciates your feedback and will take your comments into consideration. Station design and access by all modes (i.e., personal vehicle, transit, shared ride, bicycle, pedestrian) will be assessed during Phase 2 of this study.
6	1/27/2021	Ear Mark	76131	Economic Development	Collected at Meeting - not podium, general comment form	I didn't catch rather it was tax dollars or private money. Can you clarify?	During Phase 2, which will begin in the summer of 2021, funding and governance strategies will be evaluated and recommended. There are several funding options available - public (tax) option, private sector option, or some combination of the two.
7	1/27/2021	Paul Kerpoe	76112	Alignments, Other, Traffic	Collected at Meeting - not podium, general comment form	I have two concerns about the SH180 alignments. 1. First is the impact this would have on the Handley Historic district which straddles SH180 east of IH820. 2. Second is the impact this would have on the BRT route that Trinity Metro is studying for SH180 from downtown Fort Worth to IH820	NCTCOG appreciates your feedback and will take your comments into consideration. As part of our Level 3 screening, we will be looking potential impacts to cultural resources, including historic resources and neighborhoods and effects to other projects such as the bus rapid transit route Trinity Metro is studying. Additionally, Phase 2 will include a more detail assessment of potential impacts the built and natural environments in accordance with the National Environmental Policy Act and development of preliminary engineering.
8	1/27/2021	Ear Mark	76131	Other	Collected at Meeting - not podium, general comment form	Has the Mayor of Fort Worth voiced any concerns?	At this time Mayor Price has not indicated any concerns to us. We have briefed both the City of Fort Worth City Council Transportation Committee and members of Fort Worth city staff.
9	1/27/2021	Kate Norris	76102	Economic Development, Other	Collected at Meeting - podium	What was the travel time used in Level 1 Screening?	In the Level 1 screening, a 20 minute travel time threshold was used. Each alignment and mode combination was compared to that threshold.
10	1/27/2021	Michael Weiss	76116	Alignments, Right of Way, Traffic	Collected at Meeting - podium	Why didn't you include the estimated design, right-of-way, utility relocation, construction, inspection, and program management costs as part of the alignment screening process?	Costs will be considered as part of the Level 3 Screening. Levels 1 and 2 screened a large number of alignments and modes for fatal flaws to eliminate options that are not viable. In Level 3, there will be fewer alignments/modes and the effort will include the preparation of five percent design to help assess costs.
11	1/27/2021	Zain Khan	75074	Alignments, Economic Development, Traffic	Collected at Meeting - podium	How has China been able to fund and construct an intricate HSR in a decade or so; while the US lags in such domain?	It is difficult to compare the development of high-speed rail in US and China. The funding and construction of transportation projects in China follows a different process than in the US.
12	1/27/2021	Andrew Taft	76102	Other	Collected at Meeting - podium	Will a recording of this meeting be made available online?	Yes. A pre-recorded version of the presentation in both English and Spanish is online at https://www.nctcog.org/dfw-hstcs . The comments, questions, and answers from this meeting will also be made available online after the comment period ends.

Comment No.	Date	Stakeholder	Zip Code	Topic	Source	Comment	Response ¹
13	1/27/2021	Robert McBroom	75056	Other	Collected at Meeting - podium	The transcontinental railroad was built in six years almost entirely by hand. Workers drove spikes into mountains, filled the holes with black powder, and blasted through the rock inch by inch. How long do you anticipate it will take to complete the high speed rail project we are discussing today?	There are many factors that will determine the timeframe for completing the project. These include obtaining federal environmental and preliminary design approval, funding, development of construction plans, acquisition of right-of-way, and construction. We estimate the federal environmental and preliminary design approval process (Phase 2 of this study) will take two years. Part of the Phase 2 effort is to develop costs and funding strategies.
14	1/27/2021	William Vidaud	75001	Other	Collected at Meeting - podium	Were existing rail modes considered in the screening process (e.g. commuter rail and potential HSR), since access to maintenance and support could be a big factor in profitably implementing new modes of transportation between Dallas and Fort Worth.	Yes, both commuter rail (e.g., conventional passenger rail) and high-speed rail are being considered. However, commuter rail/conventional rail was eliminated during the Level 1 screening process because it did not meet the travel time threshold of being able to travel from Dallas to Fort Worth in 20 minutes or less. Maintenance facility locations and costs are some of the factors that will be considered in Level 3.
15	1/27/2021	Julie Ford	76103	Alignments	Collected at Meeting - podium	Of the three options, High Speed, Maglev, and Hyperloop, which one looks to be the most cost effective?	Cost effectiveness has not been determined. As part of the Level 3 Screening, construction, operating, and maintenance costs will be considered.
16	1/27/2021	Zain Khan	75074	Economic Development	Collected at Meeting - podium	Has the team studied China's HSR system?	We have researched the Chinese high-speed rail system and have reached out to them for information. However, to-date the Chinese have declined to participate in our study.
17	1/27/2021	David Moore	75218	Other	Collected at Meeting - podium	Does this project have funding yet?	At this time, the project is funded to complete Phase 2 – preliminary engineering and environmental documentation. However, during Phase 2, one of the requirements in the process is to develop a funding plan and a governance plan.
18	1/27/2021	Kevin Ceballos	76014	Alignments, Environmental	Collected at Meeting - podium	As an Arlington resident, I am very familiar with the railroads right along the SH-180 corridor. If the project were to continue along that corridor, how would the existing infrastructure in the area be affected by the HST project? Would it replace or perhaps repurpose the existing rails?	As we advance the potential designs along the SH 180 corridor, we are coordinating with the Union Pacific Railroad and will assess the effect to existing roadway and rail infrastructure. Because of the high-speed aspect of this project, an exclusive, elevated guideway would be needed. This project would not replace or repurpose the existing Union Pacific freight rail lines for passenger service.
19	1/27/2021	Chad Edwards	76102	Alignments	Collected at Meeting - podium	The alignment along IH 30 in Tarrant County seems to be the least impactful to residential areas when compared to the SH 180 corridor. The IH 30 alignment would be preferred.	NCTCOG appreciates your feedback and will take your comments into consideration. The IH 30 corridor is one of several possible options for the system being studied.
20	1/27/2021	Paul McManus	76226	Alignments, Environmental, Traffic	Online - not collected at meeting, general comment form	The presentation given on Wed., Jan. 27 at noon was excellent, as it was very thorough and easy to understand! I'm extremely supportive of any decision made, and I prefer a high speed train (similar to that of the Shinkansen train to be used by Texas Central on the Dallas-to-Houston route) on the I-30 corridor, as utilizing this corridor would be the most direct route between Dallas and Fort Worth. Utilizing this corridor could also potentially reduce vehicle traffic volume on I-30.	NCTCOG appreciates your feedback and will take your comments into consideration. The IH 30 corridor is one of several possible options for the system being studied.

Comment No.	Date	Stakeholder	Zip Code	Topic	Source	Comment	Response ¹
21	1/27/2021	David Moore	75218	Other	Collected at Meeting - podium	Given the existence of a TRE line, could this project be considered a redundancy?	The TRE serves a different travel market than what we anticipate a high-speed transportation system would serve. The TRE corridor serves the local commuters that desire to go to destinations between Fort Worth and Dallas. While this project would also connect downtown Fort Worth to downtown Dallas it would provide a different type of service that would be quicker and have fewer stations/stops. The other key difference is this project could eventually tie into a statewide high-speed system that would go from Fort Worth to the south on the west and from Dallas to Houston on the east.
22	1/27/2021	Kay Shelton	75202	Environmental	Collected at Meeting - podium	Since one of the objectives is connectivity with other systems like bus/rail, at what point will you begin to have estimates of demand and potential transfer activity that would inform capacity needs of the other systems?	For Phase 1 of the project, we are assessing the potential demand for the service rather than actual ridership or transfers. In Phase 2, we will be developing specific ridership estimates for the corridor(s) as well as what type of transfers would occur and how many people would be coming to or leaving from one of the stations on other modes.
23	1/27/2021	Ryan Lee	76182	Other	Collected at Meeting - podium	Are there other similar projects in the US that are being used as case studies to determine how ownership and funding could work (understanding that these haven't been determined for this project)?	Similar projects in the US include the proposed Dallas to Houston High-Speed Rail project; California High-Speed rail project, which is under construction; and a maglev study between Washington D.C. and Baltimore. The ownership and funding strategies for these projects differ (private versus public versus public-private partnership).
24	1/27/2021	Ryan Lee	76182	Economic Development, Right of Way, Traffic	Collected at Meeting - podium	Understanding that profitability isn't necessarily a primary, although important driver in public projects, what is the likelihood of utilizing a grade-separated technology (and associated infrastructure costs) on the proposed alignments?	Because of the high-speed aspect of this project, an exclusive, elevated (grade-separated) guideway would be needed.
25	1/27/2021	Dennis Henning	75078	Other	Collected at Meeting - podium	How could the cost of developing a new HS corridor between Dallas and Fort Worth possibly be justified when the existing TRE rail line could be upgraded (with more double-tracking and grade separations) for much less of an additional investment to operate very near to the 20 minute travel time Level 1 screening criteria?	The TRE serves a different travel market than what we anticipate this high-speed transportation system would serve. The TRE corridor serves the local commuters who desire to go to destinations between Fort Worth and Dallas. While this project would also connect downtown Fort Worth to downtown Dallas, it would provide a different type of service that would be quicker and have fewer stations/stops along the way. The other key difference in this project is that it could eventually tie into a statewide high-speed system that would go from Fort Worth to the south on the west and from Dallas to Houston on the east.
26	1/28/2021	Anna Laura Harmjanz	76226	Alignments	Collected at Meeting - podium	Will there be a station in Arlington?	The number of stations/stops is being studied and would depend upon the technology. For most technologies, we would anticipate one stop between Dallas and Fort Worth, most likely in Arlington. Currently, the Regional Transportation Council has a policy to have three stations in the region specified as downtown Dallas, Downtown Fort Worth and Arlington.
27	1/28/2021	Maribel Harmjanz	76226	Environmental, Other, Traffic	Collected at Meeting - podium	We are for SH180	NCTCOG appreciates your feedback and will take your comments into consideration. The SH 180 corridor is one of several possible options for the system being studied.

28	1/28/2021	Ruth Torres	75227	Other	Collected at Meeting - podium	How are these criteria being objectively scored? For example, specifically, HOW is environmental justice being measured and WHO is contributing to that assessment? Pls be careful to include general public more than business leaders or potential or actual vendors or those who do not reside in the impacted communities.	<p>To assess the environmental justice criterion in Level 2, we used the environmental justice index, which was developed by the North Central Texas Council of Governments. This index helps identify low-income and minority populations and compares that percentage within each census block group to the average within the region. These areas were mapped and compared to the alignments to determine potential impacts to those communities. This will be done again in Level 3, as we start to hone in on the actual right-of-way footprint for the remaining alignments. Additionally, in Phase 2, a community impact assessment and potential effects to environmental justice populations will continued to be assessed as part of the environmental documentation.</p> <p>This is a public process and we invite anyone from the community to participate and provide us names for any groups, neighborhood/homeowners associations, or environmental groups we should contact. The project team is available to make presentations to any organization. To request a presentation, please contact us via the project website, https://www.nctcog.org/dfw-hstcs, under Contact Information, Speaker Form Request or contact Rebekah Hernandez at rhernandez@nctcog.org</p>
29	1/28/2021	Tony Pham	75054	Alignments, Economic Development, Other	Collected at Meeting - podium	<ol style="list-style-type: none"> 1. Will there be a station in Arlington? 2. What will be the political challenges to the project, ie. from City of Arlington? 3. Will the project incorporate additional transit to stations located outside of Fort Worth and Dallas? 4. Has/will the project have meetings specifically with community leaders to ensure that this project will directly address inequity in the DFW Metroplex? 	<ol style="list-style-type: none"> 1. The number of stations/stops is being studied and would depend upon the technology. For most technologies, we would anticipate one stop between Dallas and Fort Worth, most likely in Arlington. Currently, the Regional Transportation Council has a policy to have three stations in the region specified as downtown Dallas, Downtown Fort Worth, and Arlington. 2. While the City of Arlington has not supported joining a transportation authority in the past, the city has established a Transportation Advisory Committee, which has recommended high speed rail service to the Arlington Entertainment District. 3. During Phase 2, station access by all modes (i.e., personal vehicle, transit, shared ride, bicycle, pedestrian) will be assessed. 4. Yes, we have had meetings with elected officials in the study area and community organizations. This is a public process and we invite anyone from the community to participate and provide us names for any groups, neighborhood/homeowners associations, or environmental groups we should contact. The project team is available to make presentations to any organization. To request a presentation, please contact us via our website, https://www.nctcog.org/dfw-hstcs, under Contact Information, Speaker Form Request or contact Rebekah Hernandez at rhernandez@nctcog.org.
30	1/28/2021	Camille White	75227	Environmental	Collected at Meeting - podium	Which of the three options has the most open undeveloped land?	We have not developed that information at this time. However, to minimize impacts, the alignments have been developed along existing transportation corridors as much as possible. As part of the Level 3 screening, we will be evaluating potential impacts to developed areas, wetlands, flood plains, and parks.

Comment No.	Date	Stakeholder	Zip Code	Topic	Source	Comment	Response ¹
31	1/28/2021	Ruth Torres	75227	Environmental, Other	Collected at Meeting - podium	Have you connected with Sierra Club & other environmental groups and received their participation / blessing?	We have not sought any participation from any specific environmental groups. This is a public process and invite anyone from the community to participate and provide us names for any groups, neighborhood/homeowners associations, or environmental groups we should contact. We have meet with federal and state environmental resource agencies such as the US Environmental Protection Agency and US Army Corps of Engineers.
32	1/28/2021	Andrew Wallace	75208	Other	Collected at Meeting - podium	How can you even entertain the Hyperloop option when in it's nascent stage is a disappointment and will likely never be viable as a means of transportation? Why waste time and effort on something when the technology that already exists actually works?	NCTCOG appreciates your feedback and will take your comments into consideration. Mode technology readiness will be criteria used in the screening process. We are evaluating all options because we want to make the best choice for our region.
33	1/28/2021	Todd Bridge	29212	Economic Development, Other, Traffic	Collected at Meeting - podium	What will top speed of the High Speed Rail train between downtown Dallas to downtown Fort Worth? Will this project work with the Texas Central Railroad?	Travel time is highly dependent upon the specific geometry of the corridor that we select. We have developed travel times on every corridor for every technology at both levels of screening. The top speed was 400 miles per hour for hyperloop. These will be refined during the Level 3 screening as we continue to refine the design of the remaining alignments. While high-speed trains can travel more than 200 miles per hour, the geometry of the alignment and the number of stations served dictate the actual top speed at which the technology can operate. This study is being coordinated with the proposed Dallas to Houston high-speed rail project. The connectivity to the Dallas to Houston project will depend on the technology/mode selected. If the same technology (high-speed rail) is selected for the Dallas to Fort Worth corridor, then the same train from Houston could continue to Fort Worth. If a different technology/mode is selected for Dallas to Fort Worth, we would work with Texas Central Partners to make a transfer as seamless as possible.
34	1/28/2021	Andrew Wallace	75208	Alignments	Collected at Meeting - podium	Now that Buttigieg is Transportation Secretary and he is in favor of highway removals, would you consider the idea of removing I-30 in favor of this high speed corridor?	No. IH 30 provides both local and regional access to the communities it passes through. While this project connects Dallas and Fort Worth, it would provide a different type of service that would be quicker and only one stop along the way.
35	1/28/2021	Howard Davis Tubre	76148	Other	Collected at Meeting - podium	What are the tax implications of those who are outside the range of utilization for the high speed services. Those who would find outside the time between destinations on the line. (this is for those where the time to get to the destinations would be greater than the time to access the originating sites).	During Phase 2, which will begin in the summer of 2021, funding and governance strategies will be evaluated and recommended. There are several funding options available - public (tax) option, private sector option, or some combination of the two.
36	1/28/2021	Tony Pham	75054	Other	Collected at Meeting - podium	Has the project team discuss with UTA or its students as part of the outreach to stakeholders	The project team has not specifically discussed this project with UTA or its students. The team is available to make presentations to any organization, included UTA staff and/or students. To request a presentation, please contact us via the project website, https://www.nctcog.org/dfw-hstcs , under Contact Information, Speaker Form Request or contact Rebekah Hernandez at rhernandez@nctcog.org .

Comment No.	Date	Stakeholder	Zip Code	Topic	Source	Comment	Response ¹
37	1/28/2021	Anna Laura Harmjanz	76226	Other	Collected at Meeting - podium	Have Arlington neighborhoods and/or business groups had meetings with NCTCOG on the high speed transportation project? If so which ones?	The project team has meet with a several Arlington community groups and elected officials. The team is available to make presentations to any organization. To request a presentation, please contact us via our project website, https://www.nctcog.org/dfw-hstcs , under Contact Information, Speaker Form Request or contact Rebekah Hernandez at rhernandez@nctcog.org .
38	1/28/2021	Kevin Landrum	76116	Alignments	Collected at Meeting - podium	Have you spoken to any leadership at UTA regarding the SH180 route?	The project team has not specifically discussed this project with UTA or its students. The team is available to make presentations to any organization, included UTA staff and/or students. To request a presentation, please contact us via our project website, https://www.nctcog.org/dfw-hstcs , under Contact Information, Speaker Form Request or contact Rebekah Hernandez at rhernandez@nctcog.org .
39	1/28/2021	Amber Raley	76234	Economic Development	Collected at Meeting - podium	What is the anticipated economic impact in terms of jobs and investment linked to the project?	Specific economic impacts from this project have not been evaluated. During development of the environmental documentation in Phase 2, the potential economic impacts in terms of jobs and investment will be the assessed. However, on average, other studies have shown that every billion dollars in construction produces about 15,000 jobs.
40	1/28/2021	Todd Bridge	29212	Economic Development, Right of Way, Traffic	Collected at Meeting - podium	I have relatives in Houston, Fort Worth, and Oklahoma City, and Dallas would be the hub city of my visits. Would you be open to crossing state lines to create a service to Oklahoma City??? Thanks for answering	The Texas Department of Transportation and the Oklahoma Department of Transportation teamed up on a study a few years ago to study rail between the two states in a study called the Texas Oklahoma Passenger Rail Study (see https://www.txdot.gov/inside-txdot/projects/studies/statewide/texas-oklahoma-rail.html). The study indicated high speed trains would be more appropriate south of Fort Worth and higher speed trains would be the appropriate technology to use from Oklahoma City to Fort Worth.
41	1/28/2021	Ruth Torres	75227	Other	Collected at Meeting - podium	I just heard you say removing SM Wright to boulevard in downtown Dallas, is that definite??? I thought it was still in DOT discussions but not finalized. I do believe that is a good decision but would appreciate confirmation. Are there any commitment and goals for minority & women owned companies to participate as primes and subs for this project? If so, what is it?	The US 175 SM Wright project in Dallas is not part of the Dallas-Fort Worth High-Speed Connections Study. However, the construction to extend US 175 to IH 45 has been completed, the Texas Department of Transportation has begun the project to remove the elevated section of the SM Wright Freeway. The elevated freeway is being replaced with a six-lane, at-grade street. For the Dallas-Fort Worth High-Speed Connections Study, NCTCOG as set the disadvantage business enterprise (DBE) goal at 31.3 percent.
42	1/28/2021	Ruth Torres	75227	Other	Collected at Meeting - podium	Partying over here with that confirmation of removal on SM Wright & tech improvements, WHOO HOOOOO THANK YOU ! GOOD JOB> where can I get written info on this? 214-680-9119. RuthTorresCampaign@mail.com, Dallas City Council Candidate, D5, my territory	NCTCOG appreciates your feedback. The US 175 SM Wright project in Dallas is not part of the Dallas-Fort Worth High-Speed Connections Study. For more information on the SM Wright project, we suggest you contact the Texas Department of Transportation at 214-390-7130 or go to https://www.smwrightproject.com/
43	1/28/2021	Phyllis Silver	75001	Other	Collected at Meeting – Tele-Townhall	Hi. I would like a brief explanation of what magnetic levitation is and whether it has any effect on the passengers.	Magnetic levitation uses high powered magnets to cause a vehicle to float. The vehicle is moved along with electromagnets as well. There are no moving parts in the system, which reduces maintenance costs. The magnetic fields do not affect people. Magnetic levitation has been in operation for many years with a couple of major systems in operation throughout the world.

44	2/9/2021	Beth Knight	75219	Other	E-mail – not collected at meeting	Good Morning, After hearing the different options for high-speed trains, I am opposed to hyper-loop transit due to: the lack of safety backups (no, I don't trust Elon Musk), the lack of accommodation for wheelchairs or strollers, and the relatively unproven technology. Thanks for taking my comments! Sincerely, Beth Knight	NCTCOG appreciates your feedback and will take your comments into consideration. Mode technology readiness will be criteria used in the screening process.
45	2/11/2021	Allen Bussell		Other	E-mail – not collected at meeting	Agree with your preferred alignments and modes. I recommend using maglev or hyperloop over conventional "bullet" type because of reduced ROW and noise. Also, the scale of the vehicles - would assume time to speed for the larger "bullet" would restrict it from reaching its potential while making a stop at the Arlington sports venues. The "bullet" seems more appropriate for longer stretches like between DFW and Houston / Austin. Thank you for the excellent presentation and the amount of work being done. Q: What rails are planned from surrounding communities to connect to the Dallas and Fort Worth hubs where one will then catch the high speed to Arlington (for instance)? We live north of Frisco, near US380 and I've not seen the entire rail / mass transit plan that connects the region. Again, thank you! Allen	NCTCOG appreciates your feedback and will take your comments into consideration. Mode technology readiness and potential right-of-way impacts will be criteria used in the screening process. As a part of <i>Mobility 2045</i> , the long-range transportation planning document for the DFW region prepared and maintained by NCTCOG, several major transit corridors have been identified throughout the region to enhance connectivity. The <i>Mobility 2045</i> document can be accessed online at https://www.nctcog.org/trans/plan/mtp/2045 ; Chapter 6 "Mobility Options", Section 6.4 "Public Transportation" illustrates the future planning efforts for public transportation in the region. Additionally, NCTCOG is leading a study to review the feasibility and travel demand of a passenger rail corridor between Irving and Frisco along an existing freight line used by the Burlington Northern Santa Fe (BNSF) Railway company. The ongoing efforts of this study may be followed via the project website, https://www.nctcog.org/trans/plan/transit-management-and-planning/general-public-information/transit-planning-activities/transit-planning-projects/transit-planning-and-implementation-studies/collin-county-study-area .
46	2/17/2021	William Mohamad	75052	Economic Development, Other	Online - not collected at meeting, general comment form	I wish the connections study map extended further south, encompassing IH-20. I feel like not including the IH-20 area is missing out on a lot of economic hubs like the parks mall, the paragon outlets, etc.	The focus of this study is providing high-speed service between downtown Dallas and downtown Fort Worth. A route along IH 20 would be longer in distance and increase the travel time and has some grade constraints due to a number of undulating hills along the corridor.
47	2/18/2021	Andrew Armstrong		Other	E-mail – not collected at meeting	I am an eager supporter of a high speed transportation connection between downtown Dallas and Fort Worth. I travel between the two multiple times each year and would do so more often if the journey was quicker. Even if I didn't travel it I would support my tax dollars supporting projects like this as it is the future. Also, as exciting as Hyperloop technology is I strongly support high speed rail as it is a proven technology and already operational. I think total unique annual trips need to be taken into account when weighing whether a single mid-point stop should be placed near the stadiums or near UTA. Whichever has the largest total annual unique trips should get the station.	NCTCOG appreciates your feedback and will take your comments into consideration. During the study process, many factors are considered regarding station placement. Travel demand estimates for ridership is one criterion evaluated. In addition, impacts to adjacent properties are also considered. At this point in our study process, several alignment and station placement options remain viable. As with station placement and corridor alignment, the selection of transportation mode is also heavily analyzed.

48	2/22/2021	Phyllis Silver	75001	Other	Mail – not collected at meeting	<p>I participated in the Thursday, January 28, 6 pm virtual public meeting on DFW High-Speed Transportation. I found the concept to be very interesting.</p> <p>I contacted Rebekah Hernandez to determine the demand for high-speed service between Downtown Dallas and Downtown Fort Worth. Currently, we have TRE service running to and from both downtown areas. Rebekah mentioned that the question has come up and that a report should be released before the April 2021 Public Involvement Meeting. I would be interested in reading this report when it is published.</p> <p>Assuming that the project does go forward, I recommend that the following criteria be used to select the specific high-speed mode for the project:</p> <ol style="list-style-type: none"> 1. Choose the mode that is the safest in terms of being the least likely to have accidents. 2. Choose an option that is cost effective to the user. Since there is an alternative mode of public transportation already in place, we would want the benefits of the new mode to outweigh the cost. In this way, it is more likely that enough people will favor the new mode. I am aware that costs will be analyzed at a later stage in the project. Thank you. 	<p>NCTCOG appreciates your feedback and will take your comments into consideration.</p> <p>The TRE serves a different travel market than what we anticipate a high-speed transportation system would serve. The TRE corridor serves the local commuters wanting to go destinations between from Fort Worth to Dallas. While this project would also connect downtown Fort Worth to downtown Dallas, it would provide a different type of service that would be quicker and have fewer stations/stops along the way. The other key difference in this project is that it could eventually tie into a statewide high-speed system that would go from Fort Worth to the south on the west and from Dallas to Houston on the east.</p> <p>Technology readiness, including safety systems, will be evaluated during the Level 3 Screening process as will capital (construction) and operations and maintenance costs.</p>
49	02/24/2021	Anonymous	N/A	Other	Telephone – not collected at meeting	<p>Will there be a report on what the ridership demand will be for the HSR between Dallas & Fort Worth? Will this be addressed in any upcoming reports on the HSR? I am thinking along the lines of justification of the expense vs how many will use it.</p>	<p>For Phase 1 of the project, we are assessing the potential demand for the service rather than actual ridership. In Phase 2, we will be developing specific ridership estimates for the corridor(s) as well as what type of transfers would occur and how many people would be coming to or leaving from one of the stations on other modes.</p>
50	2/24/2021	Alicia Winkelblech (City of Arlington)	76010	Other	Email – not collected at meeting	<p>As follow-up to our recent meeting, please accept this email as confirmation of Arlington’s continued commitment to the high speed corridor between Dallas, Arlington and Fort Worth with a station in Arlington. The City would like to reaffirm our intention to participate in the development of the high speed corridor through continued planning and advocacy efforts. Should a high speed rail station be proposed in Arlington, after all state and federal clearances have been received and a business plan with financing has been developed and approved, the City would like to state our intention to financially participate in the development of the project. The City is exploring a variety of tools and options to allow the City flexibility in how we financially contribute. We look forward to continued collaboration on this important project. Please let me know if you have any questions.</p>	<p>NCTCOG appreciates your feedback and will take your comments into consideration.</p>

Comment No.	Date	Stakeholder	Zip Code	Topic	Source	Comment	Response ¹
51	3/8/2021	Anna Laura Harmjanz	76019	Alignments	Email – not collected at meeting	My name is Anna Laura Harmjanz, I am a student at the University of Texas at Arlington. I wanted to ask a question about the DFW High Speed Rail Alignment. In the newsletter that was sent: https://hntb-geospatial.s3.us-east-1.amazonaws.com/PIMA/NCTCOG/DFWHighSpeedNews_1stedition.pdf , it mentions that the project is moving forward with 10 alignments, seven near the I-30 corridor and three traveling near SH180. How many alignments are there going to be in the final phase? Is there going to be one for I-30 and SH180? I also wanted to ask if there is some form of a message portal to submit questions about the corridor that I could share with my peers.	Seven distinct alignment options for IH-30 and three for SH 180 under evaluation in the Level 3 screening of Phase 1 (Alternative Analysis). Based on the Level 3 evaluation, we will pare down the total number of alignment alternatives we recommend for consideration during Phase 2 (preliminary engineering and environmental documentation). The number of options/ corridors will not be known until the Phase 1 is completed. We anticipate completing the Alternatives Analysis (phase 1) in Summer 2021. To submit questions or comment, please go to the project website at www.nctcog.org/dfw-hstcs and scroll down to the bottom. You will see one button to submit comments on the project and another button to ask a question.
52	3/10/2021	Anna Laura Harmjanz	76019	Alignments	Online – not collected at meeting	I support an alignment that stops close to the University of Texas at Arlington. We have many students who live in Dallas and Fort Worth who would use this service, and students living on campus would use it to visit both downtown areas frequently. If this alignment is not possible (closer to the entertainment district rather than the University), there needs to be a free shuttle included to transport riders to the University (not Via system, but a continuous shuttle service instead).	NCTCOG appreciates your feedback and will take your comments into consideration.
53	3/11/2021	Nicholas Raven	75244	Other	Online – not collected at meeting	Does this HSR provide wifi? and will the seats be more lounge type of seating or traditional bus seating?	Specific passenger amenities and seating configuration of the trains/vehicles have not been determined at this time. These could vary by technology/mode.
54	03/11/2021	Derek Thompson	76006	Economic Development, Traffic	Online – not collected at meeting	Build stations near major colleges and their stadium, college kids are not yet addicted to their cars and they have money to be lifelong riders	NCTCOG appreciates your feedback and will take your comments into consideration.

**APPENDIX D. VISUALS
PRESENTATION (ENGLISH)**

HIGH-SPEED

TRANSPORTATION

Dallas-Fort Worth

01.27.2021 and 01.28.2021 Public Meeting #2

March 2021

Page 228

Agenda

- Welcome/Introductions.....Kevin Feldt, NCTCOG
- Project Overview.....Kevin Feldt, NCTCOG
- Screening Process and Level 1 & 2 Results....Jan Bryant, HNTB
- Next Evaluation & Design Steps.....Chris Masters, HNTB
- Public and Agency Engagement.....Rebekah Hernandez, NCTCOG
- Public Comments.....All

Purpose of the January Meetings

- Review the results of the Level 1 and Level 2 screenings of the alignments and technologies
- Present recommendations for alignments and technologies to be screened in Level 3
- Get your input on the results and recommendations

Project Overview

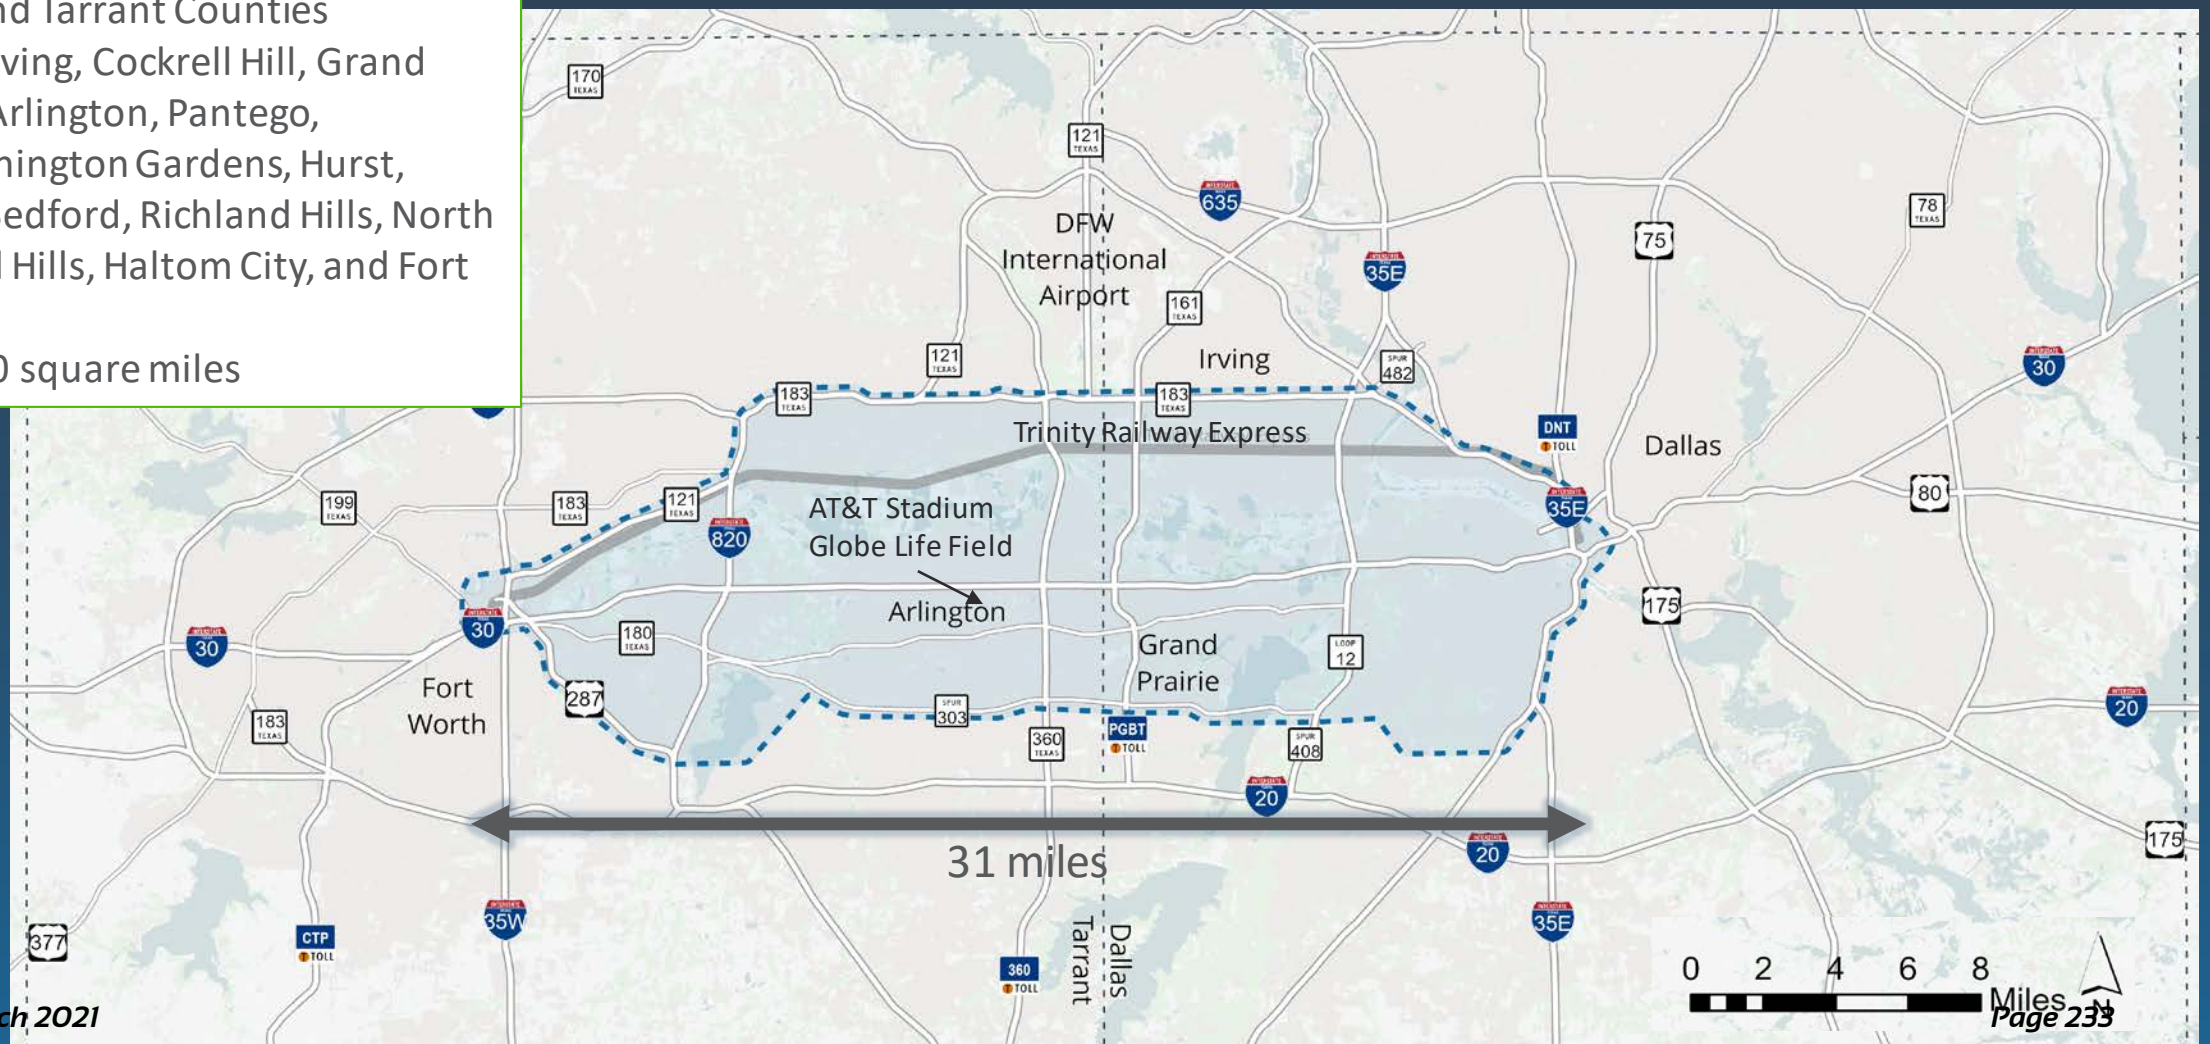

Objective of this Study

- Evaluate high-speed transportation alternatives (both alignments and technology) to:
 - Connect Dallas-Fort Worth to other proposed high-performance passenger systems in the state
 - Enhance and connect the Dallas-Fort Worth regional transportation system
- Obtain federal environmental approval of the viable alternative

Study Area

The study area traverses:

- Dallas and Tarrant Counties
- Dallas, Irving, Cockrell Hill, Grand Prairie, Arlington, Pantego, Dalworthington Gardens, Hurst, Euless, Bedford, Richland Hills, North Richland Hills, Haltom City, and Fort Worth
- Over 230 square miles

March 2021

Miles
Page 233

Preliminary Project Purpose

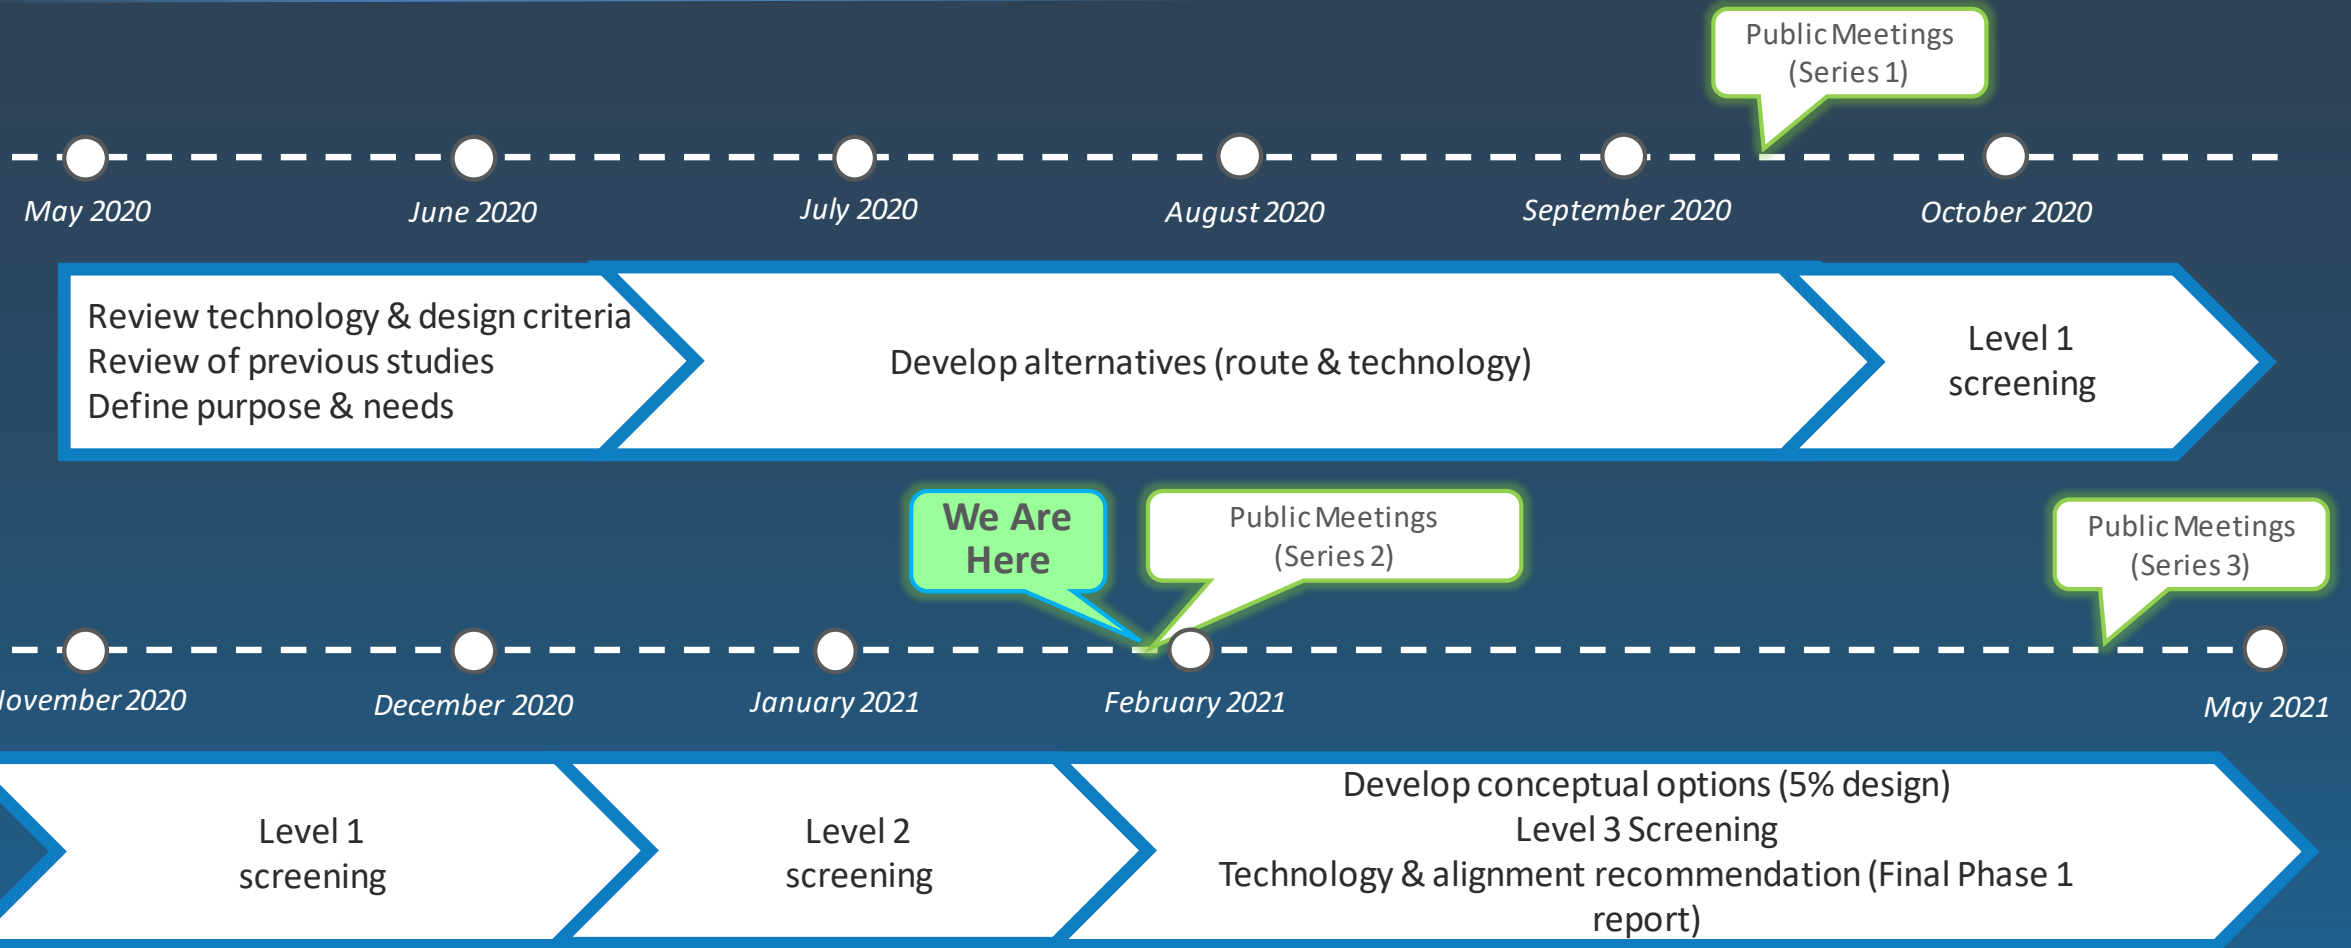

Connect Downtown Dallas and Downtown Fort Worth with high-speed intercity passenger rail service or an advanced high-speed ground transportation technology

- Provide a safe, convenient, efficient, fast, and reliable alternative to existing ground transportation travel options;
- Advance the state high-performance rail transportation network
- Enhance connectivity within the Dallas-Fort Worth region
- Support economic development opportunities

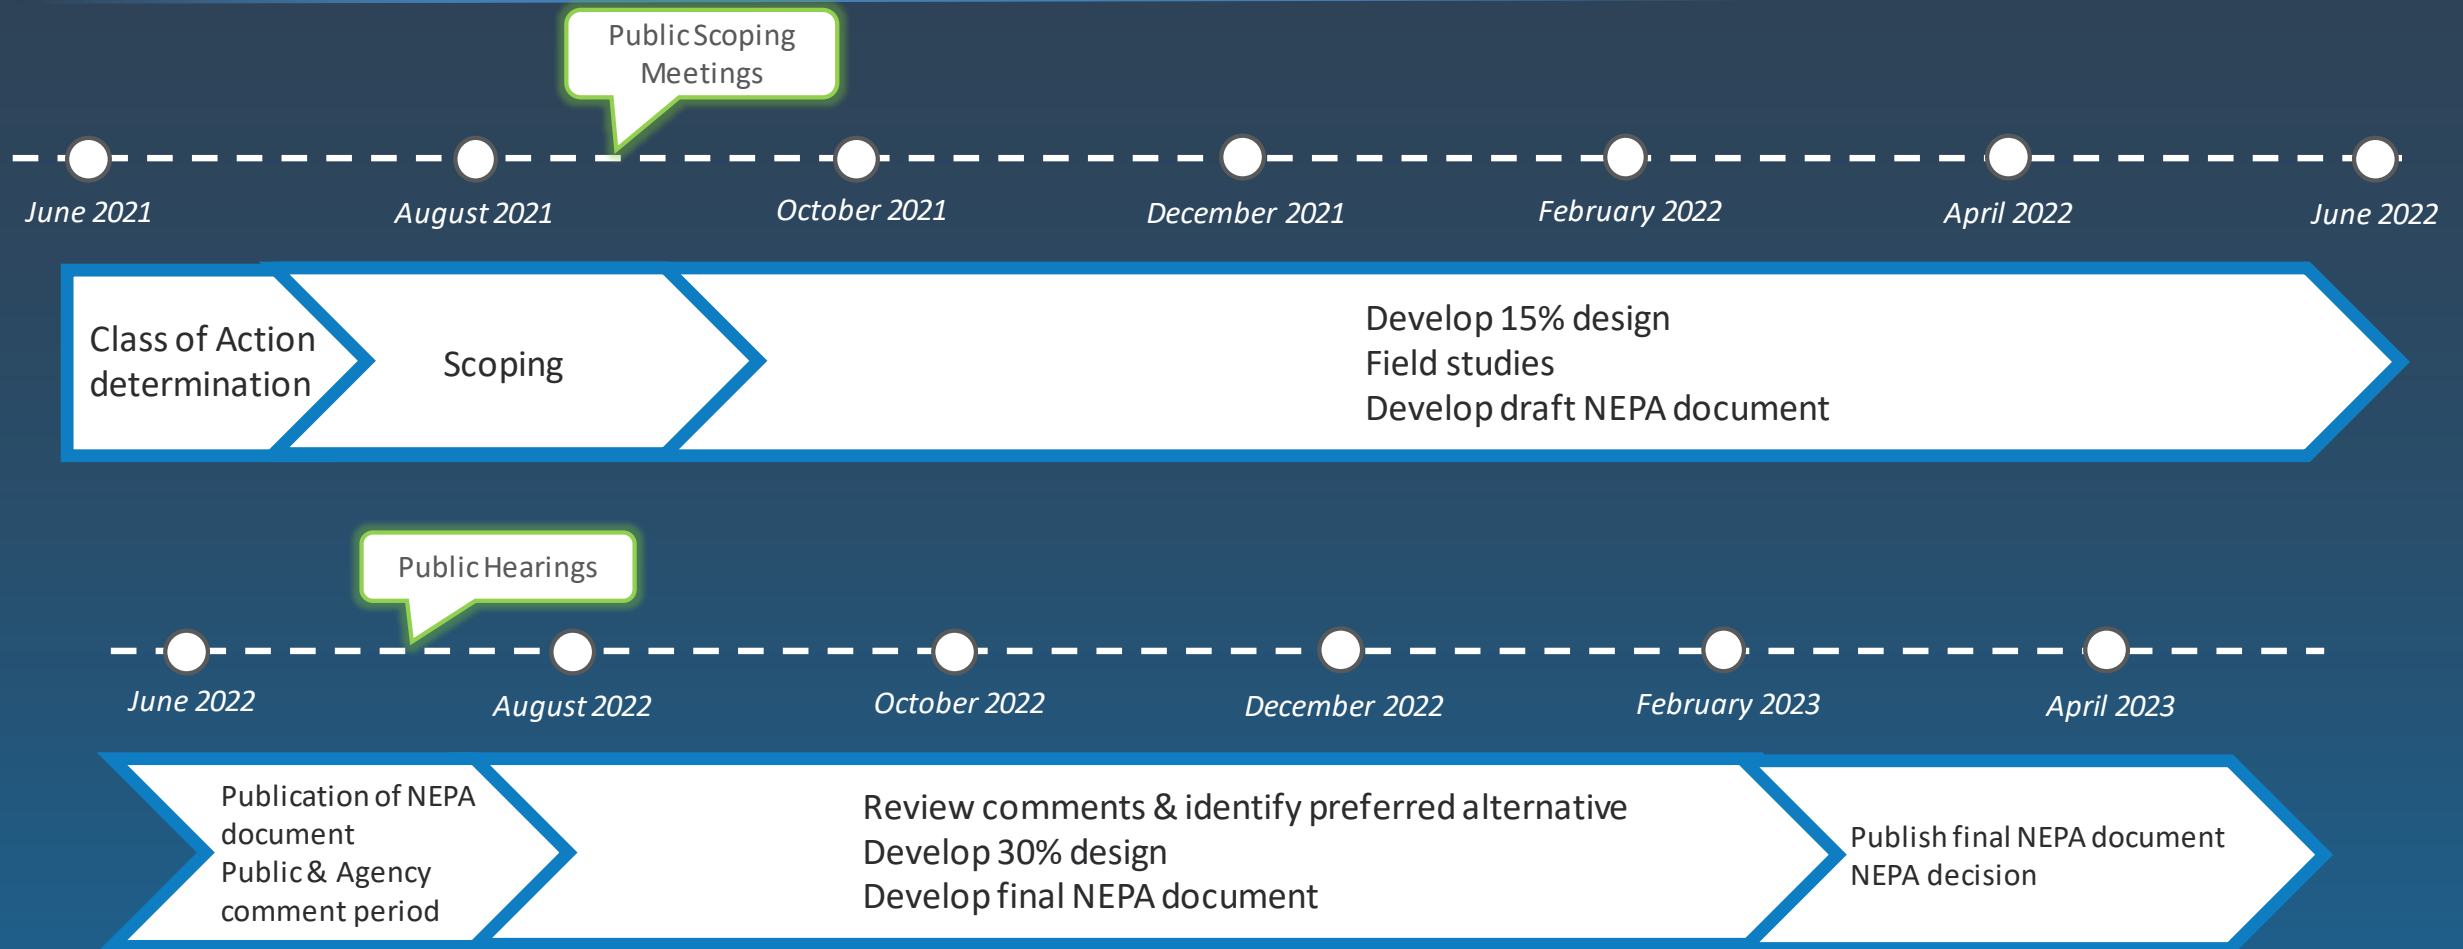

For more detailed information go to: www.nctcog.org/dfw-hstcs

>> Project Information >> Purpose and Need

Phase 1 Schedule – 12 Months

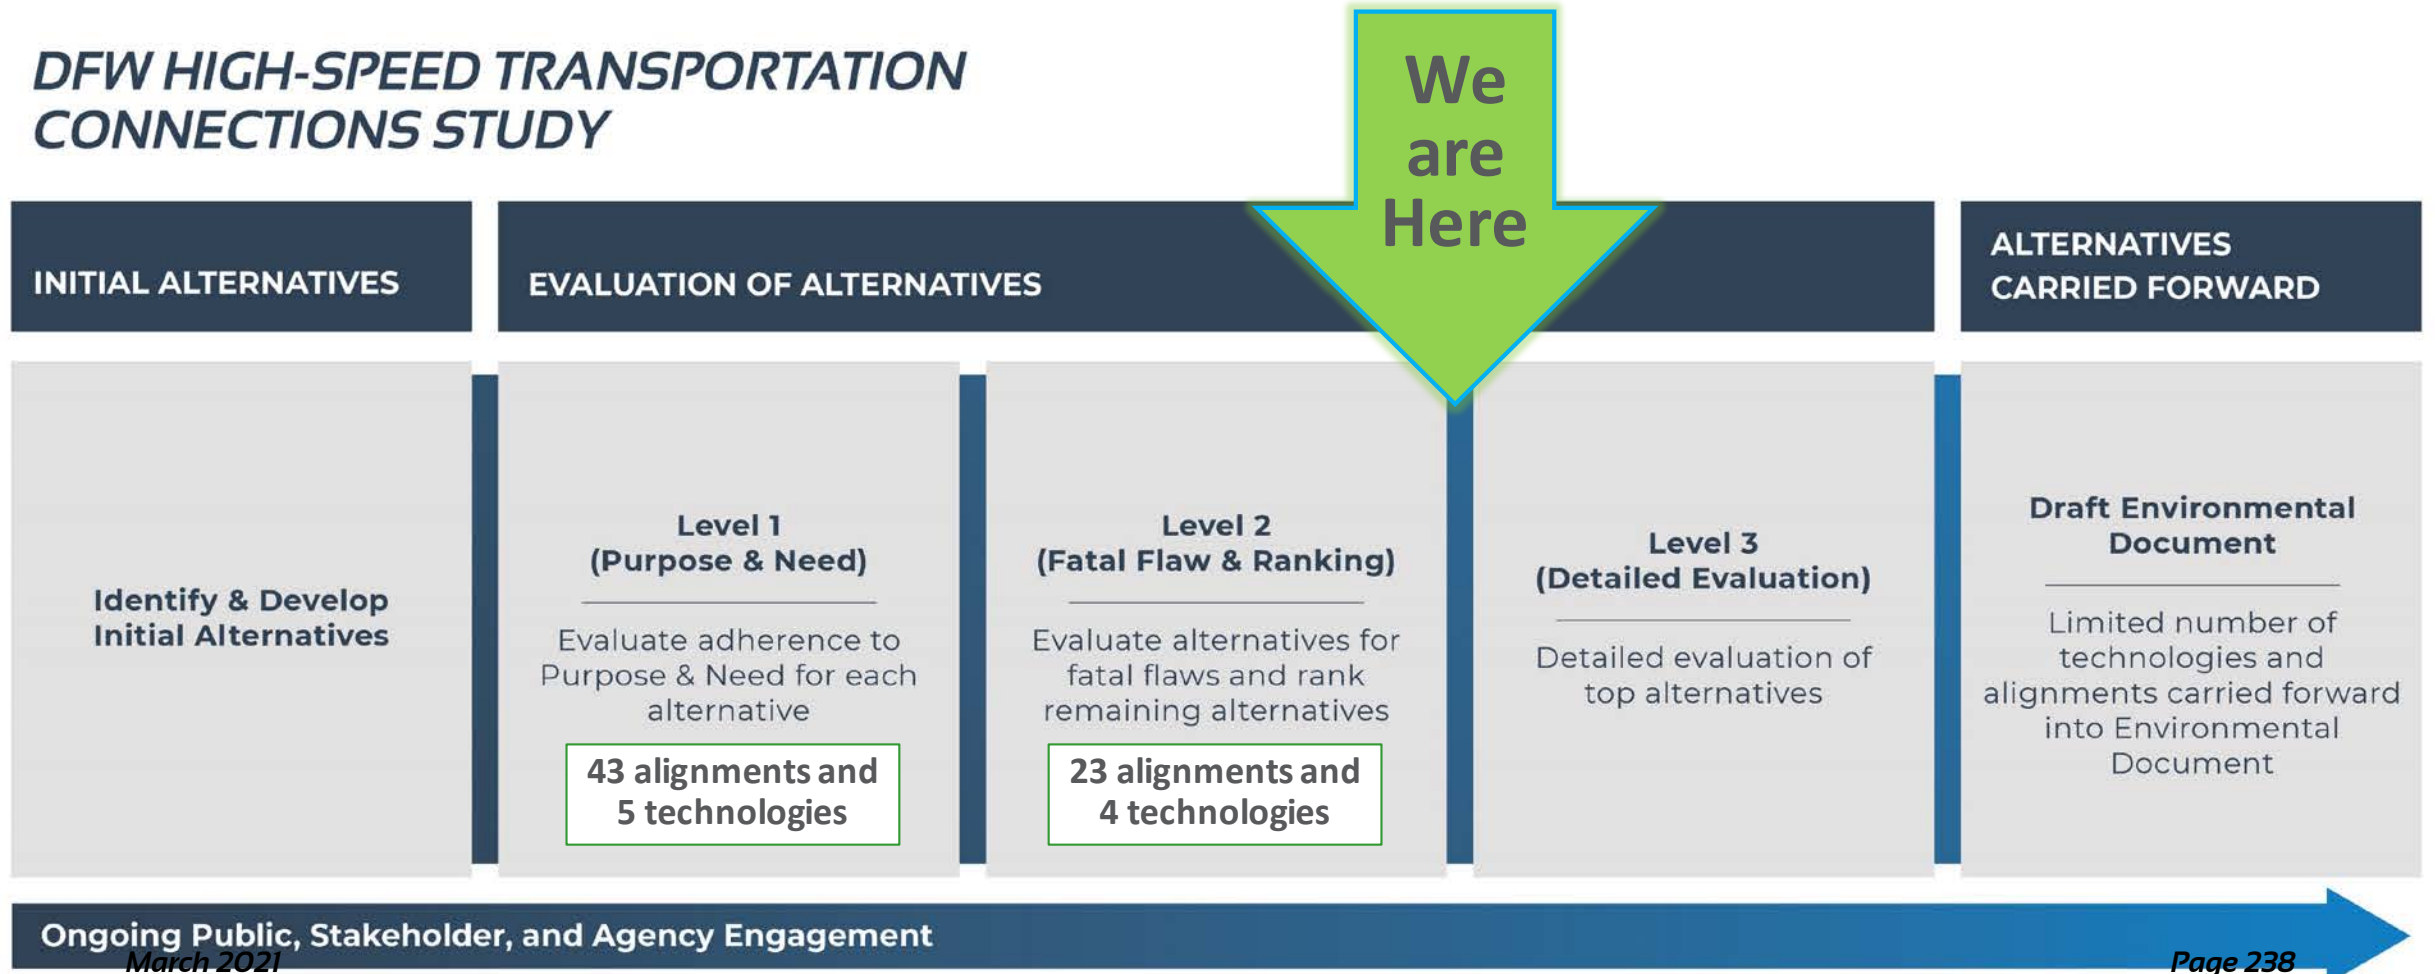

Phase 2 Schedule – 24 Months

Screening Process and Level 1 & 2 Results

Evaluation Methodology

DFW HIGH-SPEED TRANSPORTATION CONNECTIONS STUDY

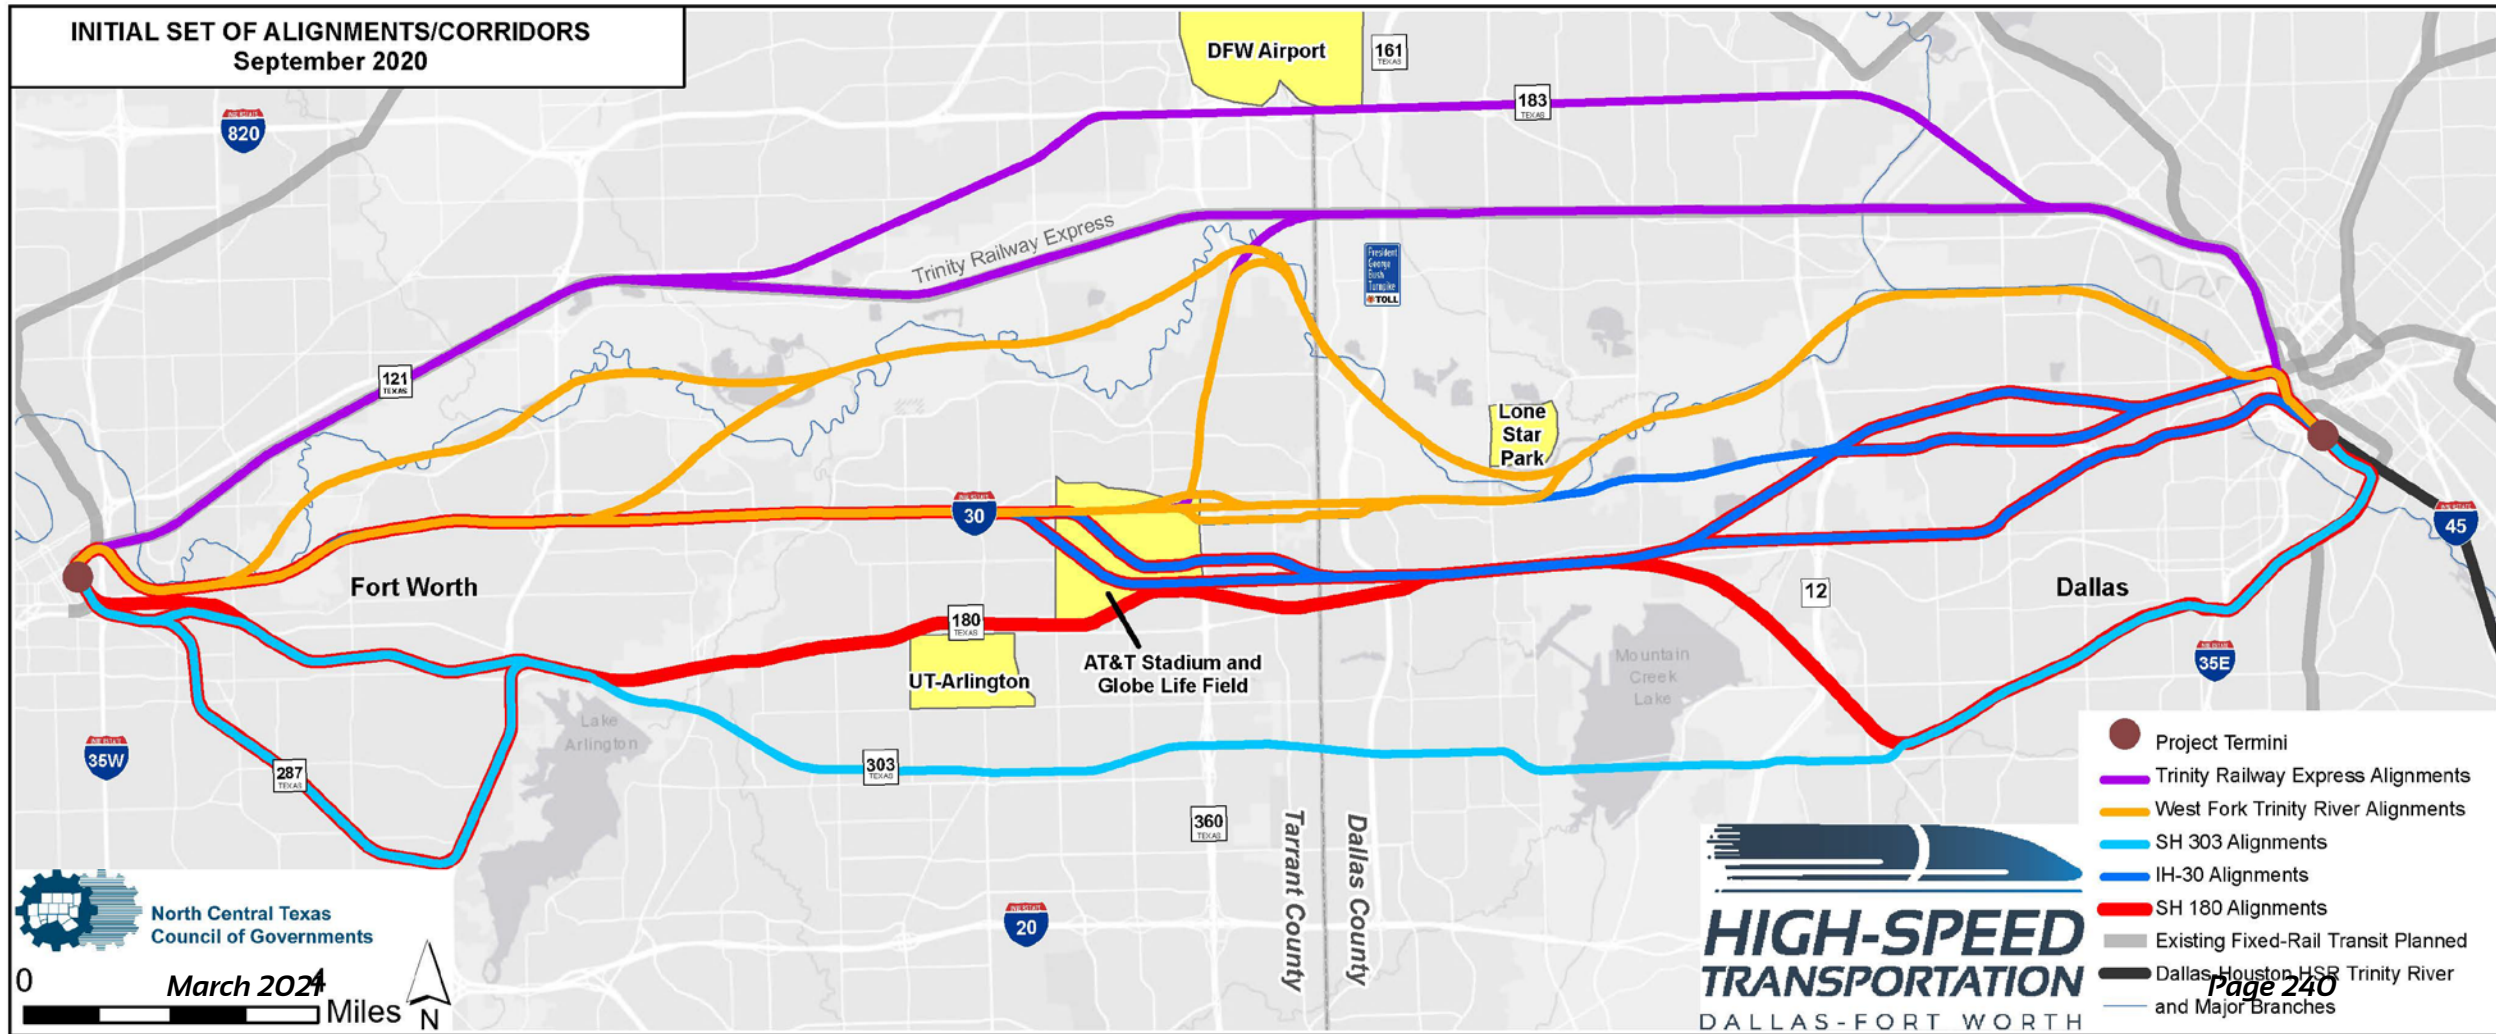

Initial Alignments/Corridors

- Initial alignments developed based on previous studies
- Trying to use existing transportation corridors
- Right-of-Way may be public or private, dependent upon the method used for project delivery
- All alignments connect to the proposed Dallas high-speed rail station and the Fort Worth Central Station

43 end-to-end (Dallas to Fort Worth) alignments/corridors were identified

Initial Set of Alignments/Corridors

Initial Modes of Transportation

● Conventional

● Higher-Speed

● High-Speed

● Maglev

March 2021

● Hyperloop

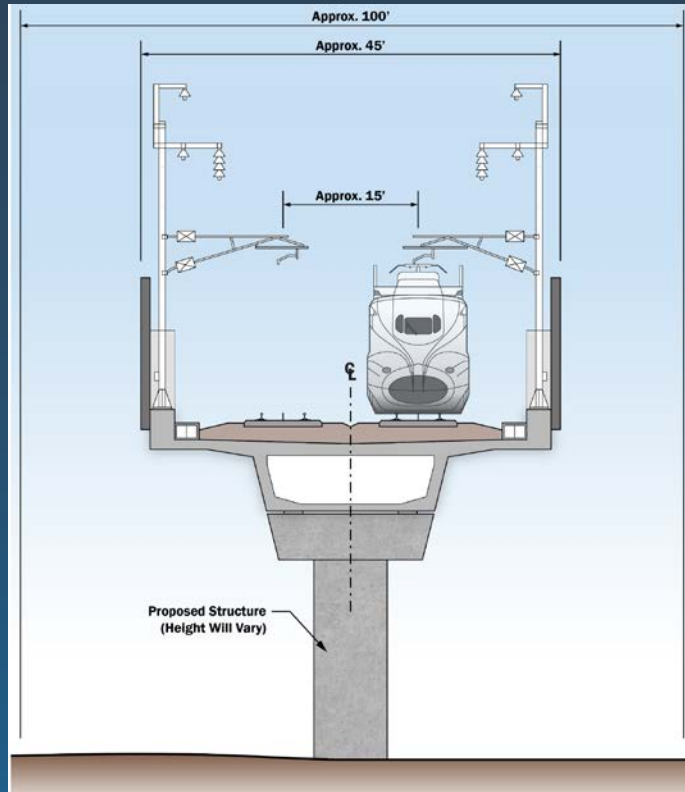

● Emerging Technologies

Potential Typical Sections

● High-Speed

● Maglev

● Hyperloop

Screening Criteria by Levels

Level 1 (Ability to Meet Purpose and Need)

Primary

- Serves Downtown Dallas and Fort Worth Central Station (fatal flaw)
- Travel Time (fatal flaw)

Secondary

- Safe
- Reliable
- Convenient
- Linkages to Other High-Performance Systems in Texas
- Connect to Existing Regional/Light Rail in Dallas-Fort Worth
- Improved Access to Major Activity Centers

March 2021

Level 2 (Fatal Flaws and Ranking)

- Proximity to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Technology Maturity, Design Criteria, Regulatory Approval
- Capacity, Travel Time, Compatibility with Existing Infrastructure
- Operational Considerations

Level 3 (Detailed Evaluation)

- Costs
- Potential Impacts to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Constructability/Operability

Screening Criteria by Levels

Level 1 (Ability to Meet Purpose and Need)

Primary

- Serves Downtown Dallas and Fort Worth Central Station (fatal flaw)
- Travel Time (fatal flaw)

Secondary

- Safe
- Reliable
- Convenient
- Linkages to Other High-Performance Systems in Texas
- Connect to Existing Regional/Light Rail in Dallas-Fort Worth
- Improved Access to Major Activity Centers

March 2021

Level 2 (Fatal Flaws and Ranking)

- Proximity to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Technology Maturity, Design Criteria, Regulatory Approval
- Capacity, Travel Time, Compatibility with Existing Infrastructure
- Operational Considerations

Level 3 (Detailed Evaluation)

- Costs
- Potential Impacts to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Constructability/Operability

Level 1 Screening Results

Level 1 (Primary)

Serve Downtowns of Dallas and Fort Worth?

- All 43 alignments pass

Faster Travel Time (20 mins or faster)?

- Conventional Rail: No alignments pass; eliminated from further consideration
- Higher-Speed Rail: 8 out of 43 alignments pass
- High-Speed Rail: 39 out of 43 alignments pass
- Maglev: All 43 alignments pass
- *March 2021* Hyperloop: All 43 alignments pass

Level 1 (Secondary)

Recommended eliminating from further considerations:

- All Trinity Railway alignments
- All West Fork Trinity River alignments
- All SH 303 alignments
- Five IH-30 alignments
- Two SH 180 alignments

Recommending only IH-30 (12 alignments) and SH 180 (11 alignments) corridors be carried forward into Level 2 screening

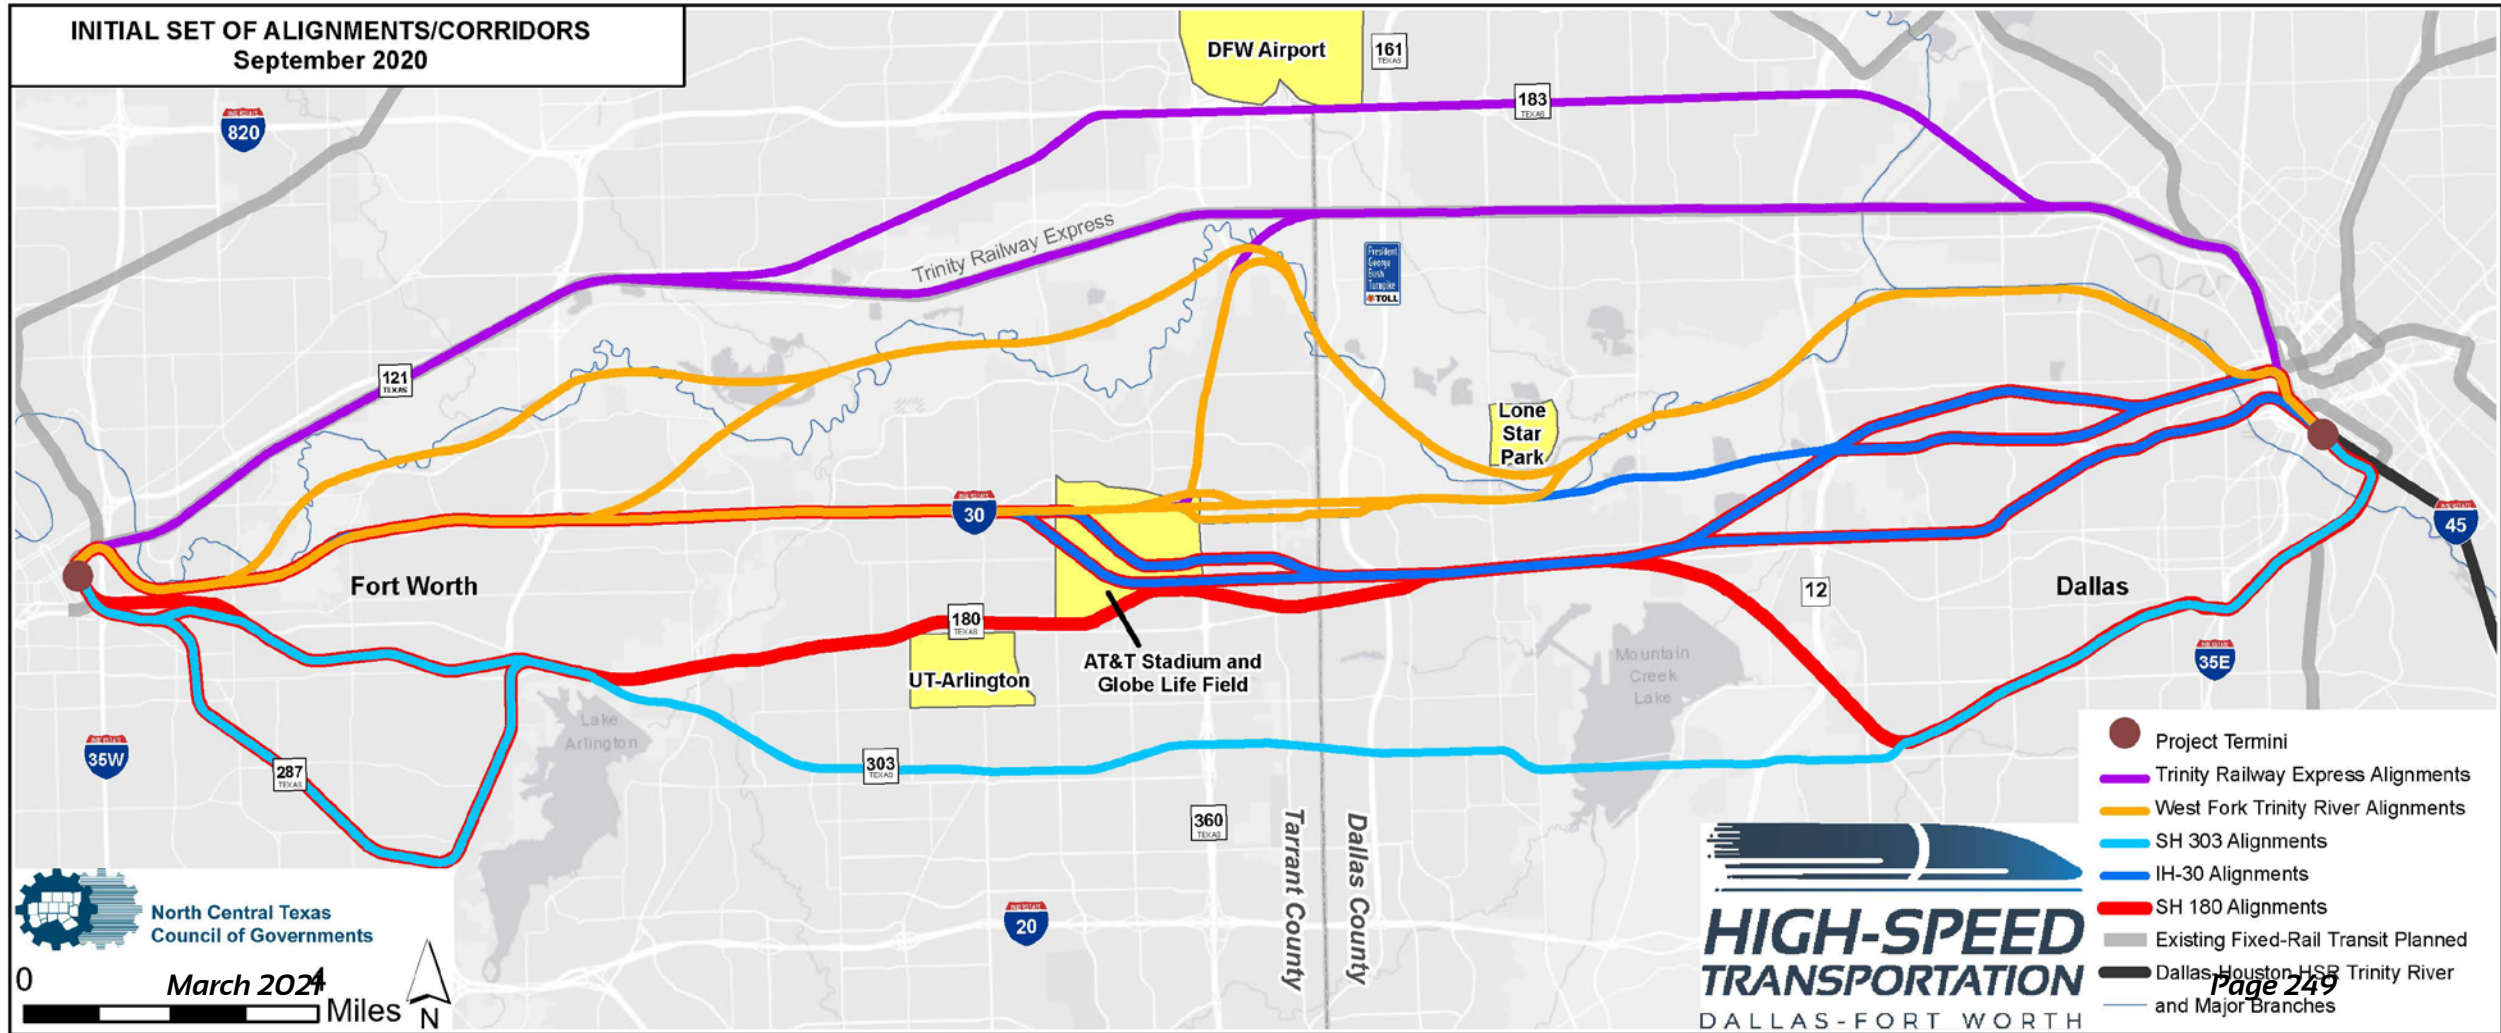

Level 1 Screening Results (Alignments)

Criteria		Description	TRE Alignments					West Fork Trinity River Alignments					
			1	2	3	4	5	6	7	8	9	10	11
Purpose & Need Criteria	Safe	Number of infrastructural challenges to building a closed corridor.	Low	Low	Low	Low	Low	Med	Low	Low	Low	Low	Low
	Convenient	Ease of access to other existing and planned transportation options (roadways, trails, existing Park & Rides, etc.)	High	High	High	High	High	High	High	High	High	High	High
	Connect to existing regional/light rail in DFW	Could the alternative provide connections to existing light, regional, and commuter rail	High	High	High	High	High	High	High	High	High	High	High
	Improved access to major activity centers	Does the alignment and/or technology offer the potential for mid-alignment station alternatives access to major activity centers (e.g., 2,000+ employment in an area, activity areas significant to the community, etc.) within 1/4 mile of each alignment in the middle portion of the study area (between Loop 12 and 820)?	High	Med	Low	Low	Med	Low	Low	Med	Med	Med	Med
March 2021		Advance alignment into Level 2 Screening (yes/no)?	No	No	No	No	No	No	No	No	No	No	No

		IH-30 Alignments																		
Criteria	Description	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28		
Purpose & Need Criteria	Safe	Number of infrastructural challenges to building a closed corridor.	Med	Med	Med	Med	Low	Med	Med	Low	Low	Med	Med	Low	Med	Med	Med	Low	Med

Initial Set of Alignments/Corridors

Alignment/Corridor Recommendations based on Level 1 Screening

Level 1 Screening Results (Mode)

Criteria		Description	Higher-Speed Rail	High-Speed Rail	Maglev	Hyperloop
Purpose & Need Criteria	Safe	Have design and safety guidelines been established (Foreign or Domestic)?	High	Med	Med	Low
	Reliable	Can the alternative mode perform reliably under all most routinely occurring North Texas weather conditions (yes/no)?	High	High	High	High
		Can the alternative mode perform reliably under all traffic conditions (rail or roadway) on this alignment (yes/no)?	High	High	High	High
	Convenient	Passenger Experience (comfort with technology paradigm)	High	High	High	Low
		Technology Convenience	Low	High	High	High
	Linkages to other high-performance systems in Texas	Ease of transfer to Dallas-Houston HSR	Med	High	Med	Med
		Ease of transfer to FW-Laredo System	Med	Med	Med	Med
		Long Distance Capability/Expandability	High	High	High	High
	Advance alignment into Level 2 Screening (yes/no)?			Yes	Yes	Yes

Screening Criteria by Levels

Level 1 (Ability to Meet Purpose and Need)

Primary

- Serves Downtown Dallas and Fort Worth Central Station (fatal flaw)
- Travel Time (fatal flaw)

Secondary

- Safe
- Reliable
- Convenient
- Linkages to Other High-Performance Systems in Texas
- Connect to Existing Regional/Light Rail in Dallas-Fort Worth
- Improved Access to Major Activity Centers

March 2021

Level 2 (Fatal Flaws and Ranking)

- Proximity to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Technology Maturity, Design Criteria, Regulatory Approval
- Capacity, Travel Time, Compatibility with Existing Infrastructure
- Operational Considerations

Level 3 (Detailed Evaluation)

- Costs
- Potential Impacts to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Constructability/Operability

Page 252

Level 2 Screening Results

Alignments

- IH-30 Alignments
 - Seven of 12 alignments carried forward into Level 3 screening
 - Six of the seven alignments combined into two alignments
- SH 180 Alignments
 - Three of 11 alignments carried forward into Level 3 screening

Modes

- Higher-speed rail eliminated from further consideration
- High-speed rail, maglev, and hyperloop carried forward into Level 3 evaluation

Next Evaluation & Design Steps

Evaluation Methodology

DFW HIGH-SPEED TRANSPORTATION CONNECTIONS STUDY

Screening Criteria by Levels

Level 1 (Ability to Meet Purpose and Need)

Primary

- Serves Downtown Dallas and Fort Worth Central Station (fatal flaw)
- Travel Time (fatal flaw)

Secondary

- Safe
- Reliable
- Convenient
- Linkages to Other High-Performance Systems in Texas
- Connect to Existing Regional/Light Rail in Dallas-Fort Worth
- Improved Access to Major Activity Centers

March 2021

Level 2 (Fatal Flaws and Ranking)

- Proximity to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Technology Maturity, Design Criteria, Regulatory Approval
- Capacity, Travel Time, Compatibility with Existing Infrastructure
- Operational Considerations

Level 3 (Detailed Evaluation)

- Costs
- Potential Impacts to Sensitive Social, Biological, or Cultural Areas
- Potential Community Impacts
- Constructability/Operability

Page 263

Level 3 Screening – Draft Criteria

Criteria		Description
Costs	Construction (capital) cost per mile	Construction cost for the guideway, ancillary facilities, maintenance facilities and vehicles
	Annual operations and maintenance cost per mile	Annual operations and maintenance cost per mile, based on industry information
	Modifications to existing infrastructure	Capital costs associated with modifications to existing infrastructure to accommodate the alternative
Potential Impacts to Sensitive Social, Biological, or Cultural Areas	Total length of water body and floodplain crossings	Total length (linear feet) of alignment that crosses a water body or floodplain
	Acres of wetland within proposed right-of-way	Total acres of wetland within the proposed right-of-way
	Number of potential structures displaced	Number of potential structures displaced (house, outbuildings, business, billboards, etc.)
	Acres of parks impacted	Total acres of parks within proposed right-of-way
	National and state historic sites potentially impacted	Number of national and state historic sites potentially impacted

Level 3 Screening – Draft Criteria

Criteria		Description
Potential Community Impacts	Noise & Vibration	Number of sensitive receivers within 500 feet (250 feet on each side of centerline)
	Visual/Aesthetics	Number of potential visual/aesthetic impacts within 500 feet (250 feet on each side of centerline)
	Community Facilities	Number of potential community facilities impacted (positive or negative)
	Environmental Justice	Potential impacts on minority or low-income populations (positive or negative)
Constructability/Operability	Constructability	Potential impact to existing parallel transportation systems during construction
	Travel Time	Travel time between Downtown Dallas (high-speed rail station) and Downtown Fort Worth (Central Station) for each alignment/mode combination
	Required non-public right-of-way	Total acres of new or non-public right-of-way needed
	Technology maturity (safety systems)	Technology Readiness Levels for safety systems requirements including emergency response, ventilation, fire life safety, etc.
	Technology maturity (operations systems)	Technology Readiness Levels for operational systems requirements including signaling, autonomous vehicle operations, control systems, etc.

March 2021

Initial Design Process

- Develop initial design for corridors advancing to Level 3 Screening
- Develop alignments within each corridor for Transportation Technology Modes advancing through Level 2 Screening
- Anticipated completion by the end of March 2021
- Used to support Level 3 Screening

Public and Agency Engagement

Public and Agency Engagement (Past and Recurring)

- Elected Officials Meetings
- Federal Transit Administration/Federal Railroad Administration Progress Meetings
- Technical Work Group Meetings
- Technology Forum
- Public Meeting #1
- Resource Agency Meeting

Public Meeting #1 Summary

- Meeting Dates: Sept 23, 2020 at noon and Sept 24, 2020 at 6:00 pm
- 129 participants total during online meetings
- 25 Comments received at meetings
 - Majority of comments were on preference on the type of transportation technology
 - Multiple comments indicating the route should follow an existing roadway
 - Various comments were received about the process and if the presentation could be available after the meeting
- Summary of the meetings, including comments and response is available at: www.nctcog.org/dfw-hstcs under >> Project Information >> Public Meeting Information

Additional Outreach

- Project team is available to speak at events or to groups within the project study area
- Please contact us with meeting requests or outreach suggestions!

HIGH-SPEED

TRANSPORTATION

Dallas-Fort Worth

01.27.2021 y 01.28.2021 Reunión Pública #2

March 2021

Page 276

Agenda

- Bienvenida/Introducciones Kevin Feldt, NCTCOG
- Descripción General del Proyecto Ian Bryant, HNTB
- Proceso de Selección y Resultados Nivel 1 y 2 Ian Bryant, HNTB
- Próximos Pasos de Evaluación y Diseño Chris Masters, HNTB
- Participación Pública y de Agencia Rebekah Hernandez, NCTCOG
- Comentarios Públicos Todos

Propósito de las Reuniones de Enero

- Revisar los resultados del proyecto del nivel 1 y nivel 2 de las alineaciones y tecnologías
- Mostrar las recomendaciones para las alineaciones y las tecnologías que se examinarán en el nivel 3
- Obtener su opinión sobre los resultados y recomendaciones

Descripción General del Proyecto

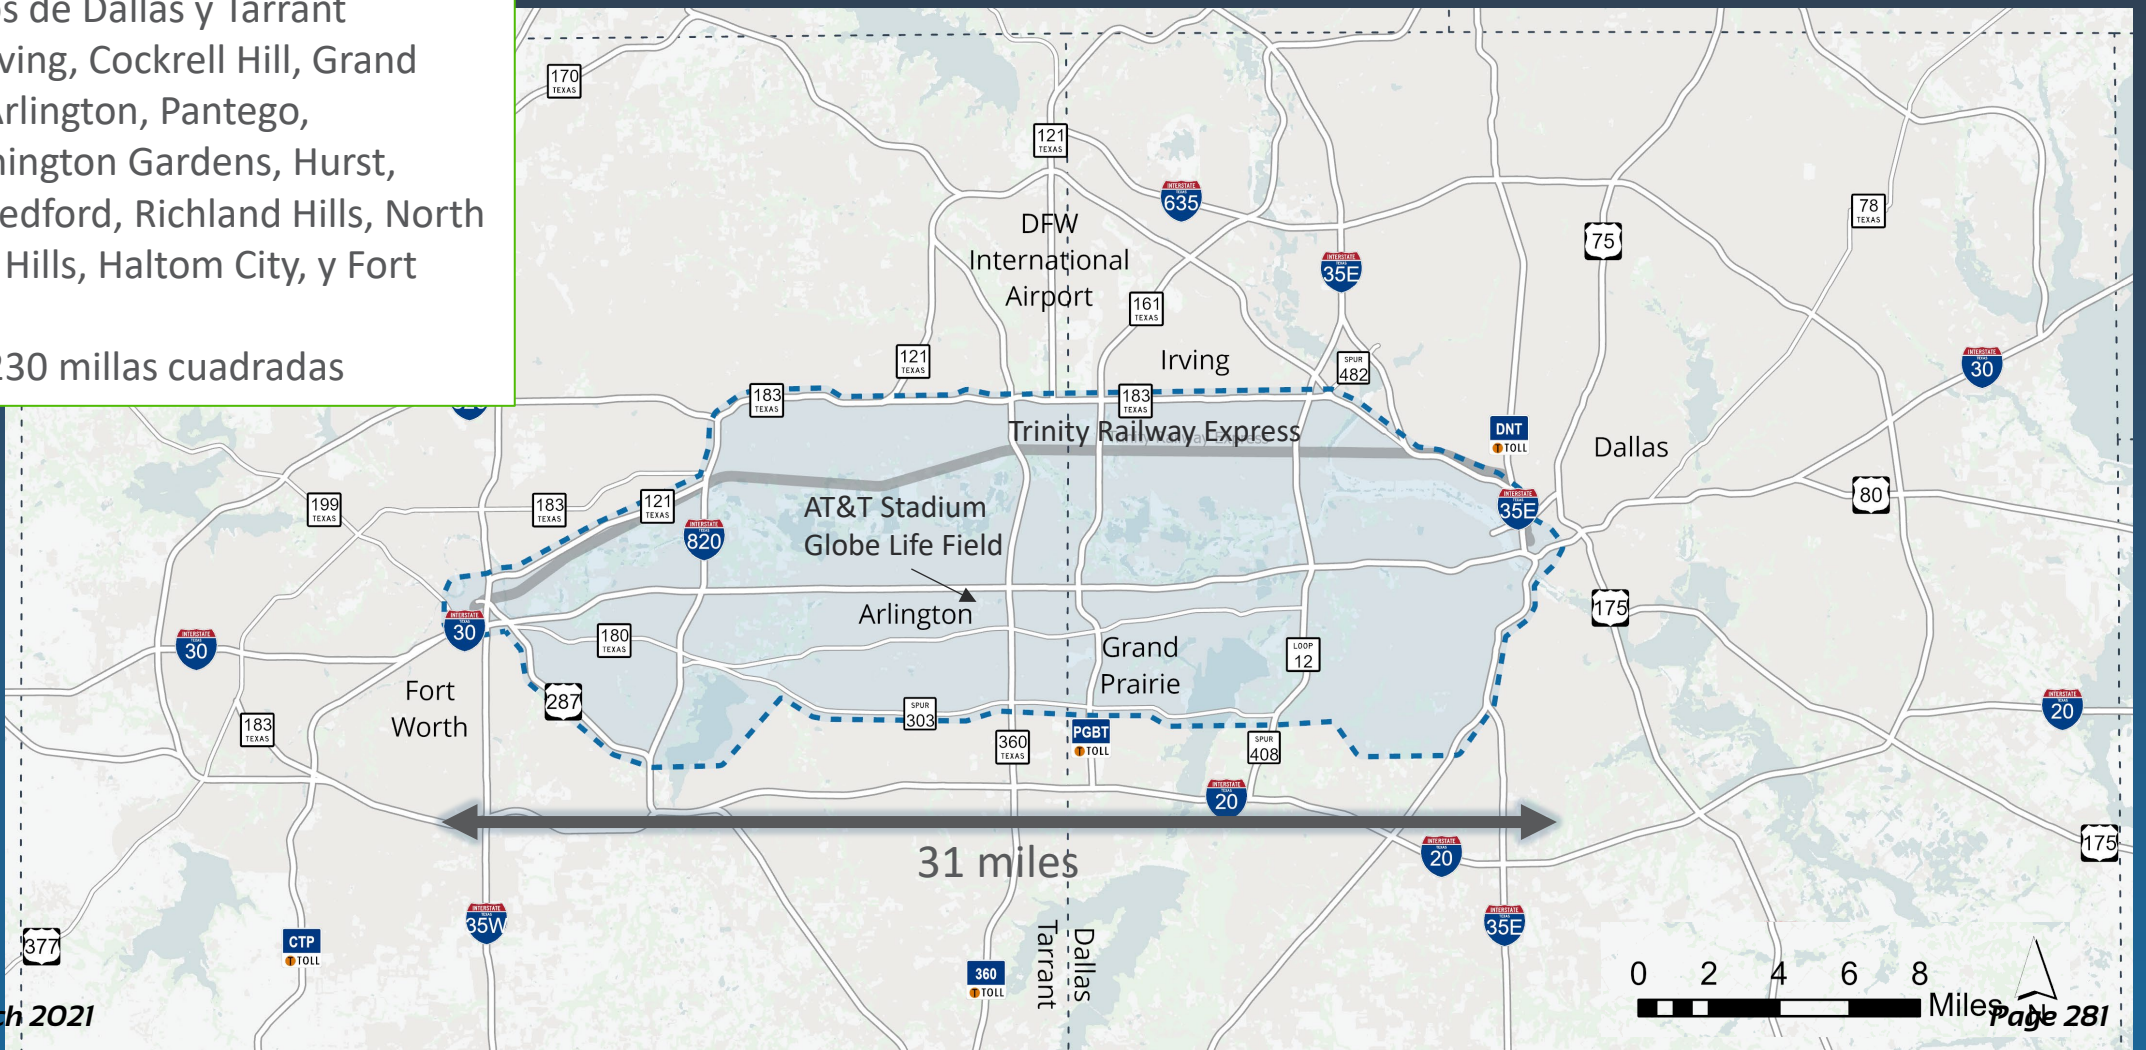

Los Objetivos de este Estudio

- Evaluar las alternativas de transporte de alta velocidad (tanto alineaciones y tecnología) para:
 - Conectar Dallas-Fort Worth con otros sistemas de pasajeros de alto rendimiento propuestos en el estado
 - Mejorar y conectar el sistema de transporte regional de Dallas-Fort Worth
- Obtener la aprobación ambiental federal de la alternativa viable

Área de Estudio

El área de estudio atraviesa:

- Condados de Dallas y Tarrant
- Dallas, Irving, Cockrell Hill, Grand Prairie, Arlington, Pantego, Dalworthington Gardens, Hurst, Euless, Bedford, Richland Hills, North Richland Hills, Haltom City, y Fort Worth
- Más de 230 millas cuadradas

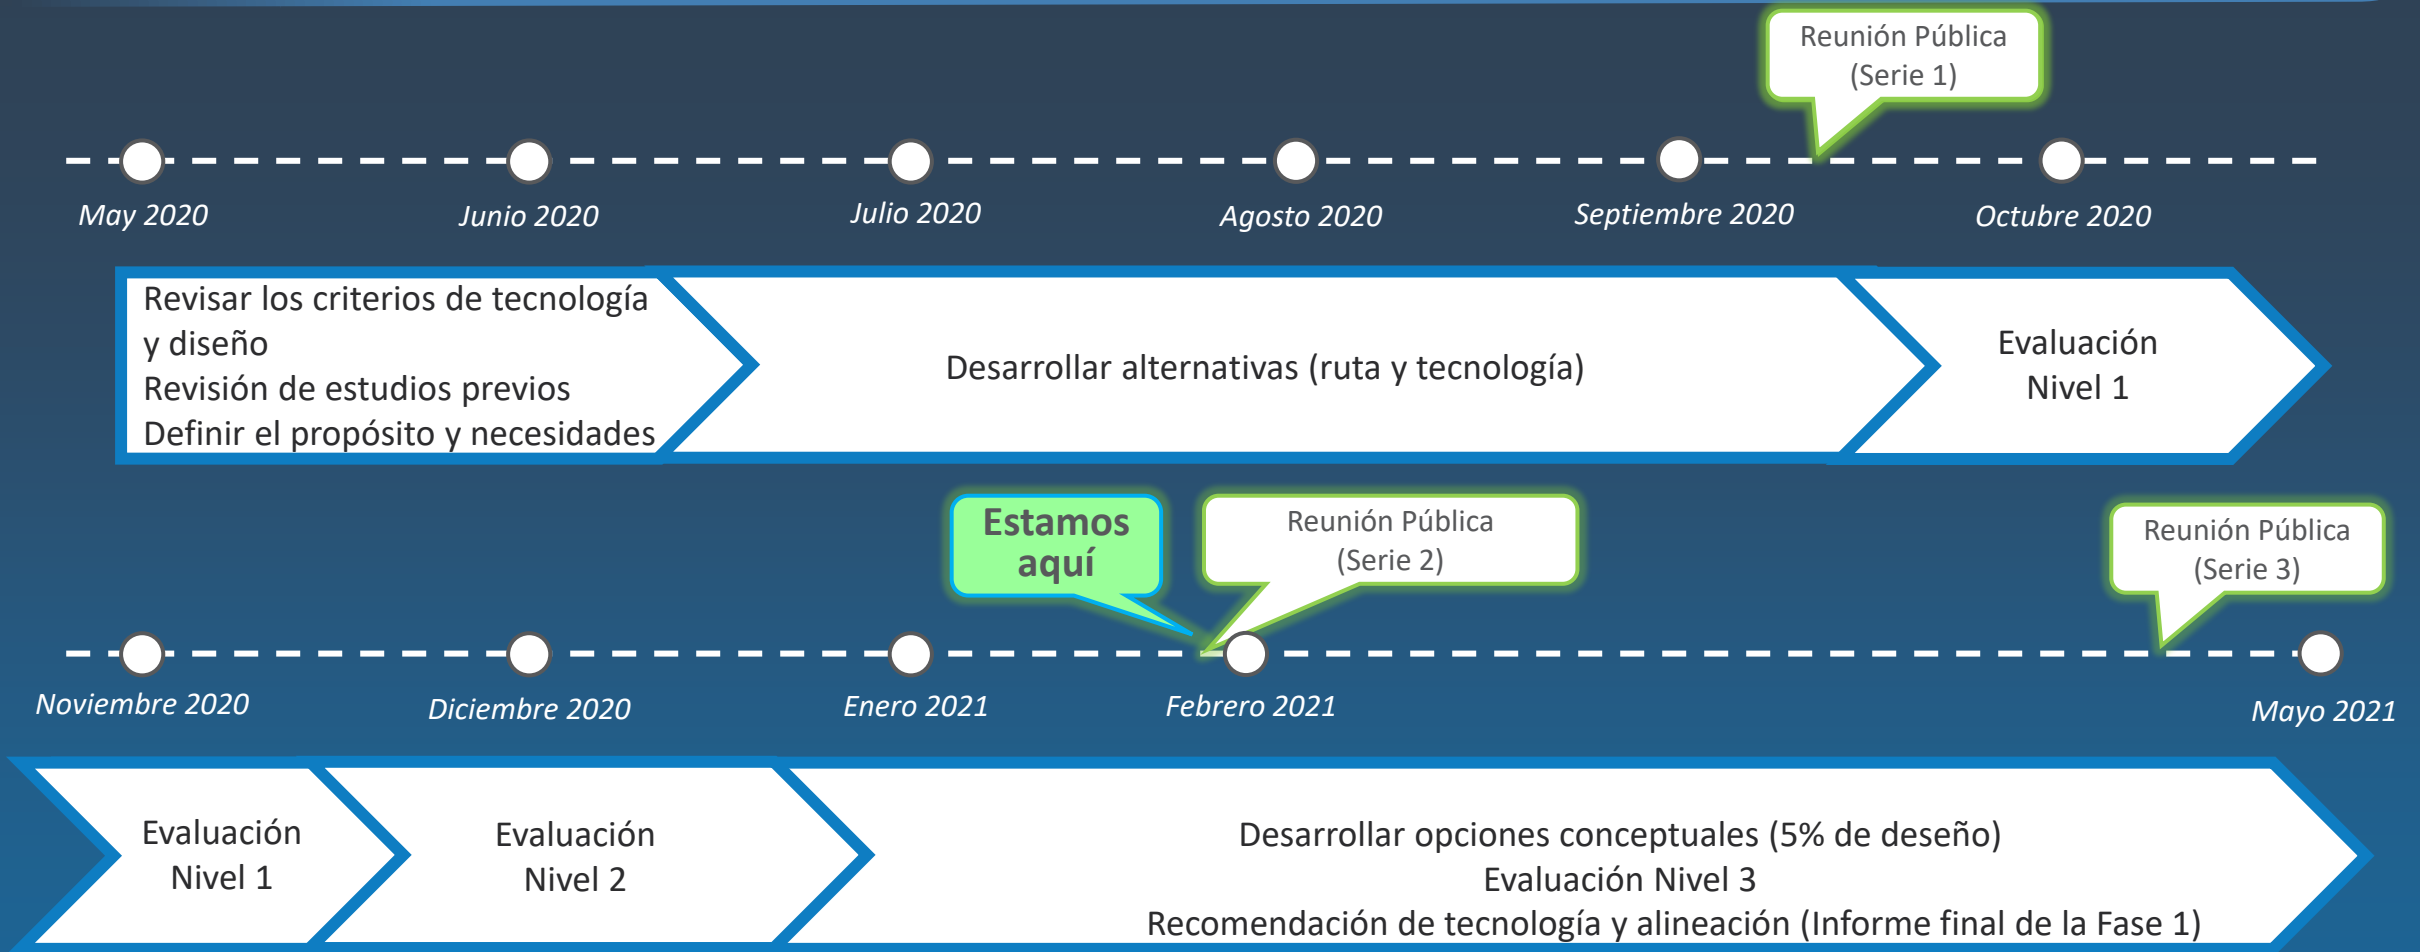

Propósito Preliminar del Proyecto

Conectar el centro de Dallas y el centro de Fort Worth con un servicio ferroviario interurbano de pasajeros de alta velocidad o una tecnología avanzada de transporte terrestre de alta velocidad

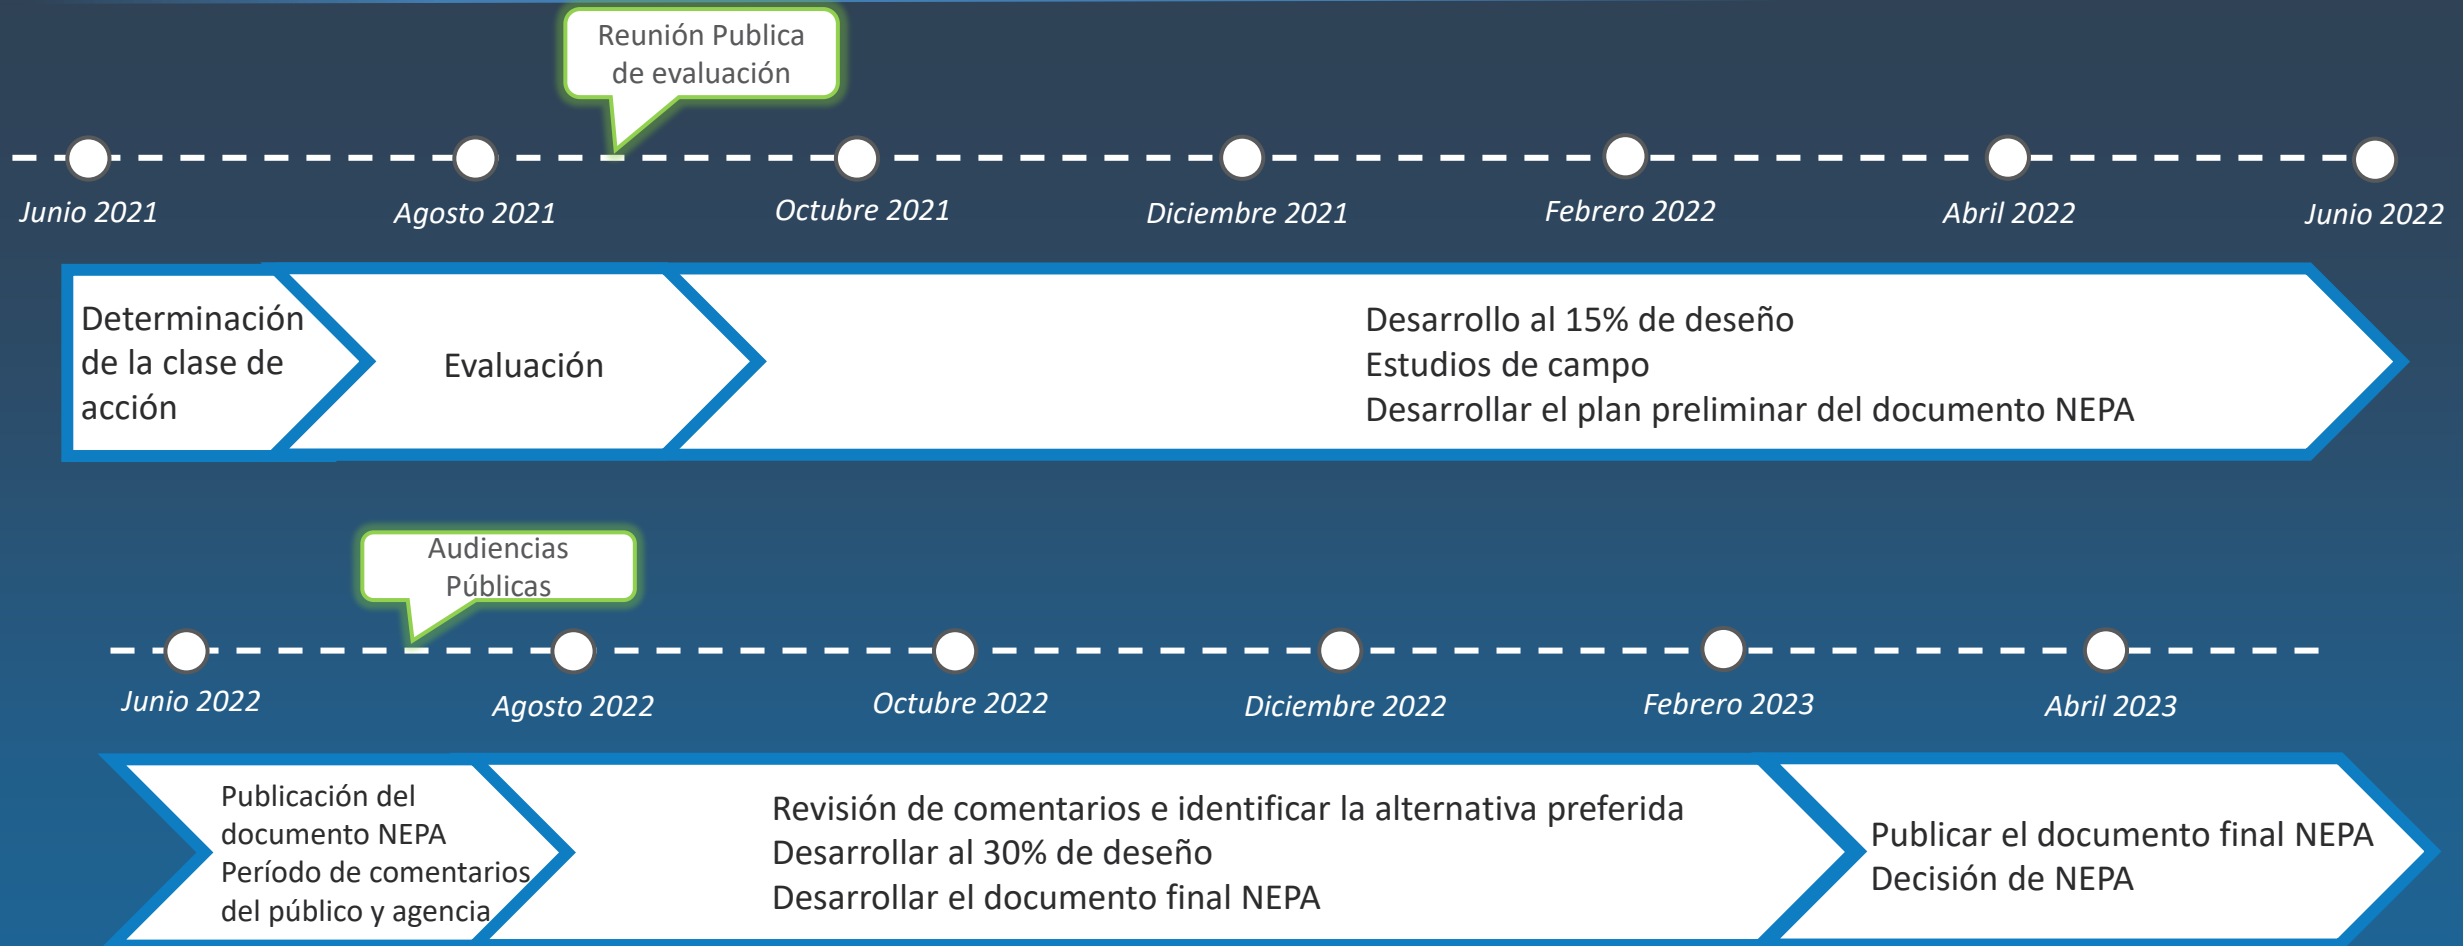

Para obtener información más detallada, visite: www.nctcog.org/dfw-hstcs

Programación de la Fase 1 – 12 Meses

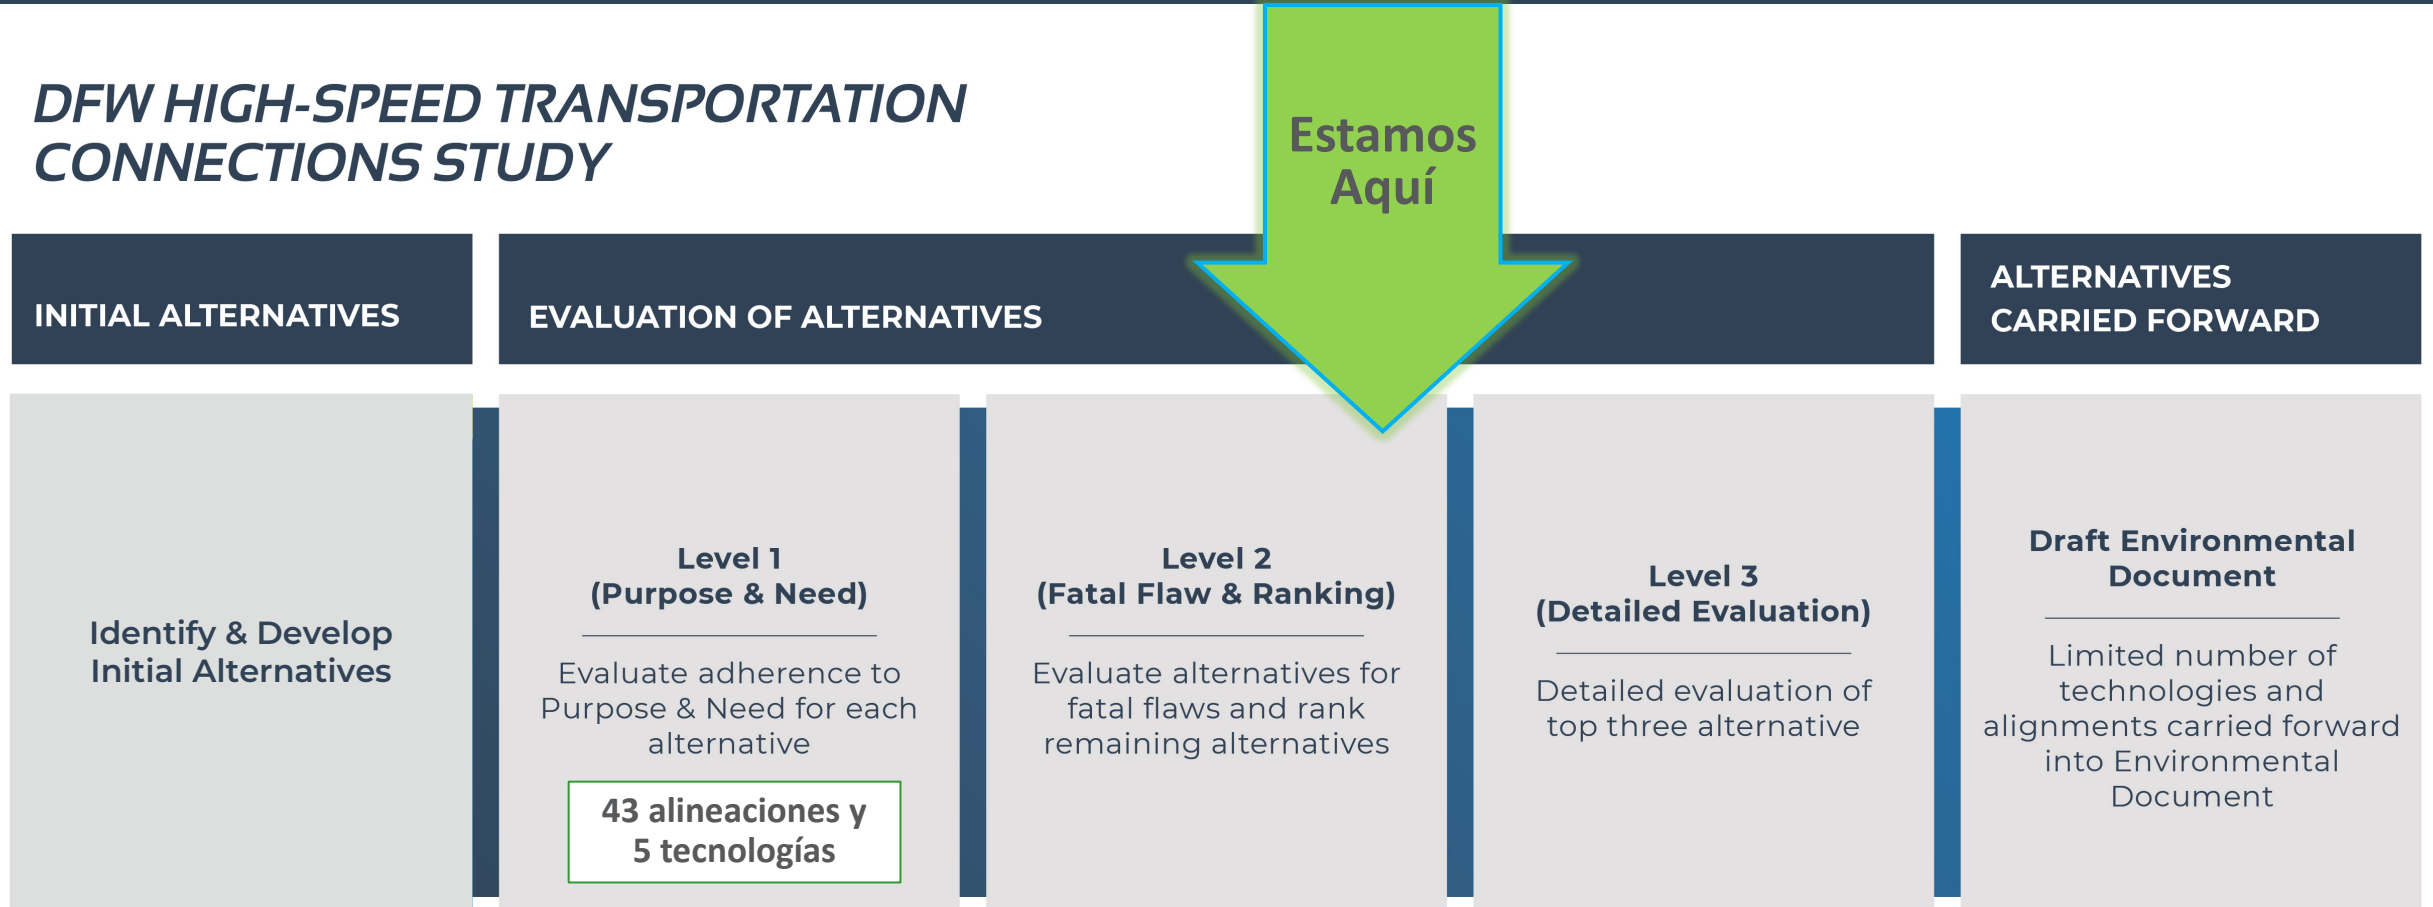

Programación de la Fase 2 – 24 Meses

Proceso de Selección y Resultados Nivel 1 y 2

Metodología de Evaluación

DFW HIGH-SPEED TRANSPORTATION CONNECTIONS STUDY

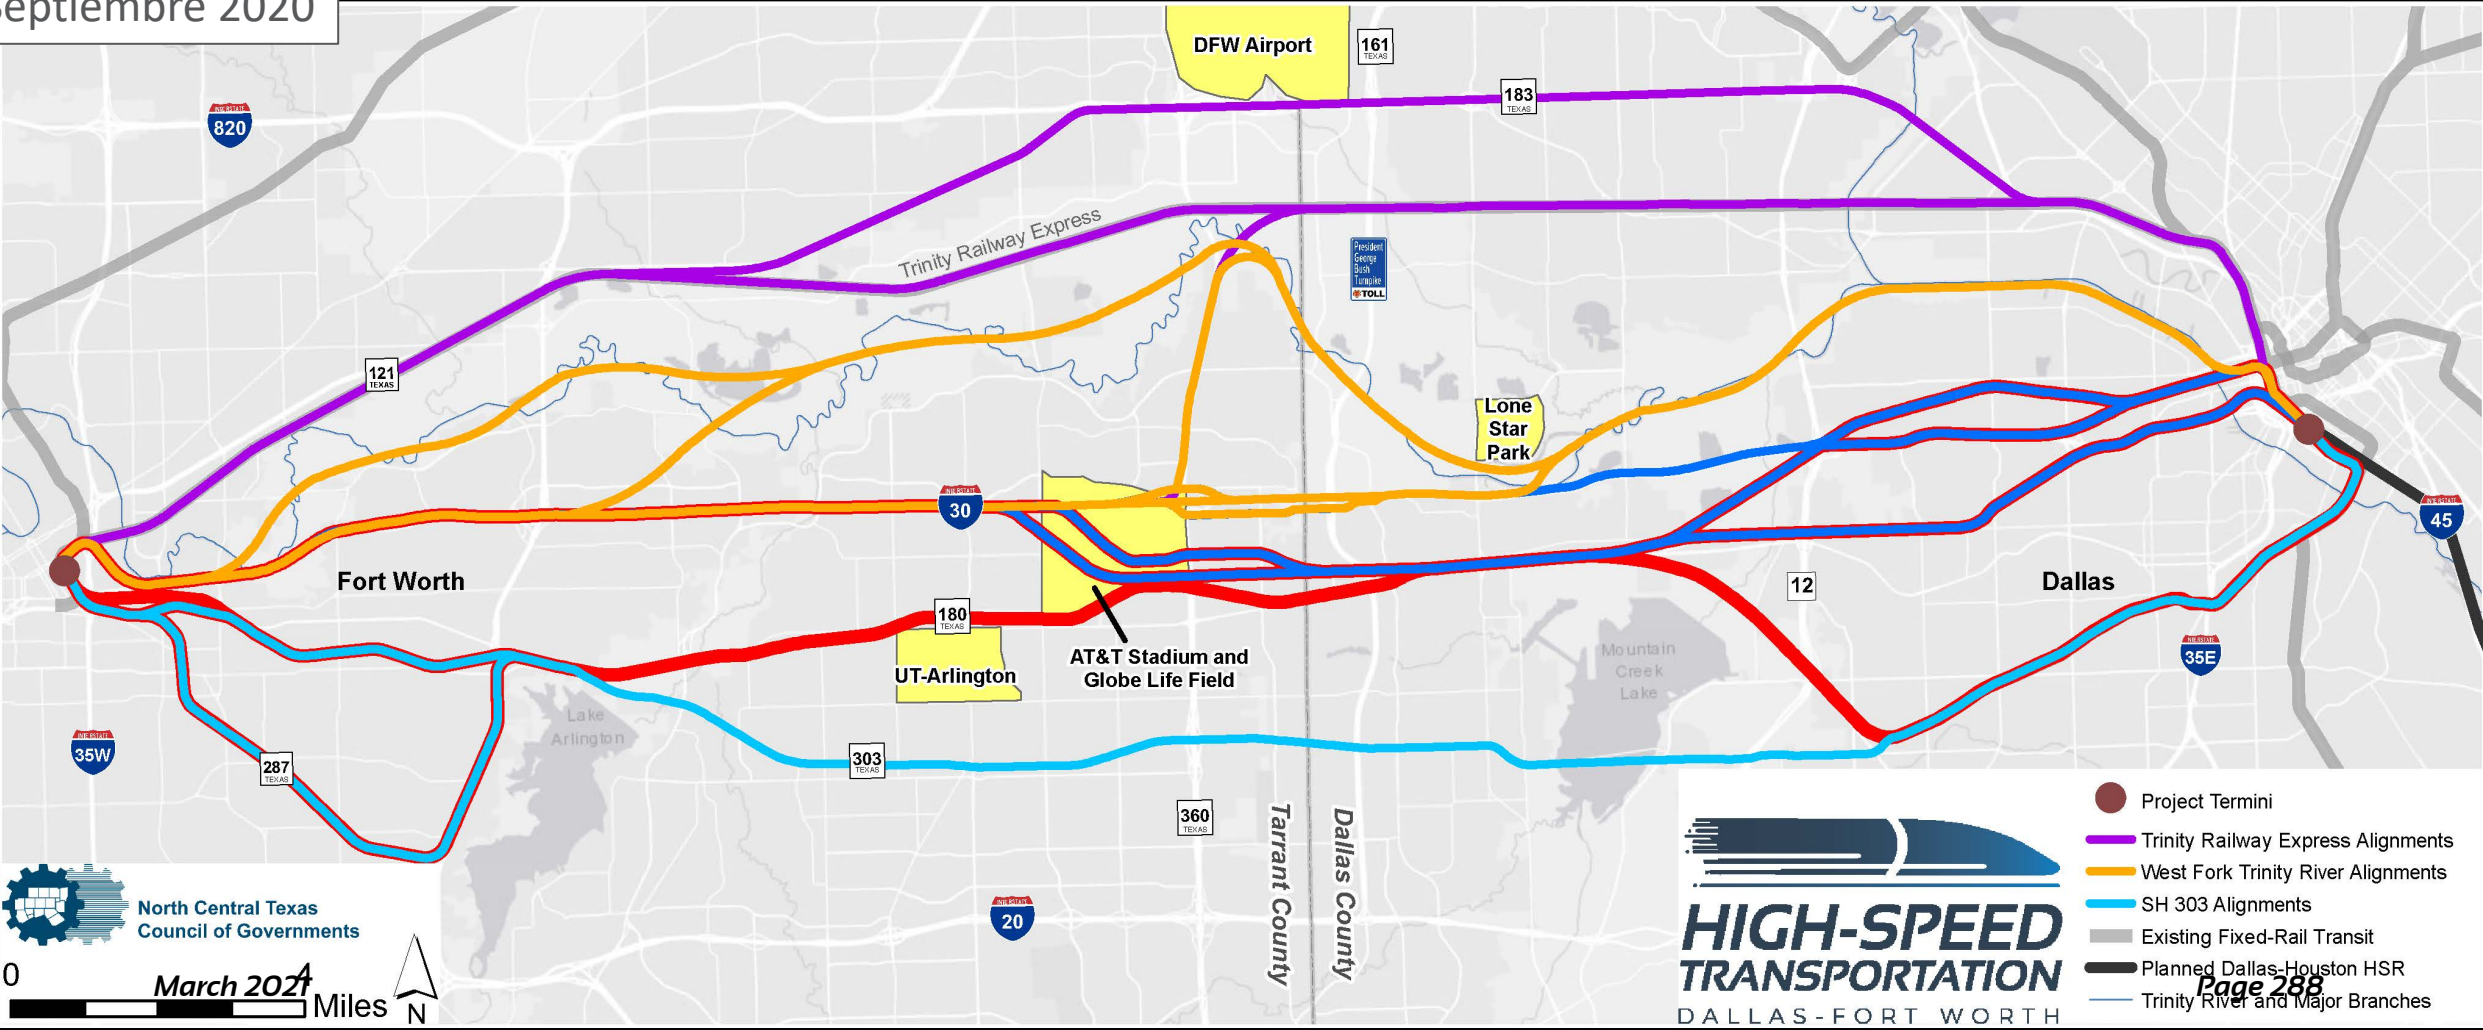

Alineaciones Iniciales /Corredores

- Alineaciones iniciales desarrolladas en base a estudios previos
- Tratando de utilizar los corredores de transporte existentes
- El derecho de paso puede ser público o privado, dependiendo del método utilizado para la entrega del proyecto
- Todas las alineaciones conectan con la propuesta estación de tren de alta velocidad de Dallas y el Fort Worth Central Station

Conjunto Inicial de Alineaciones y Corredores

Criterios de Selección por Niveles

Nivel 1 (Capacidad para Cumplir con el Propósito y necesidad)

- Primario
- Sirve la estación del Centro de Dallas y el Fort Worth Central Station(defecto fatal)
- Tiempo de viaje (defecto fatal)
- Secundario
- Seguro
- Confiable
- Conveniente
- Vincular con otros sistemas de alto rendimiento en Texas
- Conectar el Tren Regional/Ligero Existente en Dallas-Fort Worth
- Mejor Acceso a Principales Centros de Actividad

March 2021

Nivel 2 (Defectos Fatales y Clasificación)

- Proximidad en áreas Sociales, Biológicas, o Culturales sensibles
- Impactos Potenciales en la Comunidad
- Aprobación de Madurez de Tecnología, Criterios de Diseño, Aprobación Regulatoria
- Capacidad, Tiempo de Viaje, Compatibilidad con la Infraestructura existente
- Consideraciones Operacionales

Nivel 3 (Evaluación Detallado)

- Costos
- Impactos potenciales en áreas Sociales, Biológicas, o Culturales sensibles
- Impactos Potenciales en la Comunidad
- Constructibilidad/Operabilidad

Criterios de Selección por Niveles

Nivel 1 (Capacidad para Cumplir con el Propósito y necesidad)

- Primario
- Sirve la estación del Centro de Dallas y el Fort Worth Central Station(defecto fatal)
- Tiempo de Viaje Competitivo (defecto fatal)
- Secundario
- Seguro
- Confiable
- Conveniente
- Vincular con otros Sistemas de alto rendimiento en Texas
- Conectar el Tren Ligero/Regional Existente en Dallas-Fort Worth
- Mejor acceso a los principales centros de actividad

Nivel 2 (Defectos Fatales y Clasificación)

- Proximidad en áreas Sociales, Biológicas, o Culturales sensibles
- Impactos Potenciales en la Comunidad
- Aprobación de Madurez de Tecnología, Criterios de Diseño, Aprobación Regulatoria
- Capacidad, Tiempo de Viaje, Compatibilidad con la Infraestructura existente
- Consideraciones Operacionales

Nivel 3 (Evaluación Detallado)

- Costos
- Impactos potenciales en áreas Sociales, Biológicas, o Culturales sensibles
- Impactos Potenciales en la Comunidad
- Constructibilidad/Operabilidad

Nivel 1 Resultados de Selección

Nivel 1 (Primario)

¿Servir los Centros de Dallas y Fort Worth?

- Las 43 alineaciones pasan

¿Un tiempo de Viaje más rápido (20 minutos o más)?

- Tren Convencional: No pasan las alineaciones; eliminando de una consideración adicional
- Tren de Mayor Velocidad: 8 de 43 alineaciones pasan
- Tren de Alta Velocidad: 39 de 43 alineaciones pasan
- Maglev: Todas las 43 alineaciones pasan

Nivel 1 (Secundario)

Se recomienda eliminar de otras consideraciones:

- Todas las alineaciones de Trinity Railway
- Todas las alineaciones de West Fork Trinity River
- Todas las alineaciones de SH 303
- Cinco alineaciones IH-30
- Dos alineaciones SH 180

Recomendar que sólo los corredores IH-30 (12 alineaciones) y SH 180 (11 alineaciones) se trasladen a la evaluación Nivel 2

Nivel 1 Resultados de Selección (Alineaciones)

Criterio	Descripción	Alineaciones TRE					Alineaciones WFTR							
		1	2	3	4	5	6	7	8	9	10	11		
Criterios de Propósito y Necesidad	Seguro	Número de desafíos de infraestructura para construir un corredor cerrado.	Bajo	Bajo	Bajo	Bajo	Bajo	Medio	Bajo	Bajo	Bajo	Bajo	Bajo	Bajo
	Conveniente	Facilidad de acceso transporte a otras opciones de transporte existentes y planificadas (carreteras, senderos, Park & Rides existentes, etc.)	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto
	Conectar el tren regional/ligero existente en DFW	Podrá la alternativa proporcionar conexiones al tren ligero, regional, y de cercanías existentes	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto	Alto
	Mejor acceso a los principales centros de actividad	¿Ofrece la alineación y/o la tecnología el potencial para el acceso de alternativas de estación de alineación media a los principales centros de actividad (ej. más de 2,000 empleos en un área, áreas de actividad significantes para la comunidad, etc.) dentro de 1/4 de milla de cada alineación en la porción media del área de estudio (entre Loop 12 y 820)?	Alto	Medio	Bajo	Bajo	Medio	Bajo	Bajo	Medio	Medio	Medio	Medio	Medio
March 2021		¿Avanzar la alineación con la selección de Nivel 2 (si/no)?	No	No	No	No	No	No	No	No	No	No	No	No

Criterios de Selección por Niveles

Level 1 (Ability to Meet Purpose and Need)

- Primario
- Sirve la estación del Centro de Dallas y el Fort Worth Central Station(defecto fatal)
- Tiempo de viaje (defecto fatal)
- Secundario
- Seguro
- Confiable
- Conveniente
- Vincular con otros sistemas de alto rendimiento en Texas
- Conectar el Tren Regional/Ligero Existente en Dallas-Fort Worth
- Mejor Acceso a Principales Centros de Actividad

March 2021

Nivel 2 (Defectos Fatales y Clasificación)

- Proximidad en áreas Sociales, Biológicas, o Culturales sensibles
- Impactos Potenciales en la Comunidad
- Aprobación de Madurez de Tecnología, Criterios de Diseño, Aprobación Regulatoria
- Capacidad, Tiempo de Viaje, Compatibilidad con la Infraestructura existente
- Consideraciones Operacionales

Nivel 3 (Evaluación Detallado)

- Costos
- Impactos potenciales en áreas Sociales, Biológicas, o Culturales sensibles
- Impactos Potenciales en la Comunidad
- Constructibilidad/Operabilidad

Nivel 2 Resultados de Selección

Alineaciones

- Alineaciones IH-30
 - Siete de 12 alineaciones se trasladaron a la evaluación de Nivel 3
 - Seis de siete alineaciones combinadas en dos alineaciones
- Alineaciones SH 180
 - Tres de 11 alineaciones se trasladaron a la evaluación Nivel 3

Modos

- Se elimina el Tren de Mayor Velocidad de la consideración adicional
- Tren de Alta Velocidad, Maglev, y Hyperloop se trasladan a la evaluación de Nivel 3

APPENDIX D. VISUALS HANDOUTS

Preliminary Draft Purpose and Need

1/20/2021

Project Purpose

The purpose of the Dallas-Fort Worth High-Speed Transportation Connections project is to create high-speed intercity passenger rail service or an advanced high-speed ground transportation technology connecting downtown Dallas and downtown Fort Worth, while providing linkages to other developing high-performance passenger rail systems in Texas. Specifically, the project will provide a link between the proposed high-speed rail service between Dallas and Houston on the east and high-speed passenger services linking Fort Worth to south Texas metropolitan areas on the west. The project is being developed to:

- Provide a safe, convenient, efficient, fast, and reliable alternative to existing ground transportation travel options;
- Advance the state high-performance rail transportation network by linking the Dallas-Fort Worth region with other planned high-performance passenger rail corridors/stations linking the large metropolitan areas in Texas;
- Enhance connectivity within the Dallas-Fort Worth region to existing and planned transportation services including passenger rail, automobile, pedestrian, bicycle and other services in the Dallas-Fort Worth region; and
- Support economic development opportunities in the Dallas-Fort Worth region by providing improved access to employment, education, entertainment, health, and shopping for residents of, and visitors to, the region and the State.

Project Needs

Existing and future transportation issues to be addressed by the project include:

- Expected population and employment growth will continue to increase travel demand and place greater pressure on existing transportation services
- Existing transportation network and services have unreliable and lengthy travel times
 - The existing roadway system is increasingly congested
 - Travel times on the existing passenger rail system are lengthy
- More transportation choices are needed to support:
 - Creation of and provide connectivity to the planned high-performance passenger systems connecting major metropolitan regions in Texas
 - Connectivity to and from large employment centers and major activity centers within North Central Texas

Borrador Preliminar del Propósito y Necesidad

1/21/2021

Propósito del Proyecto

El propósito del estudio Dallas to Fort Worth High Speed Transportation Connections es el de crear un servicio ferroviario de pasajeros interurbano de alta velocidad o una tecnología avanzada de transporte terrestre de alta velocidad que conecte el centro de Dallas y el centro de Fort Worth, proporcionando conexiones con otros sistemas de ferrocarril de pasajeros de alto rendimiento en Texas.

Específicamente, el proyecto proporcionará un enlace entre el servicio ferroviario de alta velocidad propuesto entre Dallas y Houston en el este y los servicios de pasajeros de alta velocidad que conectan Fort Worth con las áreas metropolitanas del sur de Texas en el oeste. El proyecto se está desarrollando para:

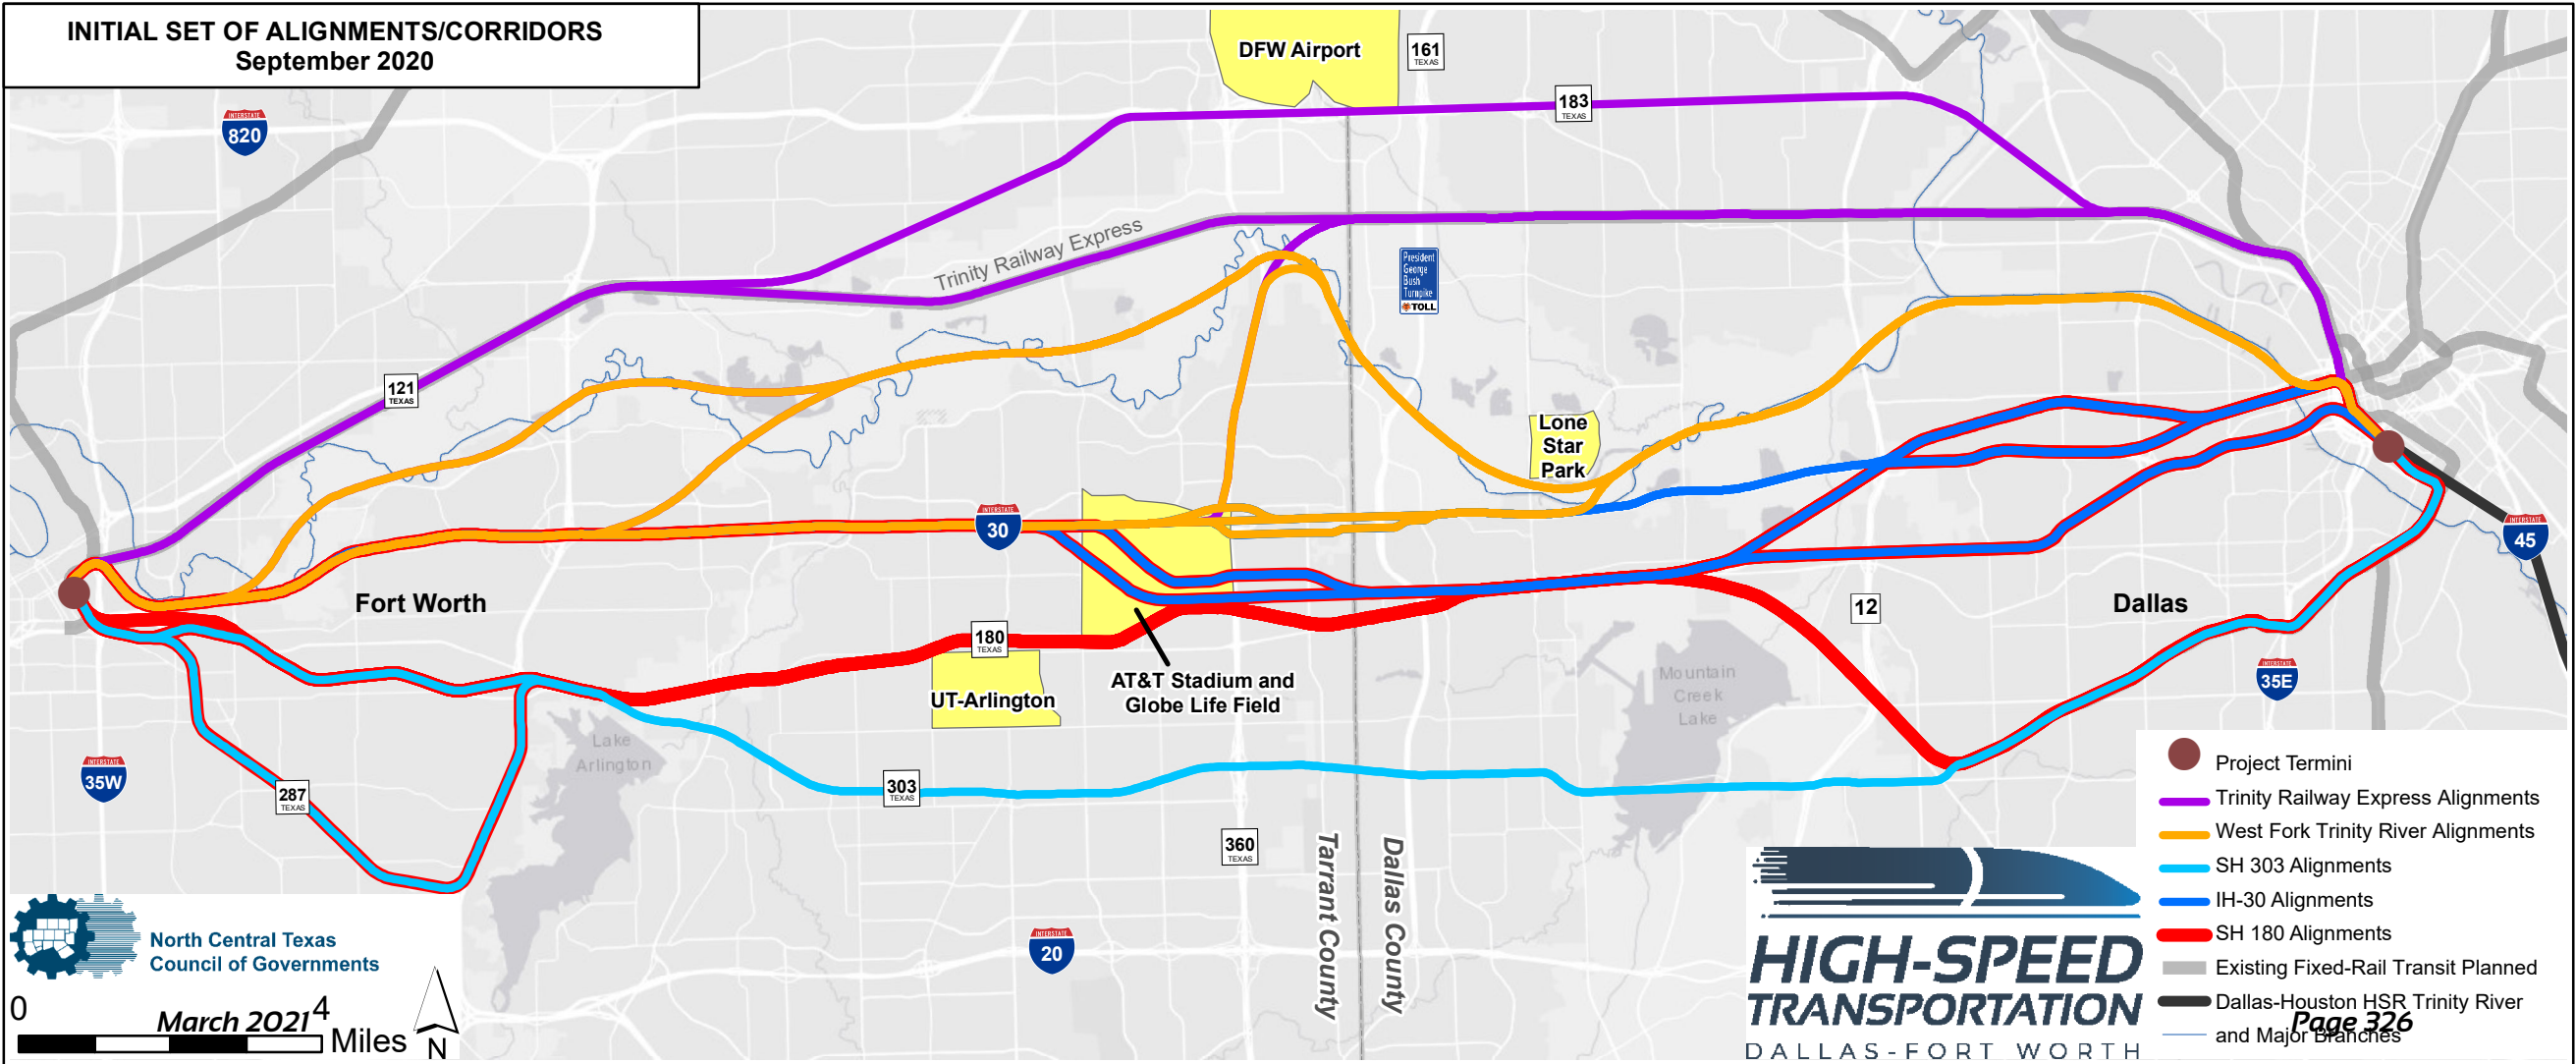

- Proporcionar una alternativa segura, conveniente, eficiente, competitiva y confiable para viajar en automóvil;
- Avanzar la red de transporte ferroviario de alta velocidad del estado uniendo la región de Dallas-Fort Worth con otros corredores/estaciones ferroviarias de pasajeros de alto rendimiento planificados que unen las grandes áreas metropolitanas de Texas;
- Mejorar la conectividad dentro de la región de Dallas-Fort Worth a los servicios del transporte existentes y planeados incluyendo servicios ferroviarios de pasajeros, de automóviles, peatonales, de bicicletas y otros servicios en la región de Dallas-Fort Worth; y
- Apoyar oportunidades de desarrollo económico en la región de Dallas-Fort Worth proporcionando un mejor acceso al empleo, la educación, el entretenimiento, a la salud, y a las compras para los residentes de, y visitantes, a la región y al estado.

Necesidades del Proyecto

Los problemas del transporte existentes y futuros que el proyecto abordará incluyen:

- El crecimiento previsto de la población y empleo que seguirán aumentando la demanda de viajes y crearán una mayor presión a los servicios de transporte existentes.
- La red y los servicios de transporte existentes tienen duración de viaje largos y poco confiables
 - El sistema de carreteras existente está cada vez más congestionado
 - La duración de viaje en el sistema ferroviario de pasajeros existente es larga
- Se necesitan más opciones de transporte para apoyar:
 - Creación de y proporcionar conectividad a los sistemas de pasajeros de alto rendimiento planeados que conectan las principales regiones metropolitanas de Texas
 - Conectividad a y desde grandes centros de empleo y principales centros de actividad dentro de North Central Texas

**APPENDIX E. LIVE MEETING TRANSCRIPTS
JANUARY 27, 2021**

Dallas-Fort Worth High-Speed Transportation Connections Study
January 27, 2021 Meeting Transcript

Michael:

(silence)

Michael:

Well welcome everyone. We're holding this public meeting electronically and we're here in Arlington, Texas at the North Central Texas county government. The team has been working really hard since the last time we met with you. This is an exciting project to build high-speed trains from East West, between downtown Dallas, coterminous with high speed rail hopefully to Houston all the way over to Fort Worth with the hope of extending high-speed rail service from Fort worth to the South at some point in the future. So we have a very dedicated team that has worked hard since last time. We got some great comments at the last public meeting. We took those to heart. We've met with a whole host of technical technology experts from all over the world since the last time we met so we are ready to go. And again, thank you representatives from homeowners groups, residents, business owners, transportation interests, logistics fans and thank you very much for participating in our meeting today. Rebecca, I guess I'll send it back over to you.

Rebecca Hernandez:

Thank you Michael. This is Rebecca Hernandez and I will pass it over to Kevin Feldt today to go over the first few slides.

Kevin Feldt:

Thank you. Good morning. Good afternoon. Good evening. My name is Kevin Feldt and I am a Program Manager here at the council of governments and I wanted to let that during this presentation, we will a cover many topics related to the study. These topics include a project overview, the alternative screening process and initial results from level one and level two screening efforts. Information pertaining to the next evaluation effort and the project conceptual design steps, information on public and agency engagement efforts as well as provide comments about the project. There are three primary purposes for the meeting today. The project team will provide the results from the first two levels of screening analysis for both technologies and alignments, identify project team recommendations to be used in the level three screening process and receive public comments and input regarding the project team recommendations.

Kevin Feldt:

The next section, we'll discuss the project overview focused on the project study area and schedule. The primary project objective is to evaluate high-speed transportation technology options between downtown Dallas and downtown Fort Worth. This includes analyzing both alignment and transportation mode options between the two cities. The objective includes finding ways to connect the Dallas, Fort Worth region to other proposed high-performance passenger systems in Texas. Also the project will investigate ways to enhance connections to the regional transportation systems, including automobile, bus, rail, bicycle, and pedestrian networks. An additional objective is to obtain federal environmental approval to design and implement the project.

Kevin Feldt:

The stated objectives will be analyzed in the study areas shown on this map. This area is generally bounded by state highway 121 and state highway 183 to the North, interstate highway 35E to the East, downtown Fort Worth to the West, and United States highway 287 and state highway 303 to the South. One of the initial tasks for this type of study is to develop a description of the project purpose which addresses the project objectives. The preliminary project purpose is to connect downtown Dallas and downtown Fort Worth with high-speed intercity city passenger rail service or an advanced high-speed ground transportation technology to provide an alternative to travel by automobile, to advance the state high performance rail transportation network, to support economic development opportunities in the Dallas Fort Worth region and to enhance connectivity. For more information regarding the preliminary project purpose, please go to our project website at nctcog.org/dfw-hstcs. From there, select the project information tab then the purpose and the document link.

Kevin Feldt:

The Dallas and Fort Worth high-speed transportation connection studies is divided into two phases. The first phase we'll analyze all reasonable alternatives regarding alignment and travel technology. The wide range of alternatives will be paired down to a small number of recommended travel technologies and a small number of alignment options to a multiple level of screening. Staff anticipates the first phase to take approximately 12 months and conclude in spring 2021. During the first phase, there will be three opportunities for the region to participate in the study through public meeting events. We previously held meetings in September, 2020, we are now having public meetings in January, 2021, and our next is tentatively scheduled for April, 2021.

Kevin Feldt:

The second phase will be engineering and environmental analysis as prescribed by the National Environmental Policy Act. The second phase will include conceptual and preliminary engineering tasks. The phase two schedule indicates beginning of the work efforts in early summer, 2021 and concluding in late spring of 2023. This 24 months schedule includes two primary public engagement events in early fall 2021 and late summer 2022. As always questions and comments are welcome throughout the entire project study. Now I'm going to turn this over to Ian Bryant who will discuss the screening process and level one and level two results.

Ian Bryant:

Thank you Kevin and good afternoon everyone. My name is Ian Bryant and I am the consultant project manager for our study. On this section we'll focus on the level one and level two screening analysis and the results. The project team is using a three-level screening process to pair down the initial large number of possible options to a select few by the end of the first study phase. The process is depicted on this graphic. The process begins with identifying all reasonable alternatives. The first level of evaluation for the alternatives is to determine if the alternative meets the project purpose and the project need. The alternatives that meet the project purpose and need then move to the second level of evaluation.

Ian Bryant:

The second level of evaluation focuses on identifying any flaws which may preclude the alternative from being built. This is where the project team is currently. This is also where we need your help. As we discuss the preliminary level two screening results, please take the time to review the results and

provide your thoughts and comments. The information gathered will be very helpful as the project team makes recommendations for alternatives to advance to the third level of screening analysis. The goal is to complete the third level of evaluation with a limited number of technologies and alignments or corridors to be evaluated in the project's second phase.

Ian Bryant:

Using previous transportation studies that examined corridors between Dallas and Fort Worth, the project team identified many possible alignments and corridors analyze. In general, the project team identified alignments and corridors along existing transportation routes as much as possible in order to minimize the need to acquire additional property. Also using existing transportation corridors would minimize impacts to homes and businesses. Each alignment and corridor option will connect the central station and downtown Fort Worth to the proposed high-speed rail station in downtown Dallas. In all, 43 distinct alignments and corridors were identified for our study. The initial 43 distinct alignments and corridors were grouped into five families of options. These five families are generally identified as the Trinity Railway Express or TRE alignments that are shown here in the purple, The Trinity River Alignments shown in gold, the IH 30 alignments and dark blue, the state highway 180 alignments, which are also very near the existing Union Pacific railroad alignment, it's shown in red and the state highway 303 alignments shown in light blue. These are the alignments and corridors the project team to analyze during the first level of screening.

Ian Bryant:

There were also several high-speed transportation technologies or modes of travel that are examined for their use to meet the region's travel needs. The initial modes of travel that we analyzed include conventional passenger rail trains, higher speed trains, which are faster than conventional trains but slower than high-speed trains, high speed rail, which are passenger trains proposed for the Dallas to Houston system, magnetic levitation or Maglev for short, train technology, and Hyperloop technology, which incorporates a passenger or cargo pod moving in a near vacuum tube. We also analyzed other emerging high-speed transportation technologies. Looking more closely at the design characteristics for each technology, it's important to understand how the footprint and profile could affect the surrounding environment, including the amount of right of way width needed.

Ian Bryant:

Typical sections of each technology give a view of the technology and its associated infrastructure required. A typical section is what could be expected to be generally built throughout the corridor. Conventional and higher speed rail typical sections are generally constructed on the ground as shown in the pictures on the previous slide. The technologies with the highest speeds require the vehicles to operate on bridge structures throughout a corridor to separate them from other roadways and rail lines. The typical sections for high speed and magnetic levitation trains, and the Hyperloop technologies are shown here.

Ian Bryant:

The three distinct levels of evaluation are shown in this graphic. The first level focused on the project objectives and purpose while the second and third levels provided increasingly more detailed evaluation criteria. The level one evaluation was aimed at determining if the alternative would meet the project purpose and need and was conducted using two screening evaluations. The primary evaluation determined if the alternative would serve both downtown Fort Worth and downtown Dallas with a

travel time faster than existing modes. The secondary evaluation in level one determined if the alternative would be safe, reliable, and convenient if it linked to other high speed transportation systems throughout Texas and connected to existing regional passenger system as well as improved access to major activity centers within the study area.

Ian Bryant:

The results of the first level of screening are shown here. Using the primary criteria, all alignments serve both downtown areas. The next part of this primary criteria screens out alignments and mode combinations that have a longer travel time between the Dallas and Fort Worth stations than at the 20 minute threshold. Using this travel time criteria, none of the 43 alignments pass the test for conventional rail. Higher speed technology has eight alignments that pass the travel time test while high-speed rail passes on 39 alignments and Maglev and Hyperloop technologies pass on all 43 alignments for travel time. Using the secondary level one screening criteria identified, many alignments were not considered further in the second level of screening analysis. In total 23 of the 43 alignments were identified for consideration and the level two screening process.

Ian Bryant:

The next few slides show the tables used to document the evaluation of the 43 alignments. The green indicates the best score, yellow medium, and red, the lowest score. These tables are available on the project website. This table shows the level one screening results associated specifically with the Trinity railway express family of alignment options and the West Fort Trinity River family of alignments. Both the TRE alignments and the West Fork Trinity River alignments scored low in the first category because of a number of challenges to build a closed system in the corridor. A closed system is grade separated and does not share track with any freight rail operations. We can come back to these tables at the end during question and answer, but I also want to point out the main takeaway here is that neither the TRE or West Fork Trinity River alignments passed into the level two screening.

Ian Bryant:

The level one screening results associated with the IH 30 family of alignment options are shown in this table. The IH 30 alignments would also have some challenges but to a much lesser degree. The main takeaway here is that the majority of the IH 30 alignments did pass the level one screening and were moved forward into level two. The level one screen results associated with the state highway 180 family of alignment options and the state highway 303 family of alignment options are shown in this table. The SH 180 alignments would also have some challenges but also to a lesser degree. SH 303 alignments would have lesser challenges to build a closed corridor but was also further away from all of the major activity centers.

Ian Bryant:

The takeaway here is that the SH 180 alignments, the vast majority passed and were taken into the level two screening and the SH 303 alignments were eliminated from further consideration. As a point of reference, this map shows all five families of initial alignment options which include all 43 distinct options between downtown Dallas and downtown Fort Worth. As mentioned earlier, 23 of the 43 alignment options pass the level one screening. These 23 alignment options are shown on this map.

Ian Bryant:

These alignment options are recommended to be further evaluated in level two and are generally in IH 30 family and the state highway 180 family of alignments. Turning to the level one screening analysis regarding transportation technologies. As mentioned previously, the conventional rail technology did not pass the level one primary screening analysis and was eliminated from further consideration. Level one screening analysis results for the higher speed, high speed, Maglev and Hyperloop transportation technologies are shown in this table. These four technologies were recommended to be further evaluated and level two. Moving on to the level two evaluation process, level two centered on determining if the alternative has any fatal flaws, meaning a concern that would prevent further development of the project using that alignment. Various conditions are examined for each alternative including proximity to environmental sensitive areas, potential community impacts, technology maturity, compatibility with existing infrastructure and operational characteristics.

Ian Bryant:

The level two screening results identified both alignment options and transportation technology options to move forward into the more detailed level three screening analysis. The results for the IH 30 alignments indicated seven of the 12 alignment options should be analyzed further. Also three of the 11 state highway 180 alignment options are identified as needing additional analysis as well. Regarding transportation technologies or modes, the level two screening suggested the higher speed technology not be analyzed further while high-speed rail, Maglev and Hyperloop technologies should be analyzed further. In addition, the new and emerging technologies initially analyzed were not recommended for consideration in the level three screening process.

Ian Bryant:

The level two screening information is shown in this table for the IH 30 alignment options. The seven alignment options with the most high scores which are shown there in green, are suggested for further analysis in the level three screening effort. The level two screening information shown in this table for the SH 180 alignment options. The three options with the most high scores, again shown in green, are suggested for further analysis and the level three screening effort. As a point of reference, this map shows the 23 alignment options passing level one screening that were analyzed and the level two screening process. This includes the IH 30 and SH 180 alignment options. As I mentioned earlier, 10 alignment options passed the level two screening analysis and are shown on this map.

Ian Bryant:

This includes the seven IH 30 options and the three SH 180 options. We really need your thoughts to make sure the project team has selected the correct alignments to analyze in this level three screening process which is upcoming. Please visit our project website to submit your thoughts and comments or feel free to share those thoughts with us here today. The level two screening information here is shown for transportation technologies that were moved forward from the level one screening into the level two screening process. The three transportation technology options with the highest scores which are shown in green are suggested for further analysis and the level three screening effort.

Ian Bryant:

As a point of reference, this graphic shows the initial transportation technologies identified for study. These include conventional rail, higher speed rail, high-speed rail, Maglev, Hyperloop and a number of emerging transportation technologies. As mentioned earlier, three transportation technologies or modes past the level two screening analysis. The remaining options recommended include high-speed

rail, Maglev and Hyperloop modes. Again, we need your thoughts to make sure the project team has selected the correct modes to analyze in the level three screening process. And with that, I will hand it over to Chris Masters to talk about next evaluation and design steps.

Chris Masters:

Hello. I'm Chris Masters, I'm the consultant deputy project manager and at this point the level one and level two screening efforts have been completed. The remaining task and the level two screening is to incorporate comments received from the public during the public comment period, which ends on February 22nd. After incorporating all the public comments the next project effort includes the level three screening process and conceptual design. The level three screening process were focused on a more detailed evaluation of the remaining alignments and transportation technology alternatives including a conceptual design process for each. The third and final evaluation level criteria includes cost estimates, potential impacts to environmentally sensitive areas and other potential community impacts and the ability to construct the proposed project in the future. As with the alignment options and transportation technology options, we need your thoughts to make sure the project team has selected the correct criteria to analyze in the level three screening process.

Chris Masters:

Please visit our project website and submit your thoughts and comments. The level three cost screening criteria are divided into three separate costs components. The description of each component is shown on the graphic. Also potential impacts to environmentally sensitive areas, the criteria is divided into five separate components. The components for both criteria, categories are scored and aggregated into one score for each criteria category. I'll now pause for you to review the criteria and the descriptions.

Chris Masters:

(silence)

Chris Masters:

The level three community impacts screening criteria are divided into four separate components. The description for each component is shown on this graphic. Also constructability and system operability criteria are divided into five separate components. The components for both of these criteria categories will be scored and aggregated into one score for each criteria category. I'll again pause for you to review the criteria and descriptions.

Chris Masters:

(silence)

Chris Masters:

In conjunction with the level three screening process, the project team will be conducting an initial design for each alternative that has advanced to the level three screening process. This initial design will be used to support and provide information for the level three screening process. The project team anticipates the initial design process to be completed by the end of March. I'll now hand it over to Rebecca to talk about public and agency engagement.

Rebecca Hernandez:

Thank you Chris. This is Rebecca Hernandez with the North central Texas council of governments. Throughout the Dallas to Fort Worth high-speed transportation connections study, there are many opportunities for the public and other government agencies to review, comment and participate. There are various types of public and agency engagement strategies used in the study. These strategies include; meetings with elected officials in the region and so far two elected officials meetings have been held. On a monthly basis, the project team meets with the federal transit administration and the federal railroad administration to discuss the study progress. Other engagement initiative views so far include technical work group meetings, a technology forum, public meetings similar to this public meeting and a government resource agency meeting. Regarding the technology forum, the project team convened a group of international experts on high-speed transportation modes and technologies to brief them on our project and get a better understanding of the available and emerging technologies.

Rebecca Hernandez:

During the first series of public meetings in September, 2020, 129 participants were present during the meetings. Throughout the month long comment period, 25 comments were received. These comments generally referred to the type of transportation, technology and the alignments the project team is analyzing. A meeting summary and responses to these comments can be viewed on our website as noted here at the bottom of the slide. The project team also offers additional opportunities to learn more about the study. The team is available to provide study information at special events or to groups seeking additional information. Please contact me Rebecca Hernandez using my contact information provided here. In addition to contacting the project team for additional project information, we are accepting public comments on the information in this presentation.

Rebecca Hernandez:

There are two primary methods to provide comments during this comment period. The comment period is open through February 22nd. Comments received prior to February 22nd will be considered and a response will be provided. Comments received after February 22nd may be considered but will not be considered part of the official project record. Comments may be provided electronically on our project at nctcog.org/dfw-hstcs. Comments may also be submitted by mail at the address provided here. Additional public meetings will be scheduled in the spring of this year and for more information or to sign up for project notices, please visit our project website. Contact information for the North central Texas council of government staff are shown here and I'll pause for you to jot down this information if necessary.

Rebecca Hernandez:

(silence)

Kevin Feldt:

This is Kevin Feldt from the North Central Texas Council of governments and I want to thank you for your time and interest today. Please provide your comments and opinions through the options provided. And remember that the February 22nd deadline is for us to officially include your comments in the study and those received after February 22nd may be considered for the study. Your input is welcome and very valuable to the project success so please comment and provide us with input as you deem necessary. Thank you.

Rebecca Hernandez:

We will now be opening up the phone line for public comment or questions. For those on the phone, please press zero to speak. We will request your city and zip code then you will be placed in queue. You will still be able to hear the meeting while waiting in queue. For those who are listening online, we have opened up our online platform. It was open throughout the meeting, but you do have access to type in public comments or questions. And just as a reminder, if you'd to gain access online now, visit nctcog.org/dfw-hstcs and follow the link to today's meeting. As a reminder to participate on the phone, dial (855) 756-7520 extension 70384# and press zero if you wish to speak.

Speaker 6:

We have a question from Kate from Fort Worth. What was the travel time used in the level one screening?

Kevin Feldt:

In the level one screening, we used a 20 minute travel time threshold and we compared each alignment and mode combination to that threshold. So anything that was 20 minutes or faster past, anything that was longer than that did not.

Speaker 6:

We have a question from Michael also from Fort Worth, Texas. Why didn't you include the estimated design right away, utility, relocation, construction, inspection, and program management costs as part of the alignment screening process?

Kevin Feldt:

So those will be considered as part of our level three screening. Levels one and two we're looking at much broader corridors. As we get to level three, we'll be doing some level of design so that we can more accurately assess those numbers.

Speaker 6:

A question from Zane and Plano, Texas. How has China been able to fund and construct an intricate high speed rail in a decade or so while the US lags in such domain?

Kevin Feldt:

Thank you for that very interesting comment. And the real reason is that there are more government regulations and processes that we must go through on our end to identify the appropriate alignments and corridors and technologies. On the China side, they tend to do it more expeditiously because they already have their process figured out early on and can do it much more quickly.

Speaker 6:

A question from Andrew from Fort Worth. Will a recording of this meeting be made available online?

Rebecca Hernandez:

Thank you Andrew. This is Rebecca and yes, we do have a prerecorded version of this meeting online with all the same information that is currently posted in English and will be up in Spanish also this week. We also have both versions of English and Spanish slides available on the website now. So as a reminder, the project website is nctcog.org/dfw-hstcs.

Speaker 6:

A question from the podium from Robert in the colony. The transcontinental railroad was built in six years, almost entirely by hand. Workers drove spikes into mountains, filled the holes with black powder and blasted through the rock inch by inch. How long do you anticipate it will take to complete the high speed rail project we are discussing today?

Chris Masters:

Thanks for that question. There's a lot of factors that go into the timeframe for completing the project. Once we finish this project two and a half more years from now, environmentally clearing it, decisions have to be made as to how it will be delivered. There's not a delivering entity identified yet nor delivery method. So once decisions are made on who will deliver the project, who will govern the delivery of the project and how it will be delivered, that will set the stage for the time that it takes to deliver the project. Now, if we assume, perhaps it's a design build delivery where they begin to design and then construct while designing at the same time a project of this magnitude about 30 miles or so could take five to six years during the design and construction process, which includes some time for testing. But it really depends on the technology and the nuances of the design right of way access that really lead to the duration for this project.

Rebecca Hernandez:

Thank you, Chris. We currently do not have any additional comments online or any comments or questions on the phone line. So just as a reminder, our phone lines are open for public comment or questions as well as the online option to comment or ask a question. If you are participating on the phone, you can press zero to speak and then you'll be placed in queue. You'll still be able to hear the meeting while waiting in queue. And for those who are listening online, the online platform is open. You have access to type in comments or questions there. And again, the project website where you can gain access is nctcog.org/dfw-hstcs. And then you follow the link to today's meeting.

Rebecca Hernandez:

And as a reminder, you can find additional project information and handouts online. We have handouts in both English and Spanish, and those handouts include a frequently asked questions document, a project, purpose, and need. We have corridor maps, a technology fact sheet as well as all of the current and past presentations and all of that is available on that project website. And let's see if we have some additional comments or questions.

Speaker 6:

We do Rebecca. William from Addison posed, were existing rail modes considered in the screening process, specifically commuter rail and potential high speed rail since access to maintenance and support could be a big factor in profitably implementing new modes of transportation between Dallas and Fort Worth?

Chris Masters:

Yes, when we began this process, one of the modes that we're considering is conventional rail. That's what you might see today as commuter rail, most often diesel engines or diesel mobile units similar to what you might see on Tex rail or DCTA, or what's being built now by dark on the silver line. So those were considered. They were screened out through the screening process so far due to several criteria

that we shared in the screening process with you. Maintenance facility, locations and costs are some of the factors that will be considered in level three as well. But yes, those are more conventional modes of rail transportation were considered.

Speaker 6:

We have a question from Julie from Fort Worth. Of the three options high-speed Maglev and Hyperloop, which one looks to be the most cost effective?

Chris Masters:

So as part of our level three screening, we'll be looking into this issue. We're looking at specific costs. We're also looking at potential travel demand. So we'll be getting into this more as we get into the level three screening. So at this point it's still under evaluation but we will be getting into that more and we'll be able to provide more information in level three.

Speaker 6:

A question from Zane in Plano. Has the team studied China's high speed rail system?

Kevin Feldt:

Thank you Zane. We investigated quite a bit the Chinese high-speed rail system several years ago and this was when the Texas Department of Transportation was at the time looking at the same area with a similar type project. Unfortunately the textile project ran out of funding and we picked it up and are continuing to move forward. But yes, we did look at the Chinese and we've actually tried to reach out to them during this particular project and ask them to participate with us. One of the things that Rebecca mentioned in our public engagement opportunities has been, we held a technology forum back in December and after that technology forum which was more of a group setting if you will or workshop, we then engaged in various discussions with the technology firms themselves to get more detailed information. And this is where we reached out to the Chinese and they have at this point decided that they do not want to participate in our effort at this time.

Speaker 6:

A question from David in Dallas. Does this project have funding yet?

Chris Masters:

At this time it has funding to move us through this particular National Environmental Policy Act effort. However the next phase, as we mentioned, the phase two piece of this which is more detailed analysis of all of the remaining alignments in core and modes, one of the requirements in that process is to identify a funding plan and a governance plan and at this time that have not been identified, but that was one of the things that will be done in the second phase beginning of this summer.

Speaker 6:

From Kevin in Arlington. As an Arlington resident, I am very familiar with the railroads right along the 180 corridor. If the project were to continue along that corridor, how would the existing infrastructure in the area be affected by the high-speed transportation project? Would it replace or perhaps repurpose existing rail?

Chris Masters:

And that is a detail we're looking at right now as we advance the design for the corridors that we showed you earlier on the maps. And as you mentioned, one of those corridors, a few of those options actually run along what everyone is familiar with as the Union Pacific corridor [inaudible 00:40:42] had two coordination meetings with Union Pacific, one earlier this week in fact, talking with him about access principles and adjacency and such. As we advance the designs and we're doing it in step with Union Pacific to determine at this early level, where are some likely locations the corridor could be located? This is a preliminary advancement of design, just enough for us to screen, according to the criteria that we showed during the level three screening. Once we select the preferred alternatives to be advanced, whatever that alternative is, we'll work with all the jurisdictions associated with that alternative to advance it in a way that works for those jurisdictions.

Kevin Feldt:

I would also just add that for all of these alignments, whether they're the ones remaining on the IH 30 or along the SH 180 adjacent to the UP, we are setting up coordination meetings with all parties. So we've, as Chris mentioned, had meetings with Union Pacific, we also have upcoming meetings specifically with TxDOT and FHWA. So we're engaging all parties as we analyze these alignments further.

Ian Bryant:

And to answer Kevin's question a little further, we also are meeting individually with the local governments along the corridor, and have already had a meeting with the City of Arlington who is very supportive of what we've been doing and where we are at this point in the process.

Ian Bryant:

(silence)

Rebecca Hernandez:

And we don't have any additional comments or questions at this time, but if you are just joining us, the phone line is open for comments or questions so if you are on the phone, please press zero to speak then you'll be placed in queue. You will still be able to hear everything while you're in queue. And our online platform is also open so you can type in your comments and questions there, and to gain access online, go to the project website, nctcog.org/dfw-hstcs and then just click on the link for today's meeting, January 27th. And the comment period is open through February 22nd. If you do have any general questions throughout the next few weeks, you can always email us our project email address is hst_dfw@nctcog.org. You can just also go to the website and click on submit a comment or email ask us a question. You click on those buttons and it will email us. So let us know if you have any comments or questions now or if you have any before February 22nd, we're happy to take those. It looks like we do have another comment or question.

Speaker 6:

We do. Chad from Fort Worth asks, the alignment along I-30 in Tarrant County seems to be the least impactful to residential areas when compared to the 180 corridor, the I-30 alignment would be preferred.

Kevin Feldt:

Chad, thank you very much for that comment. That is one of the things we will be investigating as we move into the level three screening regarding the impacts to residential and commercial and community resources. We anticipate that analysis to conclude probably at the end of March, first part of April and we'll have a better answer for you at that time regarding the amount of impact and the amount of need for whichever quarter we select. The other thing to keep in mind is that with I-30, one of the possibilities in that quarter that we will be investigating is, as you may know, the corridor from Arlington toward Dallas has been recently reconstructed and redone. From Arlington toward Fort Worth, that process has not begun with TxDOT. So one of the things we'll be looking at as we move forward through the process is, how can we marry those two processes together if in fact I-30 is the one quarter that emerges from this analysis.

Speaker 6:

We have a few more comments from our online system. Mark from Fort Worth wants to know, has the mayor voiced any concerns about this project?

Kevin Feldt:

I'm sorry, could you repeat the question please?

Speaker 6:

Has the mayor voiced any concerns about this project? The mayor of Fort Worth.

Kevin Feldt:

At this time Mayor Price has not indicated any concerns to us. In fact, we've had a briefing with our city staff and also we've had a briefing with the city council committee. So at this time we do not have any concerns voiced from her. We also would mention that in the past when we've been actually meeting with the mayor in a one-on-one basis, she has indicated support for the project in the past.

Speaker 6:

I have another general comment from Paul also in Fort Worth. Paul has two concerns about the 180 alignments. First is the impact it would have on the handley historic district, which straddles 180 East of 820, second is the impact that it would have on the BRT route that Trinity Metro is [inaudible 00:46:48] for 180 from downtown Fort Worth to 820.

Kevin Feldt:

So those are very valid concerns. As part of our level three screening, we will absolutely be looking at cultural resources, including historic resources and neighborhoods. So we'll be analyzing those potential impacts. As a reminder, this project, whether it ends up high-speed rail, Hyperloop or Maglev would be elevated. So it would be on an elevated guideway. So we'll be looking at potential impacts, not just direct impacts but also impacts in terms of visual, noise and vibration. And then in terms of impacts to existing transportation corridors, we'll be analyzing that as well. So those are all part of our level three screening and we'll be taking a deep dive no matter what alignment's chosen.

Chris Masters:

And to add to that too, once we get into the preliminary design, once the alternative is selected, we'll get into more detail that will let us coordinate with local transit agencies about services they're already

provided as detailed advance. It's to be several years until anything would be implemented on this project, plenty of time to coordinate, to make sure that service is provided as needed.

Speaker 6:

Another from Mark in Fort Worth. I didn't catch if it was tax dollars or private money funding this project. Can you clarify?

Kevin Feldt:

Thank you Mark. At this point we do not know. As I mentioned, we're in our second phase of the process which will begin in the summer of this year. We will analyze that. One of the things that will occur is, when we reach the federal decision at the end of this process in middle of 2023, we will have identified a funding strategy and a governance implementation strategy. One of the keys to all this is once we obtain federal environmental approval, the project would be ready for a private group to come in and possibly oversee and move forward with the process. There's a lot of options available to us, a pure public option, private sector option or some combination of the two. So at this point we do not have a definitive strategy identified but that will be one of the things that we will identify in the second phase beginning in the summer.

Speaker 6:

Few more questions, David from Dallas asks, given the existence of the TRE line, could this project be considered a redundancy?

Kevin Feldt:

Thank you David. It could be from, it actually accesses the same stations on both ends. However, this is a very different type of service that would be much more quick and have much fewer stations and there are stops along the way. The other key difference in this is that it would eventually tie into a system that would go from Fort worth and southward and is also intended to access, if not be an extension of the service that goes from Dallas to Fort Worth, or from Dallas to Houston, I'm sorry.

Speaker 6:

K from Dallas asks, since one of the objectives is connectivity with other systems like bus and rail, at what point will you begin to have estimates of demand and potential transfer activity that would inform capacity needs of other systems?

Kevin Feldt:

Okay, thank you for that question. At this point we are just reviewing, and for this particular alternative analysis, first phase of the project, we are creating what we would consider more of a demand for the service rather than actual ridership or actually transfers or those types of other activities. A lot of that work will be done in the second phase as we get into the National Environmental Policy Act portion of the project that will begin again in the summer of this year. During that process, we will anticipate developing all of the more specific ridership estimates for this particular corridor as well as what different transfers would occur and exactly what the amount of folks that would be coming to or leaving from one of the stations on other modes.

Speaker 6:

A couple more questions. Ryan from North Richland Hills asks, are there other similar projects in the United States that are being used as case studies to determine how ownership and funding could work, understanding that these haven't been determined yet for this project?

Chris Masters:

We're working regularly with the FTA and the FRA as our federal stakeholders on this project. And as we began this project, we engaged them to share with us any projects that were similar, either they've done in the past, upcoming or that were existing today. And so through that process, we have coordinated with them. They've shared some examples. One relevant one that's happening today is a Maglev study between DC and Baltimore and we're constantly getting some information from the FRA and their team members on how that project is progressing as well. So we are reaching out through our federal partners to see what other projects are constantly being considered not be similar to this in one way or another.

Kevin Feldt:

And I would also add that in the United States, other than that magnetic levitation process or project going on between Baltimore and Washington, DC, all of the other high-speed transportation initiatives have been much longer in distance and not the short 31 mile project that we are investigating.

Speaker 6:

We have another from Ryan and North Richland Hills. Understanding that profitability isn't necessarily a primary, although important driver in public projects, what is the likelihood of utilizing a grade separated technology and associated infrastructure costs on the proposed alignment?

Kevin Feldt:

First of all Ryan, thank you for the question. And that is a lot of the work that we're doing in our level three screening. A lot of the costs estimates that have been referenced or asked about in this particular meeting today will not be able to be determined until we do a little bit of engineering work within the next few months. And the major cost identification will call in our second phase when we get more into specifics and do a lot more detailed design work and engineering work on this particular corridor. But that is a good question and will be one of the things that we continue to evaluate throughout the process.

Ian Bryant:

I would also add that as we go through this process and we've talked with a number of technology firms, the idea of additional revenue streams has come up on multiple occasions. And so looking at, in addition to obviously transporting people at high speeds from Dallas to Fort Worth, also the ability to potentially integrate cargo has been considered as something as we talk with some of these private firms is very much a part of their strategy. So there is an opportunity depending on the technology selected to integrate a cargo component to potentially, again, depending on the infrastructure integrate solar panels and solar systems to help offset some of the energy consumption. As we talk with the various firms and also work through this process ourselves, we're looking to identify any additional revenue sources from this as well.

Chris Masters:

And in addition to talking to technology providers, we're also talking with technology operators. Those are already operating high-speed systems throughout the world, and through our conversations with them we're talking about what makes a system this attractive, what makes it one that could be operated as you mentioned in a profitable way, and have some feedback from them at this preliminary timeframe as well. So not only are we looking at technologies but we're looking at operations perspectives as well.

Rebecca Hernandez:

Okay. And now we are approaching, it's about 12:54 now, and we're scheduled to go to 1:00 PM. So I do want to just remind everyone one last time, if you are just now joining us on the phone, you can press zero to speak and you will still be able to hear the meeting when you're in queue but you will be able to ask a question or state your comment. Again, just press zero in order to go into the queue. And again, if you're listening on online then the online comment platform is open. So you do have access to type in your comments or questions there again, it's nctcog.org/dfw-hstcs. And then you just follow the link to today's meeting, January 27th. So if you are on the phone, feel free to press zero if you wish to speak, we have about five minutes.

Rebecca Hernandez:

And as a reminder, we do have a lot of information online for you. There are a frequently asked questions that we've put together in an FAQ document that is posted online and I can go over some of those right now. Some of the topics included in the FAQ document, we have just general topics, questions and answers about traffic relief, technologies, environmental impacts, safety and security, ridership, economy funding and then some public involvement questions. But some of these on the FAQ document, we have related to previous studies. So I'll ask some in the group here, there's a previous study, there's a core express service project and then some other studies. Can y'all tell me the difference between these or how is this study different than previous studies?

Kevin Feldt:

Thank you Rebecca. The core express service project that was done by the Texas Department of Transportation in conjunction with the Federal Railroad Administration is very similar to the work that we're doing here. The difference is that we're going to be able to go further in the process because we have additional funding to complete the work that the core express service project began. The other difference is that we are investigating slight adjustments to the alignments that were done in that particular effort, for instance some of the alignment options along I-30 require avoiding the major interchanges that are along the corridor, whereas the core express service project didn't quite deviate from the right away as much as we anticipate it could. The other difference is that the core express service project that was done a few years ago did not investigate some of the emerging technologies that have come to light since then and are being investigated in this particular project.

Rebecca Hernandez:

Thank you, Kevin. It looks we do have one question. This may be our final one.

Speaker 6:

Sure. Dennis from Prosper, Texas writes, how could the cost of developing a new high-speed corridor between Dallas and Fort Worth possibly be justified with the existing TRE rail when it could be upgraded for much less of an additional investment to operate near the 20 minute travel time level one screening criteria?

Kevin Feldt:

Thank you, Dennis. I'll let Ian and Chris answer some of this because of the level one screening that eliminated that particular corridor. However, I would say also that the TRE serves a very different market than what we anticipate is high-speed transportation system to serve. The TRE corridor serves the local commuters that want to go from Fort Worth to Dallas and maybe some stops in between, that's why there's 10 different stations along that particular corridor. This particular project is designed more for a much less local access. We anticipate access to be in the two major downtown areas as well as in Arlington and the speed, which you're correct in that there is a way to do that maybe on the TRE corridor but I'll let again, Ian and Chris discuss the reasons why that may not have been one of the corridors that made it through the process.

Ian Bryant:

Well from my perspective, I would say that I see these much more as complimentary services. As Kevin mentioned, really TRE is more of providing greater access to a much larger number of stations as opposed to the high-speed transportation project that we're talking about today, which really is much more about time. We will absolutely though will be analyzing, as Kevin said, as we get into phase two, potential impacts to TRE service, to TRE ridership as well as ridership throughout. I see it how we have light rail and streetcar and light rail is providing that longer corridor where street cars providing even greater service within those much smaller corridor. So really in my opinion, we have the same situation here with light rail and commuter rail versus high-speed transportation.

Rebecca Hernandez:

Okay. Thank you. And now it is one o'clock. So we will be concluding this meeting. For any other questions or comments, we are accepting those through February 22nd as part of the official record but we will always accept any comments or questions after that, but please head to our website for any additional information and to contact us, nctcog.org/dfw-hstcs. Thank you for your time today.

Rebecca Hernandez:

(silence)

**APPENDIX E. LIVE MEETING TRANSCRIPTS
JANUARY 28, 2021**

Dallas-Fort Worth High-Speed Transportation Connections Study
January 28, 2021 Meeting Transcript

Michael Morris:

(silence).

Okay. Welcome everyone. My name is Michael Morris. I'm Transportation Director here at the Council of Governments were at the mothership in Arlington, Texas. We'll begin shortly. Just hold on one moment.

(silence).

Okay, we're ready to go. Thank you very much, Consultant Team, Council of Governments Team for getting us to this particular point in the study. To the public residents, businesses, other interest, transportation advocates, thank you very much for coming to our public meeting this evening. This is the second round of public meetings. So you're going to see a lot of progress from the first kickoff meetings. This is the second of two public meetings in this round. We held one during the day on the 27th. Here we are this evening to engage as many folks as we possibly can on such an important subject.

So you will hear lots of progress. The project is on schedule, lots of things happening on technology, talking to the best and the brightest from across the world with regard to technologies in our corridor, lots of work on applying the opportunities in specific transportation corridors. You'll see that progress tonight as well. So we will start the presentation this evening, turning it over to Kevin Celt who, like me, is a Council of Government's employee, and who's our project lead on this study. I want to recognize Sandy Wesch, who works closely with Kevin on a lot of the technical details and our terrific consultants. There'll be introduced here in a moment. Kevin, I turn it over to you, sir.

Kevin Celt:

Thank you, Michael. Good evening, everyone. During this presentation, we will cover many topics related to the study. These topics include a project overview, the alternative screening process and initial results from level one and level two screening efforts, information pertaining to the next level evaluation effort, and the project conceptual design steps, information on public and agency engagement efforts, as well as ways to provide comments about the project. There are three primary purposes for the meeting today. The project team will provide the results from the first two levels of screening analysis for both technologies and alignment, identify project team recommendations to be used in a level three screening process, and receive public comments and input regarding the project team recommendations.

The next section, we'll discuss the project overview focused on the project study and area schedule. The primary project objective is to evaluate high speed transportation technology options between downtown Dallas and downtown Fort Worth. This includes analyzing both alignment and transportation mode options between the two cities. The objective includes finding ways to connect the Dallas-Fort Worth region to other proposed high performance passenger systems in Texas. Also, the project will investigate ways to enhance connections to the regional transportation systems, including automobile, bus, rail, bicycle and pedestrian networks. An additional objective is to obtain federal environmental approval to design and implement the project.

The stated objectives will be analyzed in the study area as shown on this map. This area is generally bounded by State Highway 121 and State Highway 183 to the north, Interstate Highway 35-E

to the east, downtown Fort Worth to the west, and United States Highway 287 and State Highway 303 to the south.

One of the initial tests for this type of study is to develop a description of the project purpose, which addresses the project objectives. The preliminary project purpose is to connect downtown Dallas and downtown Fort Worth with high speed intercity passenger rail service or an advanced high speed ground transportation technology to provide an alternative to travel by automobile, to advance state high performance rail transportation network and to support economic development opportunities in the Dallas-Fort Worth region, and to enhance connectivity.

For more information regarding the preliminary project purpose, please go to our project website at NCTCOG.org/DFW-HSTCS. From there, select the Project Information Tab then the Purpose and Need Document Link. The Dallas-Fort Worth high speed transportation connection study is divided into two phases. The first phase will analyze all reasonable alternatives regarding alignment and travel technology. The wide range of alternatives will be pared down to a small number of recommended travel technologies and a small number of alignment options to a multiple level screening process.

Staff anticipates first phase of this project to take approximately 12 months and conclude in spring of this year. During the first phase, there will be three opportunities for the region to participate in the study to public meetings events. We previously had meetings in September of last year. We are now having the public meetings, and our next is tentatively scheduled for April of this year.

The second phase will be an engineering and environmental analysis as prescribed by the National Environmental Policy Act. The second phase will include conceptual and preliminary engineering tests. The phase two schedule indicates beginning of the work efforts in early summer of this year and concluding in late spring or early summer of 2023. This 24-month schedule includes two primary public engagement events in early fall 2021 and late summer of 2022. As always, questions and comments are welcome throughout the entire project study. Now I'll turn it over to Ian Bryant with HNTB.

Ian Bryant:

Thank you, Kevin. Good evening, everyone. My name is Ian Bryant, and I'm the consultant Project Manager for our study. In this section, I'm going to focus on the overall screening process as well as talk to you about the level one and two screening results and recommendations. The project team is using a three level screening process to pare down the initial large number of possible options to a select few by the end of the first study phase. The process is depicted on this graphic. The process begins with identifying all reasonable alternatives. The first level of evaluation for the alternatives is to determine if the alternative meets the project purpose and the project need. The alternatives that meet the purpose and need then move to the second level of evaluation.

The second level of evaluation focuses on identifying any flaws which may preclude the alternative from being built. This is where the project team is currently. This is also where we need your help. As we discuss the preliminary level two screening results, please take the time to review the results and provide your thoughts and comments. The information gathered will be very helpful as we make recommendations for alternatives to advance to the third level of screening analysis. The goal is to complete the third level of evaluation with a limited number of technologies and alignments to be evaluated in the project's second phase. Using previous transportation studies that examined corridors between Dallas and Fort Worth, the project team identified many possible alignments and corridors to analyze.

In general, the project team identified alignments and corridors along existing transportation routes as much as possible in order to minimize the need to acquire additional property. Also, using existing transportation corridors would minimize impacts to homes and businesses. Each alignment and corridor option will connect the central station and downtown Fort Worth to the proposed high speed rail station in downtown Dallas. In all, 43 distinct alignments and corridors were identified for study.

The initial 43 distinct alignments were grouped into five families of options. These five families are generally identified as the Trinity Railway Express or the TRE alignments in purple, the Trinity River alignments in gold, the interstate 30 alignments in dark blue, the State Highway 180 alignments, which is also very near the existing Union Pacific Railroad alignment in red, and the State Highway 303 alignments in light blue. These are the alignments and corridors the project team analyzed during the initial level one screening.

There are also several high speed transportation technologies or modes of travel to be examined for their use to meet the region's travel needs. These initial modes of travel include conventional passenger rail trains, higher speed trains, which are faster than conventional trains but slower than high speed trains, high speed rail trains, which are the passenger trains proposed for the Dallas to Houston system, magnetic levitation or maglev for short, Hyperloop technology which incorporates a passenger or cargo pod moving in a near vacuum tube, and other emerging high speed transportation technologies. Looking more closely at the design characteristics for each technology, it's important to understand how the footprint and the profile could affect the surrounding environment, including the amount of right away width needed. Typical sections of each technology give a view of the technology and its associated infrastructure required.

A typical section is what can be expected to be generally built throughout the corridor. Conventional and higher speed rail typical sections are generally constructed on the ground as shown in the pictures on the previous slide. The technologies with the highest speeds require the vehicles to operate on bridge structures throughout a corridor to separate them from other roadways and rail lines. The typical sections for high speed and magnetic levitation trains and the Hyperloop technology are shown here. The three distinct levels of evaluation are shown in this graphic. The first level focused on the project objectives and purpose, while the second and third levels provide increasingly more detailed evaluation criteria.

The level one evaluation was aimed at determining if the alternative would meet the project purpose and need and was conducted using two screening evaluations. The primary evaluation determined as the alternative would serve both downtown Fort Worth and downtown Dallas with a travel time faster than existing modes. The secondary evaluation and level one determine if the alternative would be safe, reliable and convenient, if it could link to other high speed transportation systems serving Texas, connect to existing regional passenger systems and improve access to major activity centers in the study area.

The results of the first level of screening are shown here. Using the primary criteria, all alignments are both downtown areas. The next part of this primary criteria screens out alignment and mode combinations or alternatives that have a longer travel time between the Dallas and Fort Worth station than the 20-minute threshold. Using this travel time criteria, none of the 43 alignments pass the test for conventional rail. Higher speed technology has eight alignments that passed the travel time test, while high speed rail passes on 39 of the 43 alignments. Maglev and Hyperloop technologies pass on all 43 alignments per travel time. Using the secondary level one screening criteria identified, many alignments should not be considered further in the second level of screening analysis.

In total, 23 of the 43 alignments were identified for consideration in the level two screening process. The next few slides show the tables used to document the evaluation of the 43 alignments. The

green indicates the best score, yellow medium, and red is the lowest. These tables are available on the project website. The table shows the level one screening results associated with the Trinity Railway Express family of alignments and the West Fort Trinity River family. Both the TRE alignments and the West Fort Trinity River alignments scored low in the first category because of the number of challenges to build a closed system in this corridor. A closed system is a grade separated and does not share track with any freight rail operations. We can come back to these tables during question and answer if you'd like, and they are also available on our website to look at offline.

The level one screening results associated with the IH-30 family of alignments are shown in this table. The IH-30 alignments would also have some challenges but to a lesser degree. The main takeaway here is that the vast majority of the IH-30 alignments do perform well when compared to the purpose and need for this project. The level one screening results associated with the SH-180 family of alignments and the State Highway 303 family of alignments are shown in this table. The SH-180 alignments would also have some challenges, but also to a lesser degree similar to the IH-30 alignments. The SH-303 alignments would have lesser challenges to build a closed corridor, but was further away from major activity centers. As you can see here, the vast majority of the SH-180 alignments move forward to the level two screening and the SH-303 alignments were eliminated from further consideration.

As a point of reference, This map shows all five families of initial alignment options, which includes all 43 distinct options between downtown Fort Worth and downtown Dallas. As mentioned earlier, 23 of the 43 alignment options pass the level one screening. These 23 alignment options are shown on this map. These alignments are recommended to be further evaluated in level two and generally are in the IH-30 family and the SH-180 family of options. Turning to the level one screening analysis regarding transportation technologies, as mentioned previously, the conventional rail technology did not pass the level one primary screening analysis and was eliminated from further consideration.

Level one screening analysis results for the higher speed, high speed Maglev and Hyperloop transportation technologies are shown in this table. These four technologies were recommended to be further evaluated in level two. Moving onto the level two evaluation process, level two centered on determining if the alternative has any fatal flaws, meaning a concern that would prevent further development of the project using that alignment. Various conditions are examined for each alternative, including proximity to environmentally sensitive areas, potential community impacts, technology maturity, compatibility with existing infrastructure, and operational characteristics.

The level two screening results identify both alignment options and transportation technology options to move forward into the more detailed level three screening analysis. The results for the IH-30 alignments indicated that seven of the 12 alignment options should be analyzed further. Also, three of the State Highway 180 alignment options are identified as needing additional analysis as well. Regarding transportation technologies or modes, the level two screening suggested that higher speed technology not be analyzed further, while high speed rail Maglev and Hyperloop technologies should be analyzed further. In addition, the new and emerging technologies initially analyzed were not recommended for consideration to level three screening process.

The level two screening information is shown in this table for the IH-30 alignment options. The seven alignment options, with the highest scores, which are shown in green are suggested for further analysis in the level three screening effort. As you can see, the majority of the alignments along IH-30 passed and were moving on into the level three screening. The level two screening information is shown in this table for the SH-180 alignments. The three alignment options with the highest scores, again which

are shown in green along the bottom are suggested for further analysis IN the level three screening effort.

As a point of reference, this map shows the 23 alignments passing level one screening that were analyzed in the level two screening process. This includes the IH-30 and the SH-180 alignments. As mentioned earlier, 10 alignments passed the level two screening analysis and are shown on this map. This includes the seven IH-30 options and the three SH-180 options. We need your thoughts to make sure the project team has selected the correct alignments that we want to analyze with a level three screening process. Please visit our project website to submit your thoughts and comments and also provide your comments during the question and answer period later in this meeting.

The level two screening information as shown in this table for the foUr transportation technologies move forward from the level one screening and to the level two screening process. The three transportation technology options with the highest scores, which are shown in green, are suggested for further analysis and the level three screening effort. As a point of reference, this graphic shows the initial transportation technologies that were identified for this study. These include conventional rail, higher speed, high speed rail, Maglev, Hyperloop, and other emerging transportation technologies. As mentioned earlier, three transportation technologies passed the level two screening analysis. The remaining options include high speed rail, Maglev, and Hyperloop modes. Again, we need your thoughts to make sure that the project team has selected the correct modes to analyze in this level three screening process. Now we'll hand it over to Chris to talk about next evaluation and design steps.

Chris Masters:

My name is Chris Masters. I'm the Deputy Project Manager for the Consultant Team. So at this point, the level one and level two screening efforts have been completed, and the remaining tasks in the level two screening is to incorporate comments received from the public during the public comment period, which ends February 22nd. After incorporating the public comments, the next project efforts include the level three screening process and conceptual design. The level three screening process will focus on a more detailed evaluation of the remaining alignments and transportation technology alternatives including a conceptual design for each.

The third and final evaluation level criteria includes cost estimates, potential impacts to environmentally sensitive areas, other potential community impacts, and the ability to construct the proposed project for the future. As with the alignment options and transportation technology options. We need your thoughts to make sure the project team is selecting the correct criteria to analyze in the level three screening process. Please visit our project website to submit your thoughts and comments.

The level three cost screening criteria are divided into three separate cost components. The description for each component is shown on this graphic. Also potential impacts to an environmentally sensitive area criteria is divided into five separate components. The components for those criteria, categories are shown, are scored and aggregated into one score for each criteria category. I'll pause for you to review the criteria and the descriptions.

The level three community impacts and screening criteria are divided into four separate components. The description of each component is shown on the graphic. Also, constructibility and system operability criteria are divided into five separate components. The components for each of these criteria categories will be scored and aggregated into one score for each criteria category. I'll again pause for you to review the criteria and descriptions.

In conjunction with level three screening process, the Project Team will be conducting an initial design for each alternative that has advanced to the level three screening process. This initial design will

be used to support and provide information for the level three screening. The project team anticipates the initial design process to be completed by the end of March. Now, Rebecca will visit with us about public and agency engagement.

Rebecca Hernandez:

Thank you, Chris. I'm Rebecca Hernandez with the North Central Texas Council of Governments. Throughout the Dallas-Fort Worth High Speed Transportation Connection Study, there are many opportunities for the public and other government agencies to review, comment and participate. There are various types of public and agency engagement strategies used in the study. These strategies include meetings with elected officials in the region. So far, we've held two elected officials meeting. On a monthly basis, the project team meets with the Federal Transit Administration and the Federal Railroad Administration to discuss the study progress.

Other engagement initiative used so far include technical work group meetings, a technology forum, public meetings similar to this public meeting, and a government resource agency meeting. Regarding the technology forum, the project team convened a group of international experts on high speed transportation modes and technologies to brief them on our project and get a better understanding of the available and emerging technologies. During the first series of public meetings in September of last year, 129 participants were present. Throughout the month long comment period, 25 comments were received. The comments generally referred to this type of transportation technology and the alignments the project team is analyzing. A meeting summary and responses to these comments can be viewed on our website as noted here on the bottom of this slide.

The project team also offers additional opportunities. To learn more about the study. We're available to provide study information at special events or to groups seeking additional information. Please contact me, Rebecca Hernandez, using my contact information provided here. In addition to contacting the project team for additional project information, we are accepting public comments on the information in this presentation.

There are two primary methods to provide comments during this comment period. The comment period is open through February 22nd. Comments received prior to February 22nd will be considered, and a response will be provided. Comments received after February 22nd may be considered but will not be considered part of the official project record. Comments may be provided electronically on our project website at NCTCOG.org/DFW-HSTCS.

Comments may also be submitted by mail at the address provided here. Additional public meetings will be scheduled this spring. For more information or to sign up for project notices, please visit our project website. Contact information for the North Central Texas Council of Governments staff are shown here. I'll pause for you to jot down these if necessary. I'll hand it over to Kevin Celt to wrap it up.

Kevin Celt:

Thank you, Rebecca. Thank you, Ian and Chris, for your comments this evening. The Project Team would like to thank you for your time and interest. Please provide your comments and opinions to the options provided. Your input is welcomed and very valuable to the project's success. Thank you. Now, will begin to answer the questions and comments that we've received throughout the meeting. Is there anyone that we had from the telephone side?

Rebecca Hernandez:

Thank you, Kevin, that we will now be opening up the phone line for public comments or questions, as Kevin mentioned. For those on the phone, please press zero to speak. We will request your city and zip code then you will be placed in queue. You will still be able to hear the meeting while waiting in queue. For those who are listening online. We have opened up our online platform you have access to type in public comments or questions. To gain access online visit NCTCOG.org/DFW-HSTCS and follow the link to today's meeting. As a reminder to participate on the phone, dial 855-756-7520, extension 70385# and press zero if you wish to speak. Our first question tonight comes from Anna in Lantana, Texas. Will there be a station in Arlington?

Kevin Celt:

Thank you for the question, Anna. At this point in time we are preparing to analyze the station location in Arlington as a midpoint station between Dallas and Fort Worth. As we move through the process, that station will be analyzed further. We will have a recommendation towards the end of this particular first phase of alternatives analysis.

Rebecca Hernandez:

A comment from Maribel, also in Lantana, Texas. We are for the SH-180 alignments.

Kevin Celt:

Thank you, Maribel. At this point, we are again evaluating all possible alignments. While we've been reduced that amount down to the 180 and Interstate 30 alignments. We'll continue to evaluate those in our level three screening. As we get to the end of this particular alternatives analysis phase, we will then now have our recommendation. That may or may not be what we come up with.

Rebecca Hernandez:

A question from Ruth in Dallas, Texas. How are these criteria being objectively scored? For example, specifically, how is environmental justice being measured? Who is contributing to that assessment? Please be careful to include general public more than business leaders or potential or actual vendors who do not reside in the impacted communities.

Kevin Celt:

Well, thank you for that question, Ruth. In terms of environmental justice, for our analysis we've completed to date, we are using the environmental justice index, which was developed actually by the North Central Texas Council of Governments. What that does is it looks for low income and minority populations and compares that percentage within each block group, census block group to the average within the region. So it shows us the areas that have a higher percentage of environmental justice populations. Then we take that into account as we've done our high level screening to date to determine potential impacts to those communities. We'll also be, as we get into Level three, doing a more refined analysis as well, as we start to hone in on the actual right of way footprint for the remaining alignments.

Michael Morris:

This is Michael Morris. One thing that we could add is that set of technical factors affects all transportation decisions in the Dallas Fort Worth region. So it isn't just high speed rail. But as we advance the Southern Gateway Project or the horseshoe are all of those transportation projects, all use

those set of performance metrics. I very much applaud the the question because environmental justice is more driven on the residential side than it is on the corporate side.

So if any of our listeners tonight have specific associations or homeowners groups, or coalitions, or related to environmental justice or related to other advocacy positions, please get with Rebecca so we can engage those communities and share the analytics and viewpoints to date, and the sensitivities that we take. I'm very proud of a long record with regard to improving accessibility and minimizing impacts to protected populations. So just don't trust us with what we say, review those metrics and engage us and give us a chance to make those presentations to specific groups.

Because in the end, it's going to take support from a lot of folks in order to advance such an important project in the region. So I'm just adding additional detail to Ian's comment and the encouraging participation, have it be on Title VI Environmental Justice or or or other elements related to cost or, other things that may be of interest to you.

Rebecca Hernandez:

We have a question from the telephone. It is Phyllis Silver from Addison. So I will open up her line to allow her to speak.

Phyllis Silver:

Hi. I would like a brief explanation of what magnetic levitation is and whether it has any effect on the passengers.

Chris Masters:

Thank you for that question. In short magnetic levitation uses a high powered magnets to cause a vehicle to float. The vehicle can either be propelled from the bottom to be pushed upward, or it can be pulled toward rails on the top of the track way as well, a couple of different ways to support the vehicle, then it's moved along with electromagnets as well. So there's no moving parts in the system. Some of the benefits of that are reduced maintenance costs, because there's fewer moving parts as such. The magnetic fields do not affect people. The way they're configured, magnetic levitation has been in operation for many years, a couple of major systems throughout the world and in smaller places throughout the US as well.

Phyllis Silver:

Thank you.

Chris Masters:

Okay. I'm sorry. The question that was asked was to describe the magnetic levitation and does the magnetic fields have an affect upon the people that are riding it? Pretty much, I think that was the question.

Rebecca Hernandez:

We have a few questions from Tony from Grand Prairie, Texas. I'll go through them individually. The first question is, will there be a station in Arlington?

Michael Morris:

Yeah, I want to reiterate what Kevin said earlier, the plan is to have three stations, an end station in downtown Dallas, hopefully, in close coterminous to high speed already planned from downtown Dallas to Houston, either in the same terminal or through a cross platform transfer. Obviously, we're going to Fort Worth. Our hope is already have spent some money and trying to go from Fort Worth south to Austin, San Antonio and Laredo. Yes, the Arlington station is important to Arlington. But the Arlington station is also our access egress to DFW International Airport. If anyone wishes to take high speed rail to our region, they could obviously get off in downtown and take light rail or our hope is have an Arlington station and for obviously, residence, entertainment district, but also access to DFW International Airport.

Rebecca Hernandez:

Michael, you ended up answering multiple of Tony's questions. I'm very, very thankful for that response. Another one of Tony's questions was, what will be political challenges to the project? What will be the political challenges from the city of Arlington, specifically?

Michael Morris:

Well, I wouldn't necessarily call them political challenges. Arlington has a rich history and in supporting transportation. They have a rich history in advancing technologies. They're very much engaged in this particular effort. We're going to have to continue to work with with with everyone, as I answered the environmental justice question. You have to work with a grassroots level to gain consensus with regard to say alignment or elevation.

In the case of the Arlington question, which is a good question, Arlington in the in the past has not necessarily supported joining a transportation authority. I think this is a new day with new technologies. I think you see the advancement of the technology via system. Arlington is a very good example. We hope to be able to talk about other technologies that we're currently working on that impact Tarrant County in the Arlington area. We have on the street right now a next generation people mover system. So one really cool thing is you may be getting off of a high speed rail train in Arlington.

You want to go to DFW Airport, you'd be on an autonomous, lightweight structure, people mover system to the airport, so I wouldn't really call them political. I think when you advance such a significant idea in a region, and in a state, and in a nation.,I think it's part of the analytics that we that with each of these particular projects. We would owe story to the city of Arlington the benefits and implications and all the items necessary to convince citizens of Arlington that this is in their best interest.

Rebecca Hernandez:

The last question from Tony in Grand Prairie, has the project team had meetings specifically with community leaders to ensure that the project will directly address inequity in the DFW Metroplex?

Kevin Celt:

Thank you, Tony. Yes, we've had meetings with elected officials in the region, we've had two briefings with them so far. We've also actually met with the city leadership, the mayor and city manager and staff from the City of Arlington regarding the Arlington station, and its connection potentially to the Dallas Fort Worth International Airport. So we also anticipate additional meetings as we go through the process with other leaders within the region.

At this time, we've also met with some of the senior staff at the City of Fort Worth. We continue to meet with folks from ... We have meetings scheduled with the DART and Turnro Express representatives. So we continue to meet with all of the major government entities and transportation groups. We also have meetings scheduled with the Texas Department of Transportation, both Fort Worth and Dallas districts. As Rebecca mentioned earlier, we're very, very excited to have any meetings that would involve any local civic groups or any group of any kind that you may be involved with or others who are listening may be involved with. We'd be more than happy to provide this information on a more individual basis, if you will, with groups. So please contact Rebecca and our staff so that we can begin to schedule those engagements.

Michael Morris:

If I could, before we get the next question. This is Michael Morris again. I think the source of the question on equity is a good question because there's several levels. So we have equity east and west in the region that we're focused on. We have equity across modes of transportation. We have equity to different user groups. We have equity with regard to our office trying to make sure we get our fair share of the National Transportation Revenue.

I think we have equity with regard to bringing the next generation technology elements to our citizens. So I think the the the notions of equity and fairness, I think are all over what it is where equity in a technology forum to make sure we fairly look at all of the best and latest technology mode and don't a priori eliminate someone who who can meet our technology index. So I think the study design that we're following is carving the equity issue in lots of different dimensions.

I think the neighborhood equity and environmental justice is probably the most significant one for us to pay attention to. But it's a sophisticated study design, addressing fairness and equity, across almost everything we touch. We were very pleased that the technology companies at the end of our forum. We're very pleased with the level of fairness and an equity in engaging them with regard to their interest in our quarter as well.

Rebecca Hernandez:

This is Rebecca, I just wanted to add that we did hold stakeholder interviews with some of the council members in the study area back in August, the August timeframe. We collected some additional neighborhood groups, and let's see, neighborhood groups, churches and just other organizations that we previously did not have contact information for. So we have included a lot of additional groups to our contact list after holding those interviews. The next question is from Camille in Dallas, which of the three options has the most open undeveloped land?

Ian Bryant:

Well, thank you for that question. Camille, we did look at adjacent land uses for each of these alignments outside of the potential right of way, including undeveloped land as well as developed. But keep in mind that as we stated at the beginning of the presentation, we're actually looking to utilize existing transportation corridors as much as possible. So with the remaining corridors that you've seen, the maps we presented specifically, IH-30, we're looking to as much as possible stay within that right of way, if that is ultimately selected. With SH-180, we would also try to stay with an existing transportation right of way as much as possible. So we could provide some additional information in terms of percentages of undeveloped, I don't have it off the top of my head. But just keep in mind that, really, we were looking at adjacent to the potential right of way as we're looking to utilize transportation right of way as much as possible.

Michael Morris:

Then, Ian, you would have criteria, like minimizing displacements and other things. So the source of the question could be, let's avoid stuff, meaning go towards open land. But it also could be, "Don't consume public or private sector land, and try to be as tight as you possibly can." Under both of those viewpoints, you have specific criteria that are addressing that. You're minimizing displacements, you're trying to stay on public sector lands, you're trying to minimize right of way, takes to the private sector, you're working all those things that we think would be part of a winning formula when you get to the end of this process. The role of the public would be to engage in such thoughts.

Yes, we like your notion of trying to stay on on public sector land. We like your notion or not to minimize private sector takings. We love your proximity of a high speed rail station to density. We love your notion of minimizing displacement. So our process can only be as good as the criteria that drives it. Which is why both you and Chris have asked the public, "Please engage in those criteria." If we don't quite have them right or you think they should be different, please let us know. So we can take those things under consideration.

It's a lot easier to take those under consideration while the process is being conducted and to try to do it in a in a do over sense. So timely feedback as Rebecca is indicating is very helpful to us. I know it's a lot to review, a lot to think through. But put yourself in our shoes. Are these sub components of these criteria the ones that you best wish us to to uncover to uncover. Thank you.

Kevin Celt:

Those are good points, Michael. I would say that also in level one and level two screening, we were looking at much wider, really wider corridors. Since we do not have actual right of way footprints yet, as we narrow down in level three and start to do some initial design will have a better understanding of potential direct impacts to either undeveloped or develop properties. Also, as an example, at yesterday's public meeting, we received a comment from a gentleman who was concerned about specifically a historic neighborhood in Arlington. So any information that you can provide to us, as Michael says, is much appreciated. And that helps us really make sure that we have a good solid process here with with public and stakeholder input.

Rebecca Hernandez:

Another question from Ruth in Dallas, have you connected with Sierra Club and other environmental groups and received their participation and blessing?

Kevin Celt:

Thank you, Ruth. At this point, we have not sought any participation from any environmental groups other than what we've normally produced from a public perspective. It's always a possibility that they will be a very integral part of this process as we move forward. But at this point, they have not contacted us. We have not sought out any groups in that fashion.

Michael Morris:

So anyone from the public who wishes us to engage with any group, it applies to neighborhoods, homeowners associations, environmental groups, we're more than happy to reach out to American Lung Association or the Environmental Defense Fund or whoever people wish us to do. Right now, we're engaged with the formal US Environmental Protection Agency, and the Corps of Engineers, and Federal Railroad Administration. But outside of those environmental channels, and we'll continue to engage

with those federal institutions, our team, Kevin, Rebecca, the more participants that we engage with, the better. So I think it's a great comment. Any specifics anyone has would be helpful to us.

Rebecca Hernandez:

A question from Andrew in Dallas. How can you entertain the Hyperloop option when in its nascent stage is a disappointment and will likely never be a viable means of transportation? Why waste time and effort on something when technology that already exists works?

Chris Masters:

Thank you for asking that question. As a part of this study, we are initially open to all possible technologies. We're evaluating what all options are because we want to make the best choice for our region, for the state. As a part of our screening process, we evaluate the technology readiness levels of all technologies that are proposed or that have come to our attention during this process. Hyperloop definitely falls in the category of an emerging technology that we have to pay attention to the readiness of the technology, the regulatory compliance, the safety certification, all those elements as well. In our process, specific to Hyperloop, there are several Hyperloop companies that we're actively engaged with, as well as other emerging technologies too. So your point is noted in the fact that we have to make sure whatever technology is selected would be prepared with an appropriate timing for this project as well.

Kevin Celt:

I'd also like to add to that, if I could, Andrew, that, as I mentioned during the earlier part of this meeting tonight, our schedule, getting through National Environmental Policy Act process will take us through the middle of year 2023. Once we complete the process and receive federal authority to move forward, the next steps are to identify our governance agencies and to begin design and eventually construction of the project. All of that will take quite a bit of time. What we're trying to do at this point is, as Chris mentioned, we've used the Technology Readiness levels to identify those technologies that would be ready when we are ready to actually implement the project.

So what we're trying to do is, I guess, in a better a better way to describe it, is we're doing this concurrently, rather than consecutively. In other words, instead of doing our project and then waiting for the technology ... I'm sorry. Rather than in the technologies be certified and ready to go, and then doing our study, we're actually doing them concurrently. If it works out that Hyperloop is one of the recommendations, then then we'll move forward with that. If it doesn't, then we'll move forward to either magnetic level station trains or high speed rail trains.

Rebecca Hernandez:

Our next question comes from Todd in Columbia, South Carolina. What will the top speed of the High Speed Rail Train between downtown Dallas and to downtown Fort Worth be? Will this projects work with the Texas Central Railroad?

Chris Masters:

Thanks for asking that question. The travel time is highly dependent upon the specific geometry of the corridor that we select. We've run travel times on every corridor for every technology at both levels of screening thus far and will again in this next level of screening as we revise the design, refine the design of the remaining alignments. High speed traffic, high speed trains travel an excess of 200 miles per hour. The specific classification of higher speed versus high speed differs from the US to other parts of the

world as well. They're classified in different ways. The ability to reach that speed, though, is dependent upon geometry, stopping at a midpoint station or if perhaps the train goes through a midpoint with an express service. All that will determine what speed it can travel.

For the second part of your question, is will this project work with Texas Central Railroad? We have had multiple meetings with Texas Central Railroad, just one very recently. Everything we're doing is intended to keep options open for a mode of technology, not a specific brand of technology or a specific provider of technology, or making sure our parameters are broad enough to capture them and any other high speed rail providers if high speed rail is selected as a mode.

Michael Morris:

Now, the one thing I think we could add, just for the record, our boundary doesn't go all the way to South Carolina. We're a little short of that. But the policy for last 10 years of our board is what we call a one-seat ride. So it very much speaks to this desire to be compatible with Texas central partners technology to Houston. So the one-seat ride would be you could get on this technology in theory, an open process we have to go through. Assume for a moment it's the same technology as Dallas to Houston. So you could get on in Fort Worth, and take the train over to Dallas, and then other people get on the train to Dallas and go to Houston, and quote, "You're still sitting in your same seat," meaning it's a one seat ride without a transfer.

So behind the spirit of your question is we wish to develop a very user friendly rider-driven service levels, no different than you could get on the train in Dallas and take it to Fort Worth, and then maybe someday, go to Austin or San Antonio or Laredo. But we have to operate with independent utility. So what happens if Dallas to Houston is never built? We still have an interest to go from Fort Worth to Dallas. What if whatever happens, Arlington wakes up one day and wishes not to have a station? Then obviously that speed of that train will go faster, if it doesn't have to stop at a third station in the middle of the region.

So not knowing exactly what Texas Central Partners would do, and where their interest is, we have to conduct our business independently. But we certainly think if it works out, and there's a lot of technical questions, wouldn't it be nice to have a one seat ride? But we're not forcing that conversation. We don't work for Texas Central Partners. We're going to work for 8 million people that live in the region. We think we have a process that can, as Kevin indicates, operate in a parallel world where we can get into the details now into this next engineering phase and find out where we should be and continue to determine which technologies to work. In parallel to that, we'll continue to see where Texas Central Partners are with regard to their particular commitments.

The other thing that's important is even though you may not go quite as fast between Dallas and Fort Worth, because maybe you have a third station, because you want this one seat ride benefit, that that technology is going to go really, really fast on the way to Houston, and it's going to go really really fast on the way to Austin, San Antonio. So you don't want this anti-user friendly, "Well, I'll take a slower train and then get out of it and get in another train."

Where we're creating a system view. So we happen to have a high speed train plan for the State of Texas that happens to go through the middle of our region. We're just carrying the water on the part in this section that is in the middle of that region. But we're carrying the water for what is really an upside down U, which is the vision that the state of Texas has. We're keeping as best we can to this notion of system, user friendly elements.

But at this particular point in time, we have to keep this independent utility notion and look at these in pieces with the hope that you can listen to us, when we get near the end, that we've done

enough due diligence on the on the detail to then put the quote system together as we move forward. So I appreciate the question. I apologize for the duration of the answer, but it is in our mind. It is a complicated question when you have to look fairly at each technology and each alignment.

Kevin Celt:

Yes. Just to add what Michael was saying, Todd, that is one of the options that remains viable in our analysis. That we would continue actually the system that goes from Houston to Dallas and continue it onto Fort Worth. That's one of the options. It's still viable and moving forward in our analysis.

Rebecca Hernandez:

Hi. This is Rebecca. I just wanted to let everyone know it is 7:00, but we will be staying on longer to answer the questions who the people who are still waiting with their questions. Just a reminder, if you are on the phone, you can dial zero to ask your question. You will still be able to hear the meeting while you are waiting in queue. But we will go ahead and answer those questions that have already been entered into the system. Thank you.

Our next question is from Andrew in Dallas. Now that Buttigieg is Transportation Secretary, and he is in favor of highway removals, would you consider the idea of removing Interstate 30 in favor of this high speed corridor?

Michael Morris:

Probably, probably not. Even though we're removing SM Right Freeway at the very moment and replacing it with a boulevard, doing that on the interstate highway is a different question. I do want to add though, that in the western side, the consultants are looking at the reconstruction of Interstate 30 and high speed rail in the same quarter being built at the same time. So no, we are not removing an interstate highway as part of our plan. But we are looking at potentially building a high speed rail and a new Interstate 30, west of Cooper street all the way to downtown Fort Worth.

Rebecca Hernandez:

Our next question is from Howard in Haltom City, Texas. What are the tax implications of those who are outside the range of utilization for the high speed services? Those who would find outside the time between destinations on the line. This is for those where the time to get to the destinations would be greater than the time it would take to access the originating site.

Kevin Celt:

Howard, thank you very much for that question. At this point in time, we have not identified a funding structure for this particular project. That will come in our second phase that begins later this year. In that in that document, we will identify if it's a public only type of a funding scenario or if there are private funding scenarios or if there's a combination of the two. So at this time, we do not have a particular understanding of what those tax implications might be to others. But we will begin to identify those types of structures as we move through the process.

Michael Morris:

The one thing to add would be that if you do build high speed rail, you're going to have a huge impact on developments. Those developments would be around those three stations. They'd would obviously be paying taxes as part of it, as you compare these investments in other parts of the world these. These

high speed rail stations tend to bring lots of interest and excitement on the part of developers. Of course they would be paying their taxes. But please stay with us as we work first on the analytics of what we do, and then we'll move towards the funding and how we implement it.

Rebecca Hernandez:

Our next question, both Tony P from Grand Prairie and Kevin from Fort Worth asked the same question, asking, "Have you spoken with leadership of the University of Texas at Arlington?"

Michael Morris:

Well, we speak to them regularly in lots of different things, I guess this is with regard to their interest in high speed rail. The university historically has been very interested in lots of modes of transportation to get students to and from their institution, both workers and citizens. I know, Kevin, you had a process, early introduction to this where you spent a lot of time looking at stations. You had the university very much involved.

Our north-south connection to the airport could be extended from high speed rail to the south to the university. The university has been very supportive in the via conversations and in transit, originally to the Trinity Railway Express Station. So other than lots of interest on the part of the university, they are the major growth engine of the University of Texas System. There's more land to develop, UTA than there is at UT Austin. So we understand the importance of tier one universities and their access to transit. We have the university as a I would, Kevin, say in a very strong interested partner in the success of transit in Arlington and high speed rail in Arlington.

Kevin Celt:

Yes, that is the that is true. At this point, if the State Highway 180 alignment is chosen, there'll be obviously more conversations with many more folks in the corridor. As Michael mentioned, if the I-30 location alignment is selected, then there will be extensions of other systems that would access the University of Texas at Arlington.

Rebecca Hernandez:

On the same note, Anna from Lantana asks, "Have Arlington neighborhoods and/or business groups had meetings with the North Central Texas Council of Governments on the high speed transportation projects, if so, which ones?"

Michael Morris:

So I'm going back a few years, the Save Arlington put together some stakeholders on the whole notion of transit, those stakeholders developed a report. We held up our study until the stakeholders in Arlington issued the report to the council. That particular report of stakeholders showed strong interest in in our interest to pursue high speed rail. We're interested again, I know this sounds like a broken record, any neighborhood group or interested group who wishes to communicate with us, we would love to talk to them about it.

Especially now that these routes, and we have interest in Arlington to have a station someday, as part of this particular investment. These routes seem to be drifting away from 183, Ian, I'm looking at you, and closer to the middle of Arlington. There's an opportunity to as you continue to sharpen your pencil, to be able to eliminate routes and then other routes become more of interest. Again, you're

trying to minimize impact to neighborhoods by staying on public sector rights of way, like the interstate. But those conversations again, we would love to have with groups.

We didn't want to have a lot of those neighborhood conversations on 60 routes with 48 of them eliminated, that'll be a lot of neighborhood conversations that we didn't need to have. There's a critical time to have those conversations as we move forward. We would again, love to engage with any interested group in those conversations.

Ian Bryant:

I'd just add that's absolutely correct. Now that we are at the phase of starting to put some engineering to this and we have eliminated a good number of potential alignments, we are at the point where we'll be looking to have these more one on one meetings with neighborhood organizations or groups within the specific corridors. So again, please reach out to us with Rebecca, had her information in the presentation. The presentation will be posted online. You can reach out to us, and we'd be happy to meet with you.

Rebecca Hernandez:

Our next question is from Amber from Farmers Branch. What is the anticipated economic impact in terms of jobs and investment linked with this project?

Michael Morris:

I'll give a quick one, I gave several speeches earlier. Every billion dollars in construction produces 15,000 jobs. So we had a presentation to our congressional representative's office earlier, where we have three or four projects right now that reach a billion. If we can help get those advanced, that's 45,000 jobs. Those are the direct jobs, about a third of those jobs, and this is per billion. A third of those jobs are directly in the infrastructure world, a construction worker. But two-thirds of the jobs, and while you're seeing our national government talk about a new stimulus program, is two-thirds of the jobs in infrastructure are what we call indirect jobs. People who make blue jeans, and people who work in a dentist's office, and people who sell hamburgers, and people who paint houses.

You don't want to get caught in the trap that you're doing this project simply to create jobs. You're doing this project because it meets a purpose in need of a region that will soon be 12 million people in a state that is fastest growing, probably the fastest growing state in the country, connecting the fourth and fifth largest region, soon to be the third and fourth largest regions in the country. But the question is right, and especially now. With so many people losing their jobs every week, we understand the responsibility of expediting all of our transportation jobs, for mobility, air quality, safety, environmental justice reasons, because we know they have an economic impact in helping with with people who significantly need those jobs.

I think it's too early because we don't have the dollar amount to translate that into construction, operating. That'll be known at a particular point. But you are correct. Infrastructure generates lots of GDP growth, especially high speed rail. I know we had an earlier comment who didn't like Hyperloop, Hyperloop technology moves people and goods. But we understand our responsibility, especially in the public sector to help create the jobs for all of our community. We don't have specific numbers for you at this time.

Ian Bryant:

The only thing that I would add is from a technical standpoint, as we get into the NEPA process, we will within that NEPA document have an entire section on potential economic impacts, as well as a section on induced growth and cumulative impacts. So all of those are taken into account as we get into the NEPA process and phase two.

Rebecca Hernandez:

Todd from Columbia, South Carolina has a comment and a question. He says, "I have relatives in Houston, Fort Worth, Oklahoma City, and Dallas would be the hub city of my visits. Would you be open to crossing state lines to create service to Oklahoma City?"

Michael Morris:

Well, we already have plans for Oklahoma City, we just don't think it requires a train of this speed. It does qualify for intercity speed at grade. Advancing next generation technologies of at grade Amtrak service from Oklahoma City to our region is part of our future. No different than not just having Amtrak to the east to go to Chicago, but maybe get closer to your hometown in South Carolina. We're trying to advance East-West Amtrak service all the way to Atlanta. So maybe you don't have to fly to Houston to visit all your family. You can take the train right from Atlanta and come into us on an at grade high speed rail system to then travel on a grade separated system. Kevin, you want to anything there?

Kevin Celt:

Yes, Michael. I was just going to add that the Texas Department of Transportation and the Oklahoma Department of Transportation teamed up on a study a few years ago, three or four years ago, to do what's called the Texas Oklahoma Passenger Rail Study. The outcome of that particular effort indicated that the high speed trains would be more appropriate south of Fort Worth, and as Michael mentioned, more at grade or what we would consider higher speed trains that go a little slower than the high speed ones would be the appropriate technology to use from Oklahoma City to Fort Worth.

Rebecca Hernandez:

A question from Ruth in Dallas, "I just heard you say we're moving SM right Boulevard in downtown Dallas. Is this definite? I thought it was still in DOT discussions but not finalized. I do believe it is a good decision but would appreciate confirmation."

Michael Morris:

Yeah, 175 has been extended over 245 once that improvement is in. Now that 175 gets over to 45, we now can tear down the SM right freeway, elevated freeway section, which is south of 45. It is fully funded, all phases. In fact, we won a national technology competition to bring in next generation fiber and other technology into the thoroughfare street replacement of the SM right freeway. So our office, Textile has worked hard with CE Dallas on this for a long time. Our office helped fund it all phases. Phase one was the extension of 175 to 45, that's opened. Now you'll see advancements in the SM right. So yes, we are affirming to you all of that is funded and proceeding.

Rebecca Hernandez:

Ruth has another part of her question. Are there any commitment and goals for minority and women-owned companies to participate as primes or subs for this project? If so, what is that goal?

Kevin Celt:

Very good, Ruth. Thank you very much for that question. As part of this current effort that we are undergoing right now, the minority and women-owned business goal for this project is around 35%. Once we get out of this particular study and into the design and construction, it depends on what agency is going to actually implement the project and what that goal would be at that time. But for what we're doing right now, it's 35% of the contract that Ian and Chris are working under that would be used by minority and women-owned businesses.

Michael Morris:

Yeah. So again, supporting our environmental justice principles argued earlier, this particular effort has that response by this winning consulting team. So it's really a credit to our procurement process and a credit to this particular team. But I don't want to mislead the questioner, that doesn't necessarily translate into who actually constructs the project. So again, we're layering this over time. So our office and hiring an engineering firm felt the market could produce that type of commitment, and we were right. We have a great consulting company doing that. Tech stops, numbers for freeways, depending on where they are in the state is different than say, numbers to construct a passenger rail line. So depending on who the constructor is, there'll be a set of requirements associated with that particular entity. I'm sure you and our office will have some comment with regard to what that should be, as we maintain these principles of equity that we described earlier in the meeting.

Kevin Celt:

Thank you. Do we have any other comments or any other people waiting on the telephone for this? Well, with that, I'd like to go ahead and close the meeting then. Again, thank you everyone for participating this evening, for your time and interest. Again, please provide your comments and opinions through our website, which we've mentioned a few times on this, during this meeting. Again, your input is very valuable and welcomed for this particular project. Thank you and have a good evening.
